

Delta Pilots' Scheduling Reference Handbook

Prepared by the Delta MEC Scheduling Committee
Revision 20 October 2025

UPDATES

Updated JAN 2025:

- Added PWA citations throughout
- Updated the steps a pilot should follow if they believe that Crew Scheduling is violating the PWA or FARs
- Clarified Exceptions to “Fly Now Grieve Later”
- Clarified the ramifications of manual second-day trip coverage
- Clarified pay for reserve pilot who accepts a GS with fewer than 18 hours’ notice
- Added information on Theater Qualifications restrictions
- Added information on moving X-days with FRMS short call
- Added Reserve FAQs
- Clarification as to the meaning of a pilot’s “original rotation”
- Added 23 K. Recovery Checklist
- Added Recovery FAQs
- Added information on changes to charter and MAC rotations
- Added information on Critical Evacuation Situations
- Added a table on FAR/PWA limit buffers
- Added FAR 117 “Memory Items” to Appendix 1

Updated OCT 2025:

- Clarified information on PBS Premium Rotations
- Clarified pay if removed from a Silver Slip rotation
- Updated Proffer or Not Table
- Added information on Jetway Trades
- Added information on bidding for short call during initial line awards
- Removed details on entering reserve preferences for short call (moved to iCrew User’s Guide)
- Added information on Pilot-to-Pilot X-Day swaps
- Provided additional details on Reserve Spillover Preferences
- Provided additional details on Reserve with Conflict awards
- Provided additional details on when a reserve pilot is released to rest on their last on-call day
- Provided additional details on reroutes
- Added information on calculating reroute pay
- Clarified PWA break-in-duty provision
- Updated rotation display
- Updated vacation and CQ training pay
- Provided additional detail on placing additional vacation days and updated contact info
- Clarified information on Holiday Pay
- Updated information on Minimum Connection times
- Added information on pay for Spillover Rotations
- Provided additional details on Standby Rotations

Introduction

The *Scheduling Reference Handbook* has been developed by the MEC Scheduling Committee to provide the line pilot with a quick and easy reference to various scheduling, FAR, and Pilot Working Agreement (PWA) rules and processes. This document has been reviewed for accuracy by Delta Air Lines. This document is for reference only and is not intended to take the place of the PWA or the FARs. Those documents supersede the *Scheduling Reference Handbook* where differences exist.

The Scheduling Committee's primary role is to enforce the contract. *If* there is violation of the PWA, the Scheduling Committee will initiate a review with the Company and, if appropriate, seek a pay treatment.

Using the Scheduling Reference Handbook (SRH)

The *SRH* is a PDF document similar in format to the *Live Contract* and the *PBS Reference Handbook*, and is optimized for use on tablets, smartphones, and computers. The PDF format and bookmarking make it easy to navigate and search. As changes to our PWA and the FARs occur, they will be incorporated into the *SRH* as updates.

Hint! In many PDF reader applications, you can press and hold the CTRL key then press "F" to open a search window that will allow you to search by keywords and/or specific PWA sections. When searching for a particular PWA citation, be sure to use the standard format of Section - space - subsection - dot - space, etc. For example, 23 K. 1. d.

The *SRH* is a compilation of information from *Scheduling Alerts*, the PWA, and the FARs.

It is the responsibility of every Delta pilot to know and understand the PWA under which we work and to make every effort to abide by it. Working outside its bounds can easily result in proper steps of trip coverage being neglected, which would abrogate seniority and damage the integrity of the PWA.

Delta MEC Scheduling Committee
100 Hartsfield Centre Parkway, Suite 800
Atlanta, GA 30354

Can They Do That to Me?

If you feel that Crew Scheduling or Crew Tracking is dealing with you in a manner that violates the FARs or the PWA, you should proceed as follows:

Immediate FAR Question or Concern (Time-Sensitive)

1. Do NOT operate an aircraft until questions or concerns are satisfactorily addressed and resolved. Do not risk a violation.
2. Contact Delta Crew Scheduling or Crew Tracking and discuss the concern.
3. Contact Duty Pilot and discuss the concern
4. Call 1-800-USA-ALPA. During business hours, follow prompts to speak with MEC Scheduling Committee staff. After business hours, follow prompts to speak to the MEC's after-hours FAR 117 hotline.

Future FAR and/or PWA Question / Concern (Not Time-Sensitive)

1. Contact Delta Crew Scheduling or Crew Assist Chat to discuss the question / concern.
2. Contact Base Chief Pilot Office to discuss the question / concern.
3. Submit an STS **Inquiry** to the MEC Scheduling Committee.
Note: STS Inquiries are for future questions or concerns or general questions ONLY. Potential past violations or timecard issues should only be submitted in the form of a Report.

Past FAR and/or PWA Question or Concern or Timecard Issues (Not Time-Sensitive)

1. Contact Delta Crew Scheduling to discuss the question or concern.
2. Crew Assist Chat / Submit Crew Assist Pay Issue (as applicable).
Notes:
 - Most violations under the PWA require company notification within 120 days of the violation occurrence in order for any possible remediation to be applicable. This initial contact satisfies this requirement, regardless of whether the outcome or resolution from the interaction is to the pilot's satisfaction.
 - Certain violations also trigger pay protection for missed/affected/23 M. 7. pilot(s). If you believe this may be the case, despite a satisfactory resolution for yourself, please also submit an STS Report to the MEC Scheduling Committee so that the Committee members can verify that ALL the proper pilot(s) were paid correctly, yourself included. Reference your Crew Assist Pay Claim and the resolution to date, as applicable.
3. Contact your Chief Pilot Office to discuss the question or concern.
4. Submit an STS **Report** to the MEC Scheduling Committee.

“Fly Now and Grieve Later” Policy

Every Delta pilot needs to understand the phrase “fly now, grieve later.” The principle evolves from the Railway Labor Act of 1926 (RLA), as later amended to cover the airline industry. Like the railroads, airlines are considered vital to our national interest, as they keep commerce moving, and, in light of that, we have certain restrictions placed upon us. Congress has mandated that, when disputes arise involving interpretation or application of contract provisions, airline workers must “fly now, grieve later.”

If you are unable to resolve the issue in time, we recommend that you comply with instructions from the Company and obtain the name of any Company personnel with whom you deal. Note the exceptions to this recommendation below.

Keep a copy of all paperwork, particularly the rotation before the trip begins, at any significant interval during the trip, and at release.

Contact the ALPA Scheduling Committee when time permits via the Scheduling Ticketing System (STS) link on the Delta MEC website.

Exceptions to the “Fly Now and Grieve Later” Policy

There are certain situations in which “Fly Now and Grieve Later” does not apply. In such a situation, a pilot may have either the requirement or the option to decline an assignment, as outlined below:

- Under the FARs, you must not:
 - o Accept any assignment that you believe to be in violation of the FARs
 - o Accept any assignment for which you are not physically fit
- Under the PWA, you must not:
 - o Be scheduled or rerouted to remain on duty on an unaugmented FDP beyond 13:00 (*Section 12 D. 1.*)
 - o Continue on a rerouted rotation beyond your base (*Section 23 L. 4. c.*). If you are on a rerouted leg (one that was NOT on your original rotation) and you are arriving at your base, you are AUTOMATICALLY released from your rotation (with no recovery obligation) unless you are:
 - Rejoining your ORIGINAL rotation at your base, or
 - Deadheading to rejoin your ORIGINAL rotation, via the most direct means possible
- Under the PWA, you are not required to:
 - o Accept other than Delta One accommodations on an ocean crossing DH (*Section 8 F. 1. a.*)
 - o Accept a reroute into tag-on flying as a regular pilot (*Section 23 L. 2. b.*)
 - o Remain on duty beyond your FDP limit for non-FRMS operations (*Section 12 D. 1.*)
 - o Remain on duty more than two hours beyond your scheduled release for FRMS operations (*Section 12 D. 1. Exception two*)
 - o Remain on duty more than one hour beyond your scheduling limit when deadheading (*Section 12 D. 4.*)
 - o Accept less than contractual report to ensure minimum break (*Section 12 G. 5.*)
 - o Accept a proffer for a reserve rotation that begins in one bid period and ends in the next, if you are either a regular pilot, or a reserve pilot in a different category, in the next bid period (*Section 23 G. 10.*)
 - o Accept a white slip proffer under *Section 23 N.* or *O.* (*Section 23 P. 8. a.*)
 - o Accept a green slip or green slip with conflict proffer under *Section 23 N.* or *O.* (*Section 23 Q. 8.*)
 - o Accept an inverse assignment as a regular line holder for a rotation with a report within 11 hours of your release at your base (*Section 23 R. 7.*)
 - o Accept a yellow slip award for a rotation with a report that is within 18 hours of first attempted contact unless you are on short call (*Section 23 T. 7. a.*)

Note: A pilot bears joint responsibility with the Company for compliance with FARs. Each pilot must ensure that no FAR is violated and must resolve any doubt to their satisfaction prior to proceeding. It is not possible for the Company to indemnify a pilot against all the consequences of an FAR violation. While performing the flying in question, keep in mind your responsibility to your passengers regarding fatigue and adequate rest for yourself and your crew.

How Do I File a Scheduling Grievance?

We hear this question often, but a grievance is rarely the end result. PWA *Section 18* contains all the rules regarding the formal grievance process, but the MEC Scheduling Committee has a long-established history of resolving disputes directly with Crew Scheduling, Crew Tracking, or Crew Resources through an informal review process. If you believe the Company has violated a scheduling-related section of the PWA, we encourage you to follow these steps.

1. Maintain copies of your rotation that reflect significant changes and keep track of when those changes occurred.
2. Read the applicable section of the PWA and the Scheduling Reference Handbook to determine if a violation occurred.
3. Compile your facts and contact Crew Scheduling or Crew Tracking and ask them to explain what happened and to correct the error, if applicable. Your Scheduling Committee experts can guide you in what the proper correction should be.
4. Ask to speak with a supervisor if necessary. Please remain professional at all times, listen to any explanation given, and keep track of the individual you spoke to and when. Phone calls to Crew Scheduling and Crew Tracking are automatically recorded.
5. If you do not agree with the Company's explanation or action, contact the MEC Scheduling Committee again via the Scheduling Ticketing System (STS) link on the Delta MEC website. We will either:

- a. Determine that the Company was correct and help you to understand what happened, or
 - b. Determine there was a violation of the PWA and initiate a review with the Company.
6. A review with the Company can involve listening to phone recordings, reviewing remarks entered in the computer by Crew Scheduling, reviewing iCrew historical data (rotations or pilot schedules), discussions about PWA language and past practice, comparison to similar disputes that have been resolved, etc.
7. A review with the Company typically results in one side or the other changing its position based upon the facts presented or arguments made. There are three possible outcomes:
 - a. The Company agrees with ALPA and makes the appropriate corrections to the affected pilots' pay and schedules.
 - b. ALPA agrees with the Company.
 - c. The review ends with the parties still in disagreement.

The Scheduling Committee will communicate all the findings via email to the affected pilots.

8. If the review ends with the parties still in disagreement, then a formal grievance process can be entered at the pilot's discretion. The Scheduling Committee will transfer the handling of the dispute/grievance to the Contract Administration Committee. Other ALPA resources will be utilized as needed, and the process will follow the rules in **Section 18** of the PWA.
9. You have 120 days from the date of the incident to bring the issue to the attention of the Company.

The vast majority of all scheduling-related disputes are resolved through the informal process and do not require a formal grievance. The process is typically much faster and less expensive than a formal grievance. We hope that you never find yourself in a position that would require this process, but the Scheduling Committee stands ready to assist you and defend the contract whenever necessary.

When Have You Been Contacted?

A pilot's contact and response obligations can be broken down into several categories. A pilot has not been contacted concerning their schedule unless they have spoken personally with a Company representative, and/or has acknowledged a message via telephone, IVR, iCrew, ARCOS, or the Crew Auto Notification System (CNO).

A reserve pilot:

- on long call or short call must respond to an attempted contact by the Company as described in **Section 23 S.**
- on a layover has no obligation to respond to an attempted contact by the Company
- on an X-day has no obligation to respond to an attempted contact by the Company or to be in a position to report for an inverse assignment
- has an obligation to check their schedule no later than 30 minutes after block-in at the end of their rotation
- who is awarded flying as a result of a YS or GS award under auto-acknowledge is obligated to fly the rotation (auto-acknowledge on a YS is only possible for a notification of an award while the pilot is on duty)

A regular pilot:

- has no obligation to respond to an attempted contact by the Company at any time that they are not actually on a duty period (i.e., between report and release) except as described below for recovery obligations
- on a day off has no obligation to respond to an attempted contact by the Company, or to be in a position to report for an inverse assignment
- who is subject to a recovery obligation under **Section 23 K. 1.** and who has not reported for their original rotation and who has acknowledged their removal from their original rotation must be promptly available for contact from the report time of the original rotation for up to six hours after such report; their contact obligation may end earlier if they are assigned recovery flying or released by Crew Scheduling
- who is subject to a recovery obligation under **Section 23 K. 1.** and who has already reported for their original rotation or have not acknowledged their removal from their original rotation must be immediately available for contact for up to six hours after such report; their contact obligation may end earlier if they are assigned recovery flying or released by Crew Scheduling
- who is awarded flying as a result of an automated PCS run, a Pilot-to-Pilot Swap Board request or a Swap with Friends request must acknowledge the award and is obligated to fly the rotation; they will not be contacted to inform them of the award.
- who is awarded flying as a result of a same/next/second-day WS or GS award under auto-acknowledge is obligated to fly the rotation

Messages While Not Working

A pilot who has no contact responsibility has no obligation to respond to any message left with another person, on a communication device or service, via voicemail, or personal electronic device (i.e., text, email, etc.). They have no obligation to come to the phone when someone else answers, even if they are present at the time. They have no obligation to acknowledge any duty placed on their schedule.

Exception: A regular pilot who is awarded flying as a result of an automated PCS run, a Pilot-to-Pilot Swap Board request, or a Swap with Friends request must acknowledge the award and is responsible for such flying.

A pilot who acknowledges an award or assignment, regardless of their response obligation, has been contacted and is responsible for any such award or assignment.

Messages While Working

The Company may attempt to contact a pilot flying a rotation in a variety of ways. The manner used determines the pilot's response obligation.

- A pilot who has received a message in person from a Company employee or a representative of the

Company has been contacted and must respond.

- A pilot who acknowledges an award or assignment, regardless of their response obligation, has been contacted and is responsible for any such award or assignment.
- A pilot has no obligation to be available for contact while on layover. Messages left with hotel personnel or hotel room voicemail do not constitute contact. A pilot who is contacted while on a layover should consider the effect of interrupted rest and fatigue on their next scheduled duty period.
- ACARS messages and radio messages from the Company, if received and acknowledged, constitute contact. A pilot must judge their ability to respond according to operational demands in the cockpit, Company policy, and FARs concerning sterile cockpit procedures. However, if the crew has not acknowledged a message from the Company, a member of the crew must contact Crew Tracking after arrival at the gate. **If you are aware of an ACARS message prior to block-in but unable to view it due to operational demands, the FDP does not automatically end at block-in.**
- Pages in the airport or crew lounge and notes left in lockers or mail folders do not constitute contact.
- A reserve pilot performing their prerelease schedule check may be informed *only* of their next rotation or short-call period following a minimum 18-hour break or rest that begins as early as their release. They may not be informed of a reroute via this check.

What If I Do Answer the Phone on an Off Day?

A pilot's obligation to accept a trip on X-days or regular line off days is not absolute, whether the trip is the result of a white slip (same day or next day), yellow slip, green slip, or inverse assignment. A variety of circumstances might make accepting such a trip impossible. For example:

- Not being physically located so as to be able to report.
- Having consumed alcohol.
- Lack of available child care.
- Lack of available transportation.
- Not being adequately rested. For example:
 - A pilot, not on call, notified of an inverse assignment should consider whether they are sufficiently rested and fit for duty to accept the scheduled rotation.
 - A pilot is not permitted to accept an inverse assignment if they cannot meet the requirements of FAR 117.5 and certify fitness for duty for the assigned rotation.

Be polite but be insistent. If necessary, call your Chief Pilot.

Common Scenarios

1. *A pilot on a layover or between flights becomes aware of Crew Tracking attempting to notify them of a reroute via a telephone call, voicemail, or CNO.*
No response or acknowledgment required. A pilot on a layover or between flights has absolutely no obligation to respond to attempted contact.
2. *A pilot is walking through the airport and hears her name paged over the airport PA system.*
No response or acknowledgment required. Pages in the airport or crew lounge do not constitute contact.
3. *Upon arrival at the layover hotel, the hotel manager hands the crew a message from Crew Tracking, asking the crew to contact them about a reroute.*
No response or acknowledgment required. Messages left with hotel staff or hotel room voicemail do not constitute contact, and a pilot has no obligation to be available for contact while on a layover.
4. *A pilot voluntarily responds to a reroute notification for the next day and notifies their flying partner.*
A response or acknowledgment is required. The flying partner became officially notified of the reroute, as pilots are company employees.
5. *A crew on a layover is scheduled for a DH-only duty period the following day. While the crew is in rest, Crew Tracking reroutes them to operate a flight the next morning instead of deadheading. Crew Tracking attempts to notify the pilots via telephone and CNO.*

No response or acknowledgment is required. Pilots have no obligation to be available for contact while on a layover. Pilots contacted while on a layover should consider the effect of interrupted rest and fatigue on their next scheduled duty period. As detailed in [MEC Alert 19-33: One Phone Call](#), phone calls can be just as disruptive as fire alarms, loud guests and street noise. It is up to each pilot to determine their fitness for duty before and during every duty period.

Having not been appropriately notified of this reroute, if the crew reports at or after their scheduled report time, they have reported for a DH-only duty period. It would be an FAR violation for the crew to accept an assignment after reporting for a DH-only duty period if the assignment reroutes them into an FDP. The pilots would need to receive an additional ten hours of rest to be legal to accomplish such an assignment. However, if the crew acknowledges the reroute before their scheduled report time, or if the pilots arrive at the gate before their scheduled report time and a company employee (e.g., the gate agent) notifies them of the reroute before the report time, this would be legal under FAR 117 and response or acknowledgment is required.

You Have to Tell Someone

There are many instances in which a pilot must take a specific action and/or inform the Company in order to avail themselves of the provisions of the PWA.

Duty Time/Rest

1. Inform Crew Tracking if arrival at the layover hotel is delayed and the scheduled pickup will not provide the FAR-required eight uninterrupted hours of sleep opportunity.
2. Inform Crew Tracking if unwilling to delay report and reduce time between scheduled report and departure to achieve FAR-required rest.
3. Inform Crew Scheduling if unwilling to accept an IA with less than 11 hours break-in-duty at your base as a regular lineholder.
4. When contacted for an IA with less than ten hours' notice, consider availability and rest status and advise Crew Scheduling if unable to accept the assignment.
5. Inform Crew Tracking or Crew Scheduling if a required DOT drug/alcohol test extends your duty period beyond 30 minutes after block-in.

Lodging

A pilot who desires a hotel room must request one under the following circumstances:

1. A pilot on a rotation away from base when on the:
 - a) first layover of a rotation, provided such layover follows a deadhead-only duty period.
 - b) last layover of a rotation, provided such layover precedes a deadhead-only duty period.
2. A regular pilot assigned a break-in-duty in base as part of a reroute.
3. A regular pilot reporting for duty and assigned recovery flying that departs within the same duty period, but at least five hours after notification.
4. A regular pilot reporting for duty and assigned recovery flying departing the same day but after a break-in-duty.
5. A pilot scheduled for block-in to block-out time of more than five hours (but less than a legal break in duty) at or away from their base.

Note: If travel time to a co-terminal is part of the scheduled block-in to block out time, the pilot will be provided lodging (upon the pilot's request) if the total ground time is more than the sum of five hours plus the ground travel time under **Section 8 B. 3.**
6. A pilot who is scheduled to operate a MAC rotation, the report of which has been delayed more than five hours under **Section 23 G. 4. Note.**
7. A pilot at their base undergoing:
 - a) Qualification training,
 - b) CQ training, or
 - c) Recency training with a briefing prior to 0900 (local time).

Request must be made no later than seven days before the close of initial line bidding for the bid period in which the training is scheduled, or when the pilot is notified of their scheduled training, whichever occurs later.

Note: A pilot undergoing CQ or recency training at their base will be provided lodging only if their permanent residence is more than 50 straight line statute miles from the Training Center.

Deviation from Deadhead

1. A reserve pilot must receive permission from Crew Scheduling prior to deviating from DH at the beginning of a rotation.
2. A regular pilot deviating from DH at the beginning of a rotation must inform Crew Scheduling within the 24 hours preceding the report of the scheduled DH segment.
3. A pilot deviating from DH at the end of a rotation must notify Crew Scheduling as soon as possible after the arrival of the pilot's last flying segment prior to their scheduled deadhead. This can be accomplished via a call to the IVR or Crew Scheduling.

Reserve

1. A long-call pilot may call Crew Scheduling to request to be released at 0600 base time on the last on-call day prior to a soft non-fly day (e.g., X-day, regular-line day off), if desired. (A long-call pilot is

automatically released at 0600 base time on the last on-call day prior to a hard non-fly day (e.g., vacation, APD day, reserve PD day, ALPA, legal duty, MLOA, or golden X-day).)

2. A long-call pilot must inform Crew Scheduling ***at the time they are notified*** of a scheduled conversion to short call if they will be unavailable for contact during the first two hours of their short-call period.
3. A regular pilot who flies a rotation into X-day(s) as a result of a month-to-month transition may call Crew Scheduling to have the X-day(s) moved so as to begin on the first uninterrupted day.
4. A long-call pilot should inform Crew Scheduling if unwilling to accept a YS award with less than 18 hours' notice.

Reroute

1. Advise Crew Tracking if unable to accept a reroute due to an FAR or PWA conflict.
2. Advise Crew Scheduling when a reroute will cause a conflict with a scheduled vacation or other hard non-fly day (e.g., vacation, APD day, reserve PD day, ALPA, legal duty, MLOA, or golden X-day).

Timeline of Scheduling Events

Current Month Events Affecting Subsequent Bid Period

Day of Calendar Month	Event
At 0800E on the 1 st	Vacation move-ups close
Before 1800E on the 4 th	Bid packages distributed electronically Vacation move-ups posted Qualification training posted CQ training posted Asterisk rotation changes posted
Before the 5 th day of the month that is two months prior to the bid period in which a pilot may be scheduled for qualification training	Pilot requests any desired days free of duty prior to or during their training
Before 1800E on the 11 th	Pilot advises Crew Scheduling of known absence (e.g., MLOA, scheduled accident leave, scheduled sick leave) in subsequent bid period Pilot advises Crew Scheduling of their option regarding a vacation move-up award for the subsequent bid period that conflicts with an asterisk rotation originating in the current bid period
On the 11 th @ 1800E	Line bidding closes.
On or before the 17 th @ 1800E	FAR and PWA time and duty adjustments completed (line adjustment) Adjusted lines made available for viewing in iCrew
On the 19 th @ 0800E	Reserve Golden Day bidding closes
Before 1800E on the 19 th	Reserve Golden Day award available for viewing in iCrew
Before the 20 th	Pilot requests any desired days free of duty during their OE training in the next bid period
On the 20 th @ 0700E (and through the end of bid period at all PCS run times)	Daily next bid period PCS process begins
Before the 21 st day of the month that is two months prior to the bid period in which a pilot may be scheduled for CQ	Pilot designates CQ golden day(s), if any Pilot advises Crew Resources (via iCrew) of training unavailability in the bid period following the subsequent bid period
Before 1800E on the 24 th	Pilot advises Crew Scheduling if they have been awarded an RLL line and desire a line guarantee with recovery obligations
Before 0800E on the 25 th	Available vacation move-ups posted
Before 1800E on the 25 th day of the month that is two months prior to the bid period for which CQ training events are being awarded	CQ training events published
At 1800E on the 25 th day of the month that is two months prior to the bid period for which CQ training events are being awarded	CQ bidding opens
At 1800E on the last day of the bid period that is two bid periods prior to the bid period for which CQ training events are being awarded	CQ bidding closes
At 2359E on the last day of the bid period	Deadline for submitting bank transactions (for the current bid period)

Daily Events Affecting Current Bid Period

Time of day	Event
No earlier than 0700E	PCS run time for second day for all PCS awards PCS run time next day for PCS awards other than rotation coverage (e.g., military leave, IVD, APD, PD, X-day move, swap with the pot, additional day off)*
No earlier than 0700E, 1200E, 1700E, and 2200E	PCS run time beyond second day for all PCS awards PCS run time second day for PCS awards other than rotation coverage (e.g., military leave, IVD, APD, PD, X-day move, swap with the pot, additional day off)*
Between 0800 base time and 2400 base time	Second-day rotation coverage
As it becomes known to Crew Scheduling	Same/next-day rotation coverage
0001E and 1300E	Automated RAW value update
1200 base time	Deadline for placing assignment on the line of a reserve on the last non-fly day (that ends at 2400) prior to an on-call day. (Section 23 S. 2. a. 5) Note one, 2. c. 3) Note one, and 5. d. 2) b)))
No later than 0800E	Publishing of available short call reserve periods for the next day
No earlier than 1100E	Next day short call reserve YS submission closes
No later than 1200E	Next day short call reserve awards posted

*Subject to **Section 23 I. 13.**

Note: Current bid period PCS will be run as close as possible to, but not earlier than, scheduled PCS run times and will process all pilot requests submitted prior to the beginning of the run. Subsequent bid period PCS runs will begin as close as possible to, but not before, current bid period PCS runs and will process all pilot requests submitted prior to the beginning of each run.

Monthly Bidding Process

PBS Line Count Calculation (23 A. 43.).....	13
PBS Line Construction Window (LCW) (23 A. 25.)	14
Monthly and Continuous 12-Month Blank Lines (LOA 20-03)	15
Monthly Award Process	15
Line Management	15
Pay.....	15
Qualification Training	16
Early Return from CBL	16
Reduced Regular Lines (RRL) (LOA 20-03)	17
Reduced Lower Limit (RLL) Lines (23 D. 11. Exception).....	18
Benefits of the RLL	18
RLL Eligibility	18
Bidding for an RLL	19
Modifying an RLL	19
PBS Premium Rotations (PBSPR) (23 D. 9. Note & 23 U. 12.)	21
X Days—How Many Do I Get? (12 M. 2. & LOA 20-03).....	22
Reserve Pay for Bid Periods Including Known Absences (23 Y. 3.)	24

PBS Line Count Calculation (23 A. 43.)

Every month, the Company estimates the number of regular and reserve lines in each category for the subsequent bid period and publishes the number of regular line under “PBS Line Counts” on the Crew Resources and Scheduling page. Each regular line count is a projection based on the following formula:

$$\frac{\text{Block} + \text{Credit} + (\text{VTS} \times 85\%)}{\text{ALV}}$$

- Block plus credit—includes the total amount of scheduled block and credit time in the category
- VTS—represents all known absences
- Regular line pilots typically account for approximately 85% of known absences.
Note: this value may be adjusted in the future if the distribution of known absences shifts.
- The sum is then divided by the ALV to determine the *projected* number of regular lines.

Example:

In a given bid period, a category has an ALV of 75 hours and contains:

- 210 pilots
- 10,000 hours of block
- 2,000 hours of credit
- 1,500 hours of known absences (VTS)

Applying the formula described above, $[10,000 + 2,000 + (1,500 \times .85)] \div 75 = 177$

The formula projects 177 regular lines for the category. With 210 pilots in the category, there are therefore 33 projected reserve lines (16%).

PBS Line Construction Window (LCW) (23 A. 25.)

The PBS LCW is +/- 10 hours of the ALV, but no higher than 91:30 for narrowbody and 7ER categories and 92:30 for widebody categories other than 7ER.

This will allow PBS to award a line worth less than 65:00 (the regular line guarantee) whenever the ALV is less than 75:00. A pilot who is awarded such a line will retain their regular line guarantee of 65:00. For example, were a pilot to be awarded a regular line of time worth 62:00, they would nonetheless be guaranteed to be paid no less than 65:00. (4 B.)

Any additional flying the pilot performs as pay and credit would first be applied to satisfy this line guarantee. For example, were they now to be awarded a rotation worth 6:00, the first 3:00 would be applied to their regular line guarantee with the remaining 3:00 paying above the guarantee.

On the other hand, were a rotation to be removed from the pilot's line with no pay, whether due to line adjustment, PD, APD, IVD, or swap, the pilot's line guarantee would be reduced by the same amount. For example, suppose the pilot above drops a rotation worth 10:30 via their PD, their pay and credit would be reduced to 51:30 and their regular line guarantee would be reduced as well to 54:30.

Only the pay and credit portion of a rotation's value under **Section 12 L. 1.** will apply to the LCW. Any pay, no credit due under Holiday, ADG Carveout, or Sit pay will not apply to the LCW.

Monthly and Continuous 12-Month Blank Lines (LOA 20-03)

The Company has the option of proffering Monthly Blank Lines (MBL) and/or Continuous 12-Month Blank Lines (CBL) for any given bid period.

Monthly Award Process

The Company will post available MBLs and CBLs each month in conjunction with the next month's bid package. A pilot who desires either type of line will bid accordingly in PBS.

While the Company is not required to make MBLs or CBLs available in any given category, it will award all such positions posted, to the extent of available bidders. The Company may not inversely assign pilots to either type of line.

Please see the PBS Reference Handbook for details on bidding for an MBL or CBL.

Line Management

A pilot on an MBL or CBL is eligible to participate in all aspects of PCS and the Pilot to Pilot Swap Board, with the exception of beyond-next-day WS. They can pick up rotations from other pilots on the Swap Board and swap those trips for others via Swap with the Pot. They are eligible to be awarded a GS and to be inversely assigned to a rotation.

However, an MBL or CBL holder is not eligible to be awarded beyond-next-day WS rotations via PCS. The only WS award for which such a pilot is eligible is a same/next/second-day in-base WS, and at a lower step of trip coverage, i.e., after reserves but before green slips.

Flying awarded as single pay and credit (except from a carry-in trip) will be offset against the pilot's MBL or CBL guarantee.

Pay

A pilot that holds an MBL receives a line guarantee of 25:00 pay and credit. The line guarantee of a CBL is 35:00 pay and credit. In addition to their guarantee, a pilot holding either type of line is paid for the in-period portion of a carry-in trip, their training, vacation, and any premium pay that they are due (GS, IA, reroute, etc.).

However, the value of any flying that the pilot picks up at single pay and credit, except for a carry-in trip from the prior bid period, is offset against their line guarantee. Delta will pay the pilot the greater of the MBL or CBL guarantee or their accumulated pay and credit for the month. A pilot may withdraw or borrow from their full-service bank to increase their total compensation for the bid period.

Example 1

A pilot is on an MBL with a guarantee of 25:00.

- If they are awarded a single 21-hour trip via PCS or the Pilot-to-Pilot Swap Board, they will receive the line guarantee of 25:00
- If they are awarded two trips via PCS or the Pilot-to-Pilot Swap Board with a total value of 42:00, they will receive 42:00 of pay for the bid period

Example 2

A pilot is on a CBL with a guarantee of 35:00. The pilot has a week of vacation and the last two days of a carry-in trip with an in-period value of 8:00 hours.

- If the pilot picks up no other flying, they will receive **75:05** of pay for the bid period (35:00 guarantee + **32:05** vacation + 8:00 carry-in)
- If a pilot is inversely assigned to a two-day trip worth 11:00, they will receive **97:05** of pay for the bid period (35:00 guarantee + **32:05** vacation + 8:00 carry-in + 22:00 inverse assignment pay)
- If a pilot is awarded a GS for a two-day trip worth 11:00 and the premium pay trigger is 71:00 or less, they will receive **97:05** of compensation for the bid period (35:00 guarantee

- + 32:05 vacation + 8:00 carry-in + 22:00 GS pay)
- If a pilot is awarded a GS for a two-day trip worth 11:00 and the premium pay trigger is greater than 71:00, they will receive 75:05 of pay for the bid period (35:00 guarantee + 32:05 vacation + 8:00 carry-in); because the pilot has not reached the premium pay trigger, the GS award will trigger single pay and credit, offset against their line guarantee

Qualification Training

A pilot may undergo CQ or recency training or perform their distributed training while on an MBL or CBL and will receive pay, no credit for such training in addition to their guarantee.

However, Delta will not award an MBL if a pilot is:

- scheduled for qualification training during the bid period, or
- NOT scheduled to have completed OE/TOE or consolidation before the start of the bid period.

A pilot will not be awarded a CBL if they are:

- scheduled for qualification training during the first month of the CBL, or
- have begun qualification training and are not scheduled to have completed OE/TOE or consolidation before the start of the CBL.

A pilot with qualification training scheduled to begin sometime during the 12-month footprint of a CBL in other than its first month has two options:

- Have the CBL terminate at the end of the bid period in which the qualification training begins. All training accomplished in this bid period will be paid in addition to the pilot's 35-hour guarantee.
- Postpone qualification training until the conclusion of the CBL. Pilots selecting this option will still convert according to their seniority under **Section 22 E.** or **F.** of the PWA. They will remain on their CBL for the remainder of its 12-month term unless returned early by the Company.

Early Return from CBL

Throughout the 12-month term of a CBL, the Company retains the right to return the pilot to a normal schedule with a 60-day notification. Such a recall will first be proffered in seniority order to pilots in a given category and then inversely assigned in such category, in both cases, without regard to the remaining lengths of each applicable pilot's 12-month CBL term.

For example, suppose the Company desires to recall 12 of the 20 pilots currently holding a CBL in the ATL 7ER A category. In that case, they will first solicit volunteers in seniority order from among the 20 CBL holders before requiring any, in inverse seniority order, to return. Such recall notice would be sent in written form to the pilot's address of record in DBMS no later than 60 days before the first day of the bid period in which the Company wishes the pilots to return.

Reduced Regular Lines (RRL) (LOA 20-03)

At its discretion, the Company may offer RRLs to pilots in overstaffed categories for a given bid period. An RRL is a regular line that was constructed in PBS with a targeted ALV that is 80% of the established ALV for that category's position. A pilot may submit their preference for an RRL within their monthly bid in PBS.

RRLs will be awarded by seniority order within a category. While under no obligation to offer RRLs in any given category, the Company will award all of the RRLs it makes available for bid, provided there are sufficient bidders. No pilot may be involuntarily assigned an RRL.

Example: The Company offers 12 RRLs in a given category. If at least 12 pilots in that category bid for an RRL in PBS, the 12 most senior such pilots will each be awarded an RRL. If fewer than 12 pilots in that category bid for an RRL, each will be awarded an RRL and the remaining RRLs will be unawarded.

Suppose the established ALV in a category in which RRLs are offered is 75:00. A pilot who volunteers to bid for an RRL will be awarded a line with a target ALV of 80% of 75:00, or 60:00. The line construction window (LCW) for this pilot's RRL award will be +/-10 hours of the reduced ALV, meaning that the pilot may receive a line valued between 50:00 and 70:00.

An RRL-holder is a regular pilot in all aspects other than their initial line value. They may participate in PCS and the Pilot to Pilot Swap Board at their discretion, and they carry their category's normal WS pickup limit and premium pay trigger.

Reduced Lower Limit (RLL) Lines (23 D. 11. Exception)

A reduced lower limit (RLL) line is a regular line with a value between zero and the lower limit of a pilot's line construction window (LCW). An RLL is only an option for a pilot for whom PBS is unable to award a regular line within the normal LCW and whose seniority places them at or above the RLL limit. RLLs are more common on widebody fleets but can occur on narrowbody fleets with the right set of circumstances.

A pilot who cannot hold a regular line could bid for an RLL as an alternative to bidding for reserve. An RLL will be made up of some combination of trips awarded through PBS, trips picked up from open time, recovery days (which differ somewhat from reserve on-call days), and trips assigned during those recovery days. RLLs are detailed in **Sections 23 D. 10. And 17.**

Benefits of the RLL

An RLL could be advantageous to a pilot in either a widebody or narrowbody category.

Example 350

DTW 350 has an ALV of 73:00. The LCW is 63:00 to 83:00.

When PBS gets to Captain Delta the only remaining trips are worth 28:44 each.

Result

Three of these trips would result in a line worth 86:12, over the LCW. Two of these trips would result in a line worth 57:28, under the LCW. PBS would be unable to award the pilot a regular line.

Bidding for an RLL

An RLL would allow two trips worth 28:44 to be awarded, resulting in a line worth only 57:28. The pilot could accept the line worth the lower value and white slip the third trip (the pickup limit is 88:00 [ALV+15] in this case), resulting in a final line value of 86:12.

Note: The pilot could elect to have recovery days added to their schedule instead of picking up additional flying from open time.

RLL Eligibility

Any pilot may bid for an RLL, but only a pilot whose seniority is above a specified minimum seniority within their category will be eligible for an RLL award. Pilots can determine their position within their category from month to month by referencing the Info tab in PBS. A pilot's position on the list may change before PBS bids are processed.

**** RLL and projected regular line count are the same value**

Parameters for February 2017

February 2017 has 30 days

Category	ALV	LCW		RES GUAR	RES RULE	EXTRA XDAY	RLL LIM
		LOW	HIGH				
ATL 777 A	71:00	65:00	78:30	72:00	4-99-3	No	157
ATL 777 B	71:00	65:00	78:30	72:00	4-99-3	Yes	160
ATL 330 A	72:00	65:00	79:30	72:00	4-99-4	Yes	92
ATL 330 B	71:00	65:00	78:30	72:00	4-99-4	Yes	144
ATL 765 A	71:00	65:00	78:30	72:00	4-99-4	Yes	70

You will notice the last column labeled RLL LIM has a value representing the projected regular lines

and the cutoff value for RLL. After the category list is published and before PBS bid awards, there is always the possibility of pilots returning to and/or leaving the category. If a pilot is a few numbers above the RLL LIM value, we recommend they include an appropriate reserve bid group in their PBS bid to protect against a number of more senior pilots returning to the category and effectively pushing them below the RLL cutoff. Alternatively, it is possible that a pilot who finds themselves slightly below the RLL cutoff could move up on the category list if more senior pilots leave the category, thereby making the pilot eligible to be awarded an RLL line if PBS is unable to award the pilot a line within their LCW.

Bidding for an RLL

PBS will not automatically award an RLL. The pilot must opt to bid for an RLL, if desired. Only if you are willing to be awarded a line of time that is below normal should you use the RLL option. A pilot may not indicate a minimum line value in an RLL bid group.

You bid for an RLL line of time by entering an RLL bid group. Because PBS will attempt to award you an RLL schedule ***only if it cannot award you a line of time within the normal LCW***, it is necessary that you place your RLL bid group below every normal pairings bid group in your bid and only after an unconditional pairings bid group. This ensures that PBS has considered every possible combination of rotations available to you to award you a line of time within the normal LCW before attempting to award you an RLL line.

Please see the PBS Reference Handbook in the ALPA folder on your EFB for details on how to bid for an RLL.

Modifying an RLL

A pilot who has been awarded an RLL line in PBS may begin to modify their line via the SWAP board as soon as schedules are released in iCrew. Starting with the first PCS run on the 20th of the month for the next bid period, a pilot can modify their schedule. Such pilot then has two options:

1. Accept the awarded line and any modifications with no regular line guarantee. Note: This is the default option. No further action is required by the pilot.
2. No later than 1800E on the 24th, they may **accept the awarded line and any modifications with a regular line guarantee equal to the lower limit of their LCW, and then remain available for assignment to recovery flying**. The number of days of availability will be determined by dividing the difference between the pilot's guarantee and their projection by a reserve pro rata share and rounding up. These days will be placed on their line by mutual consent and in a single group, if possible. If the pilot and the Company cannot agree on placement of the days, the Company may place the days at its discretion.

After the 2200E PCS run on the 24th of the month, Crew Scheduling will place assigned recovery days on the pilot's schedule and may begin assigning open time per Section 23 D. 19.

Recovery flying assignments are different from reserve flying assignments and follow a separate set of rules. Any recovery flying assigned by the Company must meet the following criteria:

- Must report at least 24 hours from initial notification attempt
- Must report on a recovery day
- May release up to three days after the last recovery day
- Is not limited to one rotation

A pilot is obligated to fly an RLL recovery assignment whether they acknowledge the rotation or not.

A pilot whose line contains RLL days of availability may adjust their schedule via PCS and/or the Pilot-to-Pilot Swap Board without regard to their days of availability. An increase in the pilot's projection will trigger a recalculation of the number of days of availability and any excess days will be removed from their schedule, beginning with the earliest of such days. A decrease in the pilot's projection will cause a corresponding decrease in their RLL line guarantee.

Example

Assumptions:

Pilot is awarded an RLL line with a value of 48:00 ALV 78:00 (LCW 68:00 - 88:00)

Result:

If the pilot accepts the awarded line with a line guarantee of 70:30, six days of availability will be placed on their line, calculated as follows:

Reserve guarantee is 76:00 (78:00 - 2:00)

The reserve pro rata share is 4:13 (76:00 ÷ 18)

$(70:30 - 48:00) \div 4:13 = 5.3$, rounded up to six days of recovery obligation

PBS Premium Rotations (PBSPR) (23 D. 9. Note & 23 U. 12.)

The Company may designate individual rotations in the bid packet as “Premium,” designating PBS Premium Rotations (PBSPR). A pilot who is bidding for a regular line may bid for these rotations in PBS.

A PBSPR awarded via PBS will generate single pay and credit, plus one half pay, no credit, so long as it is flown by the pilot to whom PBS awarded the rotation. The one half pay, no credit will be in addition to any other pay due, such as holiday pay, and only the single pay and credit will apply toward the pilot’s LCW and subsequently to their projection for purposes of full service bank, the WS pickup limit, and the GS trigger.

If a PBSPR is not awarded during the initial line award process, it will remain in open time like any other unbid rotation, and the PBSPR designation will be removed. The trip will remain as regular open time, and be awarded via the existing PCS process or manual trip coverage under **Section 23 N. or O.** If a pilot drops their awarded PBSPR via a PD, APD, or IVD, that rotation will also lose its PBSPR designation.

In no case may a pilot swap with the pot out of an awarded PBSPR or give it to another pilot via the Pilot to Pilot Swap Board.

X Days—How Many Do I Get? (12 M. 2. & LOA 20-03)

The number of X-days and golden X-days a full reserve line (other than a ULC reserve line) will receive in PBS depends upon the reserve guarantee, reserve staffing for the bid period, and the number of reserve days in the bid period, as shown in the tables below. The number of reserve days is the total number of days in the bid period (30 or 31) minus the total number of days of planned absence (vacation, training other than CQ, MLOA, etc.).

A reserve pilot (other than a ULC reserve pilot) in a category in which the number of reserve lines is projected to be at least 20 percent of the number of pilots in such category will be awarded one more X-day than the number shown in the tables.

To determine the number of X-days a reserve pilot (other than a ULC reserve pilot) is eligible for:

1. Determine the pilot's number of reserve days/Use the chart appropriate for the reserve guarantee and the column appropriate for the length of the bid period to determine the number of X-days
2. Add one X-day to the number shown in the table if the projected reserve staffing is at least 20%

X-days in a bid period with a reserve guarantee of 72:00-74:59

# of reserve days in a 30-day bid period	# of X days in a 30-day period	# of reserve days in a 31-day bid period	# of X days in a 31-day bid period

Reserve Pay for Bid Periods Including Known Absences (23 Y. 3.)

The examples below assume a 30-day bid period, an ALV of 75:00, a reserve guarantee of 73:00, the pilot is not an ULC reserve pilot, and the following daily rates for absences on a reserve line:

1. Vacation: 4:35 pay (see *Section 7 G. 2.*)
Note: All vacation time is considered for line construction purposes for PBS.
2. CQ Training: 5:00 pay, no credit (see *Section 11 B. 2. A.*)
3. Qualification training: 3:05 pay and credit for all days (including designated off days during the training) that training is on their schedule (see *Section 11 B. 1. B.*)
4. Known sick leave: the greater of a pro rata portion of the reserve guarantee, or a reserve pro rata share for each on-call day during their shadow bid period.
5. Unpaid leave of absence: none (see *Section 13 J. 2. C.*)
6. Jury Duty: 5:15

Example 1—Pilot has seven days of vacation in the bid period.

Results:

1. Pilot receives ten X-days (11 if projected reserve staffing is at least 20 percent), of which five are golden X-days.
2. Pilot's reserve guarantee is reduced by $1/30^{\text{th}}$ for each day of their vacation ($73:00 - [7/30 \times 73:00] = 55:58$ adjusted reserve guarantee for the bid period.
3. Pilot is paid $7 \times 4:35 = 32:05$ for the vacation in addition to any other pay for the bid period.
4. If the pilot does not perform any flying, they will be paid $55:58 + 32:05 = 88:03$.

Example 2—Pilot is scheduled for two days of CQ training.

Results:

1. X-days are not prorated for CQ training. Pilot receives 13 X-days (14 if projected reserve staffing is at least 20 percent), of which 6 are golden X-days.
2. Pilot's reserve guarantee is reduced by $1/30^{\text{th}}$ for each day of their CQ training ($73:00 - [2/30 \times 73:00] = 68:08$ adjusted reserve guarantee for the bid period.
3. Pilot is paid $2 \times 5:00 = 10:00$ for the CQ training in addition to any other pay for the bid period.
4. If the pilot does not perform any flying, they will be paid $68:08 + 10:00 = 78:08$.

Example 3—Pilot is scheduled for 16 days of qualification training.

Results:

1. Pilot receives six X-days (seven if projected reserve staffing is at least 20 percent), of which three are golden X-days.
2. Pilot's reserve guarantee is reduced by $1/30^{\text{th}}$ for each day of their qualification training ($73:00 - [16/30 \times 73:00] = 34:04$ adjusted reserve guarantee for the bid period.
3. Pilot is paid and credited $16 \times 3:05 = 49:20$ for the qualification training in addition to any other pay for the bid period based on a pro rata ALV ($75:00/30 = 2:30$).
4. If the pilot does not perform any flying, they will be paid $34:04 + 49:20 = 83:24$.

Example 4—Pilot has 15 days of known sick leave beginning on the 16th day of the bid period.

The pilot will be awarded a normal reserve line of time, and the period of known sick leave will be a shadow period. The pilot will be paid and credited the greater of:

- a. a reserve pro rata share for each on-call day during the known sick period, or
- b. a pro rata portion of the reserve guarantee for each day during the known sick period.

Assume, for example, the pilot is awarded seven X-days before and six X-days during their known sick period. The pilot will retain their normal reserve guarantee, and will be paid and credited 38:39, from their sick bank, which is the greater of:

- a. $9 \times (73:00/17) = 38:39$, or
- b. $15/30 \times 73 = 36:30$.

The pay and credit for the period of known sick will be applied against the pilot's guarantee. If the pilot does not perform any flying, their total pay will be 73:00.

Example 5—Pilot is scheduled for ten days of military leave.

Results:

1. Pilot receives nine X-days (ten if projected reserve staffing is at least 20 percent), of which four are golden X-days.
2. Pilot's reserve guarantee is reduced by $1/30^{\text{th}}$ for each day of their military leave. $(73:00 - [10/30 \times 73:00]) = 48:40$ adjusted reserve guarantee for the bid period.
3. If the pilot does not perform any flying, their total pay will be 48:40.

Regular Line Adjustment Process

FAR and/or PWA conflicts may arise when a pilot's current line of time changes during the period of time between when the PBS bids close, and when the PBS lines are awarded (the bid award window).

Shortly after the PBS bids close, a snapshot of a pilot's current line is taken. This snapshot is taken just prior to the beginning of the PBS processing of that pilot's category and will include the results of any PCS runs that occurred after the bids closed, but prior to the time that the snapshot was taken. A line will then be built that maintains FAR and PWA compliance with the pilot's line as it exists in the snapshot. Any changes to a pilot's line from the "snapshot" line that occur prior to the completion of the PBS award are not accounted for in the pilot's preliminary award. This can create a violation that must be reconciled prior to the pilot's line being released into iCrew. Reconciliation must be completed no later than 1800E on the 17th of each month.

This reconciliation, known as the *line adjustment process*, is defined as: the process by which the Company **removes** a rotation(s) from a regular pilot's line for the next bid period that would otherwise create an FAR and/or PWA conflict(s). (23 A. 24.)

Line Adjustment Pay Guarantee or Lack Thereof (23 G. 6.)

Rotation guarantee for rotations removed during the line adjustment process is driven by whether the conflict was due to an assignment or an award.

If a rotation on a pilot's future month line is removed as a result of the line adjustment process, and the removal was required because, sometime during the time of the bid award process, he:

- was rerouted into additional block or duty,
- was inversely assigned a rotation,
- was assigned a reserve rotation, or
- over flew their block or duty,

that pilot will receive rotation guarantee with a corresponding recovery obligation.

If the line adjustment removal was required as a result of:

- a WS/YS or GS award,
- Swap with the Pot,
- The Pilot-to-Pilot Swap Board, or
- a rotation buy,

then the conflicting trip is removed without pay guarantee. In other words, the pilot requested the additional flying, which is in their control and not the Company's.

After a line of time has been made legal, any later adjustment due to an FAR violation will entitle a pilot to the rotation guarantee and possibly subject them to **Section 23 K.** recovery flying.

See the *iCrew User's Guide* published separately in the ALPA folder of AeroDocs on your EFB for a detailed explanation of how to enter various PCS requests.

Definitions (23 A.)

“Green slip” (GS) means a request by a pilot to be assigned same/next/second-day open time that may generate premium pay:

- on their regular line days off,
- on their reserve line X day(s),
- on reserve line on-call days, while on long-call, with less than 18 hours’ notice, or
- on their remaining reserve line on-call days in the current bid period after they have accumulated credit equivalent to the ALV in such bid period.

“Green slip with conflict” (GSWC) means a request by a regular pilot to be assigned same/next/second-day open time that may generate premium pay, and:

- overlaps a scheduled rotation(s) remaining to be flown, or
- creates an FAR or PWA conflict with a scheduled rotation(s) remaining to be flown.

“Inverse assignment (IA)” means the assignment of open time in inverse seniority order under **Section 23 N.** or **O.**

Exception: An assignment to a reserve pilot who is among a group of reserve pilots whose RAW values are in the same RAW value grouping under **Section 23 A. 40.** And **Section 23 S. 1. A. Note two** is not an IA.

“Inverse assignment with conflict” (IAWC) means an IA that:

- overlaps a scheduled rotation(s) remaining to be flown, or
- creates an FAR or PWA conflict with a scheduled rotation(s) remaining to be flown.

“Open time” means a rotation(s) not awarded on a regular line in the initial line awards, or that otherwise becomes available.

“Pilot change schedule” (PCS) means a process for the submission of requests for:

- a. military leave of absence (see **Section 13 D.**)
- b. personal drop (PD), qualified personal drop (QPD), individual vacation day (IVD), and authorized personal drop (APD) (see **Section 23 I.**)
- c. swap with the pot (see **Section 23 H.**)
- d. white slip (see **Section 23 P.**)
- e. yellow slip (see **Section 23 T.**)
- f. GS and GSWC (see **Section 23 Q.**)
- g. X-day move (see **Section 12 M. 8.**)
- h. additional day off (see **Section 23 S. 16.**)
- i. recovery slip (see **Section 23 J.**)

“Premium pay” means pay as set forth in **Section 23 U.** applicable to:

- an inversely assigned rotation or flight segment(s).
- a GS rotation.
- a GSWC rotation.

“White slip” means a request by a regular pilot to be awarded open time under **Section 23 P.**

- A Captain may be awarded a rotation for which they lack special airport/route qualification via WS, Swap with the Pot, the Swap Board provided it is at least 96 hours prior to the report time.

“Yellow slip” means a request by a reserve pilot to: a. become first in sequence for an assignment to a specific rotation or on a specific date, b. become first in sequence for conversion to short call at a specific time or on a specific date, or c. be awarded up to two additional on-call days. Yellow slips are

further outlined in *Section 23 T*.

The Pilot Change Schedule (PCS) System (23 E.)

Open time awards/assignments are made based on the coverage steps outlined in PWA *Sections 23 E., M., N., and O*. All beyond-second-day awards are processed automatically in PCS four times daily - no earlier than 0700E, 1200E, 1700E and 2200E. PCS will also automatically process awards other than white slips for second day coverage. Note that each automated PCS run is manually initiated by Crew Scheduling, and these runs will at times occur somewhat later than the scheduled times.

Crew Scheduling will not notify a pilot of a beyond-second-day award - the pilot is responsible for ascertaining whether or not they have received such an award and acknowledging it.

A pilot may also request to be awarded a white slip for second-day flying or swap with the pot award for next-day flying on the applicable 0700E PCS run by so indicating in their PCS request. Again, they are responsible for determining whether or not they have been awarded a rotation.

At **0800 pilot base time** two days prior to report, Crew Scheduling will begin manually awarding/assigning open time, i.e., second-day open time, under *Section 23 N.* and *O*. This means that it is therefore possible for the same rotation to be in a queue to be covered in two different ways - swap with the pot and manual trip coverage.

For example, suppose a pilot submits a swap with the pot request for a rotation that reports in two days, i.e., second-day flying, at 0900E in time for the 1200E PCS run. Under the manual second-day coverage steps, Crew Scheduling will already be in the process of implementing the steps of trip coverage under *Section 23 N.* for that same rotation. It is therefore possible that the rotation will have been awarded manually by Crew Scheduling prior to the initiation of the 1200E PCS run. If this occurs, the swap with the pot request that rotation will be denied, because the rotation will no longer be in open time.

It is also possible for a pilot who submits a WS request at 0900E for a rotation in second-day open time to see that rotation awarded as a swap with the pot to another pilot, possibly more junior, on the 1200E PCS run in the event that Crew Scheduling has not yet completed the WS step in manual trip coverage.

Automated PCS runs process requests in the following order:

- a. IVD (see *Section 23 I.*)
- b. APD (see *Section 23 I.*)
- c. PD (see *Section 23 I.*)
- d. X-day moves (see *Section 12 M. 8.*)
- e. recovery slips (see *Section 23 J.*)
- f. white slips (see *Section 23 P.*)
- g. Swap with the pot (see *Section 23 H.*)

For each scheduled PCS run, the system will first consider any IVD requests in seniority order within a category, then any APD requests in seniority order, then PDs, etc. When it gets to the swap with the pot step, PCS will run through all swap with the pot requests once and if there was an award the system will do another pass. PCS will then run this entire process a second time.

The awards/assignments of same/next/second day rotations under *Section 23 N.* and *O*. are made in order beginning with step 1. If there are no available pilots in a given step, the coverage will continue with the next subsequent step. During daily trip coverage under *Sections 23 N.* and *O.*, and at any step in the coverage, the Company may choose to NOOP the rotation and split the flying into separate rotations. Each of the separate rotations must then be awarded/assigned according to the steps of *Sections 23 N.* or *O.*, as appropriate, starting from step 1.

PCS Request Qualifiers

PCS allows you to make general WS, GS, and GSWC requests using a range of dates over which you are willing to fly and provides you with the ability to describe the types of rotations you would be willing to accept VIA PCS Request Qualifiers. It also allows you to indicate your preference to auto-accept proffered rotations during the ARCOS “offer window” (to eliminate late-night nuisance calls) and to auto-acknowledge trip awards during the ARCOS “award window” for trips that report more than 12 hours from the call. Because a pilot who selects one or both of these options is expected to maintain awareness of trip coverage and/or, if awarded a rotation be obligated to fly an awarded rotation, it can be highly advantageous to make full use of the various PCS Slip Request Qualifiers available when entering a WS, GS, or GSWC request.

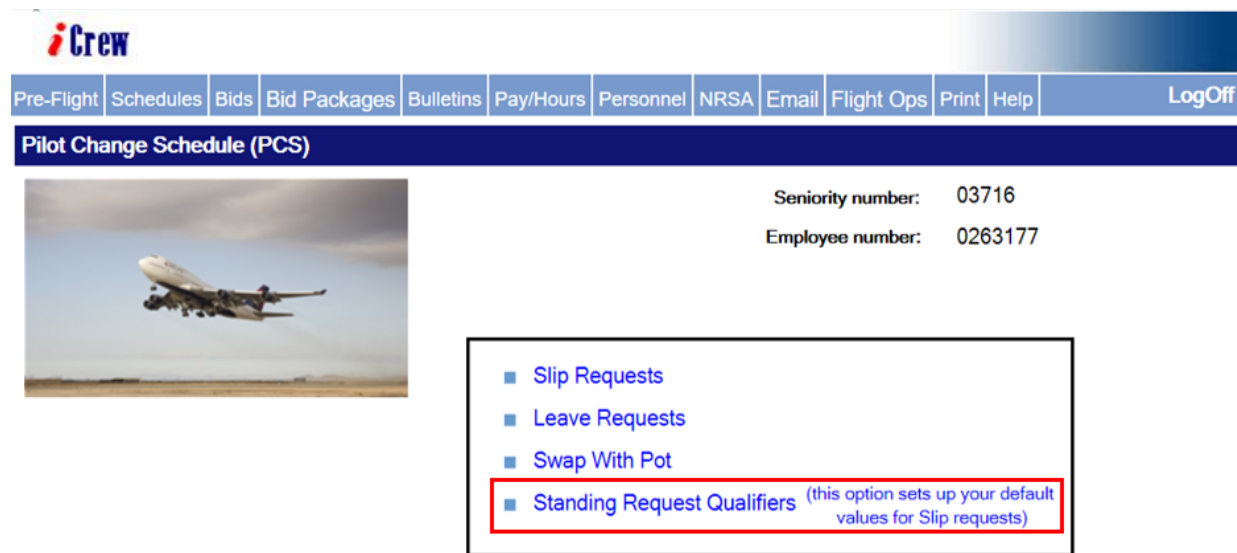

General

PCS Slip Request Qualifiers apply whenever you have entered a range of dates on your WS, YS, GS, or GSWC request, as opposed to having entered a request for a specific rotation number. These qualifiers can be used to describe the types of rotations for which you request to be considered with respect to value, length, times of day, layover, deadheads, etc.

Whenever you enter a WS, YS, GS, or GSWC request using a date range, iCrew will bring up a menu of options of qualifiers that you may use to further detail the types of rotations in which you are interested and/or rank potential rotations by certain criteria. Most, but not all, of the qualifiers that you can set apply both to WS requests through the automated PCS system for beyond-second-day flying and to WS, YS, GS, and GSWC requests for same/next/second-day flying processed manually by Crew Scheduling, whether awarded through ARCOS or directly by the scheduler.

Standing Request Qualifiers

PCS Qualifiers may be set globally to apply by default to all slip requests you later enter, or they may be set as desired for an individual slip request. To set your PCS Qualifiers globally, navigate to the PCS menu in iCrew and select Standing Request Qualifiers, as shown below.

Once set or amended, your Standing Request Qualifiers will apply to any slip request you subsequently submit for flying over a given set of dates. Any changes you’ve made will NOT, however, apply to a slip request you submitted prior to setting or amending your Standing Request Qualifiers, nor will they apply to a slip request for specific rotations.

Whenever you enter a slip request using a date range, PCS will bring up the reminder shown below that your standing qualifiers have been used (even if they’re blank), along with a menu of qualifiers so that you can adjust your qualifiers for this individual slip request, if desired. (Note that this reminder to adjust qualifiers, if necessary, will appear regardless of whether you have previously set your Standing Request Qualifiers.)

If you wish to use your Standing Request Qualifiers for this individual request, you can simply select Save. If you elect to adjust your qualifiers for this individual request, these adjustments will be applied to this request only. Your standing qualifiers will remain unchanged for future slip requests.

Rotation Value and Length Parameters

- **Number of duty periods for rotation** - does not necessarily correlate to the number of calendar days of the rotation
- **Number of legs for the rotation** - the total number of legs, including deadhead legs
- **Number of calendar days for the rotation** - a calendar day is 0000 - 2359 pilot base time; a rotation that releases after 2359 pilot base time is considered as starting a new calendar day
- **Minimum and/or maximum total time for picked-up rotation** - this qualifier lets you express the value of flying you wish to be awarded, including any credit time
- **Maximum calendar days desired for pick-up per bid period** - this adds the number of calendar days of a given rotation to the those that have been added to your schedule thus far via WS or GS; it does NOT count flying from your initial line of time, nor flying you've added via swap with the pot, the Pilot to Pilot Swap Board, GSWC, or an inverse assignment; only those rotations that do not exceed the maximum when added to trips that were previously picked up via WS or GS will be awarded
- **Do not exceed a monthly projection of XXX** - your projection means your total pay and credit; while this may further limit a WS award below the WS pickup limit, it will not limit a GS, so long as you are at or above the GS trigger; if you are below the GS trigger, a portion of your GS trip will be pay and credit and could thus be limited by this qualifier
- **Minimum average time per calendar day** - while ADG guarantees you an average of 5:15 per day of a rotation, releasing between 0000 and 0159 does not generate another 5:15 for that last day; for purposes of this qualifier, a rotation that releases after 2359 pilot base time is

considered as starting a new calendar day

Rotation Time Parameters

- **No report before hh:mm** - applies only to the first duty period of the rotation
- **No report after hh:mm** - applies only to the first duty period of the rotation
- **No block in before hh:mm** - applies only to the last duty period of the rotation
- **No block in after hh:mm** - applies only to the last duty period of the rotation
- **Break between picked-up rotations** - break is measured from release to report; this parameter considers only the break between rotations being awarded from the current individual slip award; it does NOT consider the break between an awarded rotation and other rotations on your line; you can enter a Min, a Max, or both, but you cannot enter a value less than 9:00

You can only check one item of the following:

- **Request earliest report available** - if there is more than one rotation that matches your overall preference, checking this block will award you the rotation with the earliest report
- **Request latest report available** - if there is more than one rotation that matches your overall preference, checking this block will award you the rotation with the latest report
- **Request earliest block-in available** - if there is more than one rotation that matches your overall preference, checking this block will award you the rotation with the earliest block-in
- **Request most block time for available rotation(s)** - if there is more than one rotation(s) that matches your overall preference, checking this block will award you the rotation(s) that has the most block time (not necessarily the highest value)
- **Request highest total time for available rotation(s)** - if there is more than one rotation(s) that matches your overall preference, checking this box will award you the rotation(s) that has the highest value

All-Nighters/WOCLs

- **All-nighters are defined as duty time between hh:mm E and hh:mm E** - allows you to set your individual definition of an all-nighter; input times in a 24-hour clock format (e.g., 23:00 to 07:00) and be sure to make any conversions to the eastern time zone as appropriate

You can only select one of the following two options for your rotation request:

- **No all-nighters** - if you have not defined your individual parameters for an all-nighter, you will be prompted to do so after selecting this option
- **No all-nighters except with minimum layover of hh:mm in XXX including all contractual co-terminals** - refers to the layover preceding the all-nighter; again, you will be prompted to define an all-nighter if you have not already done so; this option requests an all-nighter only if it is preceded by a layover of at least the specified duration and in the specified layover city; if the city field is left blank, the layover may be in any city

Important- the city code you enter must be a valid layover city and will include any contractual co-terminals. For example, if you enter SFO, then a layover in OAK would suffice.

Valid co-terminals are:

DCA/IAD	DFW/DAL	IAH/HOU	JFK/EWR/LGA
LAX/BUR/LGB/ONT/SNA			
MIA/FLL	ORD/MDW	SFO/OAK/SJC	LGW/LHR
KIX/ITM	SEA/BFI	HND/NRT	

- **Waive 2 WOCL off rule** - FAR 117 requires a pilot who has flown in 3 consecutive WOCLs (0200 - 0559 acclimated time) to be off during the next WOCL; the PWA requires such a pilot to be off during the next 2 consecutive WOCLs; you can waive this additional requirement and

reduce the 2 WOCLs off to 1 WOCL off following 3 consecutive WOCLs on by checking the Waive Rule box

Rotation Parameters

- **Acceptable rotation begin/end co-terminal cities** - applies only to rotations reporting and releasing in a co-terminal base (current LAX and NYC); this qualifier allows you to establish at which co-terminal airport(s) you are willing to report and/or block in
- **Maximum sit around time within any duty period is hh:mm** - allows you to limit the length of any sit around within an awarded rotation
- **VAS rotations only** - indicates you only wish to be considered for VAS period rotations on your selected date range
- **VAS and Non-VAS rotations acceptable** - indicates you only wish to be considered for VAS period and flying rotations on your selected date range
- **Standby rotations only** - indicates you only wish to be considered for standby rotations on your selected date range
- **Standby and non-standby rotations acceptable** - indicates you only wish to be considered for standby period and flying rotations on your selected date range
- **VAS and standby rotations only** - indicates you wish to be considered for both VAS and standby rotations, but not flying rotations
- **Exclude MAC rotations** - allows you to avoid military air charter rotations
- **Exclude MED (Malaria Endemic Destination) rotations** - allows you to avoid rotations to MED locations
- **Volunteer for verification flight** - you must check this box if you wish to be considered for a rotation that includes a verification flight
- **Minimum time from award to report hh:mm** - allows you to establish a minimum response time for same/next/second-day coverage; this qualifier is used only for same/next/second-day trip coverage
- **Do not call between hh:mm E and hh:mm E** - allows you to establish a period during which you will not be disturbed with an award notification; this qualifier is used **only** for same/next/second-day trip coverage; if you would need to be called to notify you of an award during this time period, you will be bypassed for the award; that said, you can still be awarded a rotation reporting at least 12 hours after initial notification during this time period if you have selected both Auto-Accept a proffered rotation **and** Auto-Acknowledge a rotation award

Rotation Layover/Deadhead Parameters

- **No layovers less than/greater than hh:mm** - sets the minimum and/or maximum layover lengths you are willing to accept on this slip request
- **At least one layover hh:mm or greater** - prevents being awarded a rotation that contains all shorter layovers
- **Rotation must layover in at least one of these cities** - requires at least one layover to be in a specified layover cities; co-terminal cities are not considered equal with this option; for example, if you list LGA as a requested layover, a JFK layover would not satisfy your parameter
- **No deadhead-only duty periods** - excludes any rotations that contain a deadhead-only duty period
- **Rotation must start/end with deadhead** - allows only rotations that begin or end (as appropriate) with a deadhead

ARCOS (23 Z.)

ARCOS is the automated roster callout system that Delta uses for processing of same/next/second-day white slip (WS) and green slip (GS) awards, both in and out of base. The system allows the scheduler to contact multiple pilots from the Trip Coverage report at one time via an automated caller, first to proffer each a number of available trips and then to award those pilots accepting such a proffer the trip that best meets their preferences and that their seniority permits them to hold.

When being notified by ARCOS of the availability of a WS or GS award, you have two options:

- You can answer the phone call from **(844) 325-5629** and indicate your desires over the phone
- You can respond to the notification via the ARCOS app, once you have downloaded it to your phone or Company-issued iPad and set it up

One key aspect of ARCOS is the “offer window” during which you can review a same/next/second-day WS or GS proffer. For each notification, you can review the available rotation(s), including “critical trip coverage” (departing within three hours from contact), and decide if you are willing to accept any of them, and if so, in which priority. While ARCOS will call you for each notification unless you have opted out of such calls (see the Auto-Accept and Auto-Acknowledge discussions below), you can also elect to receive email, text and/or mobile app notifications. You can always choose to answer the call or not or use the app to make your selections.

If you are awarded a rotation, you’ll receive another call back, followed by a 12-minute window to acknowledge or decline the rotation award. All same/next/second-day WS or GS awards are proffers. Effectively, this means that any call from Crew Scheduling themselves will be for a GSWC, IAWC, or routine reserve assignment. Calls for inverse assignments (IA) are generated by the Crew Notification (CNO) system.

Setting up ARCOS

You need not do anything to receive a same/next/second-day WS or GS, other than submit the applicable request in iCrew. However, if you want to simplify the process and make it much quicker and easier to respond to a GS, ALPA strongly recommends you create an ARCOS account by following these steps:

1. Create an ARCOS account by calling **844-325-5629**
 - a. Your employee number is your nine-digit PPR number
 - b. Your initial PIN is 1234 (you’ll change the PIN to any four-digit number)
 - c. Record your name when prompted
2. Download the ARCOS app per the instructions in the ARCOS User Manual, which is posted on the Crew Resources/Scheduling page in DeltaNet.
3. Once downloaded, you’ll scroll to the bottom of the app, click First Time Set Up and follow the prompts. **Note that you must set up the four-digit phone PIN prior to logging into the ARCOS app for the first time.**
4. Enter your contact information and preferences per the instructions in the ARCOS User Manual.
5. If you have the app and set up email and text notification, when a same/next/second-day WS or GS meets your slip requests, you will receive a phone call, email, text message and app notification

The ARCOS app is constantly being updated. For the latest features, and to view ARCOS tutorial videos and the ARCOS User Guide, navigate to DeltaNet > My Division > Crew Resources. Pilot Assist can help with most issues including passwords, password resets, etc.

Using ARCOS

- A pilot submits their same/next/second-day WS and/or GS requests in iCrew and ARCOS will call all number(s) listed in their phone contact list in iCrew

- The phone number for awarding a same/next/second-day WS and GS is separate and different than any other Delta Crew Scheduling number. Save this number in your phone contacts: **844-325-5629**

- If you answer the call, ARCOS will read details about the rotation(s) including:

- Report date and time
- Release date and time
- Departure airport
- Total credit of the rotation
- Rotation length in days

Note: The number of rotations that ARCOS will place in a single callout is limited to the number which are possible for the ARCOS VRU to communicate these details about all the rotations in the callout.

- When a same/next/second-day WS or GS is processed through ARCOS, ***you will be given the offer window*** to look at the rotation(s), determine your availability, and then rank-order any rotation(s) you desire
 - You can decline any/all rotations
 - For a quick look at the rotation(s), you can expand each rotation and select Details
 - For a more detailed look, consider using the MiCrew app or any other access to open time you use; you might also consider bookmarking icrew.delta.com for quick access to iCrew
- When the offer window is up, or when all pilots within the callout have responded, ARCOS will determine eligibility based on responses and seniority, and award the rotation(s) to the senior pilot(s) who responded to ARCOS in the affirmative
- ARCOS will call you back to notify you of an award
 - ***You will have 12 minutes to acknowledge the rotation*** via the ARCOS app, the ARCOS VRU, or iCrew
 - If you wish to decline the award, you can do so in the ARCOS app or during the award call or simply ignore the award notification
 - Once you acknowledge the rotation, you are obligated to fly it
- Rotations will be awarded one at time
 - If you decline (or do not acknowledge) your award, ARCOS will automatically award you your next choice of rotations, if any
 - If you decline that award, this process will continue until there are no more rotations available to you
 - The system will then repeat this process with the next pilot in seniority order
 - Declining a rotation instead of waiting for the 12 minutes to expire will help expedite the overall award process

Responding Outside the Offer Window

Whether or not you have responded to the initial callout within the Offer Window, you can input or change your response after the Offer Window has closed. Any inputs you made during your Offer Window will be considered in seniority order within your batch of pilots. Any inputs you make after your Offer Window has closed will be considered in seniority order ***after all pilots in the then current subsequent batch*** have been considered.

For example, suppose you receive an ARCOS call out for two rotations, as shown below:

arcos® < Back

Inside Response Window

5673

Trip Coverage

Green Slip

To respond to rotations, drag them from Available to Selected, and drop them in your desired order.

Don't show again

Selected

Suppose you now decide that you'd like the other trip as well and that you'd even like it above the one trip you selected inside the Offer Window. You can now drag both of these trips into the Selected Out Of Window Preferences area, as shown below:

The screenshot shows the ARCOS interface with a red header bar containing the 'arcos' logo, a 'Back' button, and a menu icon. Below the header is a yellow banner with a warning icon and the text 'Outside Response Window'. The main content area is divided into three sections: 'Trip Coverage', 'Selected In Window', and 'Selected Out Of Window Preferences'. The 'Trip Coverage' section shows a green slip for trip 5673. The 'Selected In Window' section shows a table with one row for trip 8596, reporting on 04Jun 0715, with an 'Open' status, 'Airport ATL', and a count of 1. The 'Selected Out Of Window Preferences' section shows a table with two rows: trip 8746 (reporting 04Jun 1319, Open, Airport ATL, count 1) and trip 8596 (reporting 04Jun 0715, Open, Airport ATL, count 2). Each row in this section has a grid icon to its right. Below these sections is an 'Available' section with a dashed rectangular box.

Available

When considering pilots within your batch, ARCOS will use your Selected in Window preferences and only consider you a candidate for the rotation you initially selected. If that rotation is awarded to a more senior pilot, or if it is awarded to you but you decline the award, you will remain in consideration for the other rotation, but only after then current subsequent batch of pilots is offered that rotation.

Auto-Accept and Auto-Acknowledge Options

- You have the ability to auto-accept and/or auto-acknowledge rotations while on or off duty
 - These fields default to indicate N; you will need to change that to Y as applicable to use these auto-accept and/or auto-acknowledge functions
 - Auto-accept functionality will apply **regardless of when the rotation reports**, but only for ARCOS call outs for same/next/second-day WS and GS
 - Auto-acknowledge is only applicable to rotation reporting at least 12 hours after notification and applies to all same/next/second-day WS, GS, GSWC, and YS for flying on X-day awards
- If you have selected auto-accept OFF duty, you will not receive an email or callout advising of call-out while you are not on duty; if you have selected auto-accept ON duty, you **will** receive notification via email and call-out while on duty
 - In either case, you will not have an offer window unless you are in a batch where at least one pilot does not have auto-accept selected
 - The trips you are eligible for will be ordered based on your slip request

- If there is an offer window for your batch, you will be able to adjust your preferences, if desired
- If you have selected auto-acknowledge on and off duty
 - This will only be awarded if the trip reports at least 12 hours after the award
 - If you are ON duty, you will receive notification via email and call-out
 - If you are OFF duty, you will not receive an email notification or a call
 - A notification call out **will** be made for trips reporting in fewer than 12 hours and will require a response

Auto-Accept Option (23 Z. 1. b. Note one)

You have the option to **auto-accept trip proffers during the offer window**, either while on duty, while not on duty, or at any time. If you select Y to this option, you will **not be contacted during the offer window**, but will be considered to have accepted the proffer of all rotations that meet your same/next/second-day WS or GS stipulations, as applicable. These rotations will be ordered according to the preferences laid out in the PCS Request Qualifiers that you have applied to the applicable slip request, and you will be awarded the rotation that best meets those qualifiers and that your seniority permits you to hold. You can read more about setting your PCS Request Qualifiers in the *PCS Request Qualifiers* section of this SRH.

Example:

Suppose you have submitted a GS for any rotation that operates within the date range 21-30MAY, added the qualifier that you prefer the latest report available, and opted to auto-accept the offer window notification both while on and off duty, as shown below.

Process this request until @ 23:59 Eastern

Auto accept on duty? Off duty? Auto ack on duty? Off duty?

A. Specific Rotations:

	Rot#		dd	mmm			Rot#		dd	mmm			Rot#		dd	mmm
1.		/		MAY	AND	2.		/		MAY	AND	3.		/		MAY

----- or -----

B. Enter All Flying Days For Award:

dd	mm		dd	mm		dd	mm		dd	mm		dd	mm	
21	MAY	-	30	MAY		MAY	-		MAY		MAY	-		MAY
	MAY	-		MAY		MAY	-		MAY		MAY	-		MAY
	MAY	-		MAY		MAY	-		MAY		MAY	-		MAY

If you are included in an ARCOS batch of multiple same/next/second-day WS or GS proffers, as applicable, for rotations that operate within the date range 14-20AUG, you will not be called during the offer window but will be assumed to have accepted the proffer for all rotations in that batch and to have ranked these rotations in order of latest to earliest report.

You will be notified of your award to the highest ranked rotation your seniority permits you to hold **but you will still have the option to decline the award**.

Note: While this option is also available for selection on the YS for Flying on X-Days and GSWC templates, it has no effect, as none of these awards are processed through ARCOS and do not include an offer window.

Auto-Acknowledge Option (23 Z. 1. c. Note one)

In addition, you have the option to **auto-acknowledge trip awards during the award window**,

either while on duty, while not on duty, or both. However, this applies only for trips that are **scheduled to report more than 12 hours from notification** of the award. Like beyond-next-day PCS awards, you will be expected to maintain awareness of trip coverage if you select this option.

Suppose you are awarded a rotation that is scheduled to report 12 or more hours in the future using this option. ARCOS will not notify you of the award unless you are on duty at the time of the award, and you will be obligated to fly the rotation.

An award for a rotation reporting in fewer than 12 hours will require that you acknowledge the award if you do not wish to be bypassed.

Note: While selecting auto-acknowledge obligates you to fly an awarded rotation, **Section 23 E. 4. b. of the PWA (auto-acknowledge while on duty)** requires that you be notified of such an award if you are on duty at the time. By contrast, you will NOT be notified of such an award by telephone if you are not on duty.

Example:

Suppose you have submitted the same GS request as above, have opted to auto-accept the offer window notification, and have also opted to auto-acknowledge the award window notification both while on and off duty, as shown below.

Process this request until @ 23:59 Eastern

Auto accept on duty? Off duty? Auto ack on duty? Off duty?

A. Specific Rotations:

	Rot#		dd	mmm			Rot#		dd	mmm			Rot#		dd	mmm
1.		/		MAY	AND	2.		/		MAY	AND	3.		/		MAY

----- or -----

B. Enter All Flying Days For Award:

dd	mmm		dd	mmm		dd	mmm		dd	mmm		dd	mmm	
21	MAY	-	30	MAY		MAY	-		MAY		MAY	-		MAY
	MAY	-		MAY		MAY	-		MAY		MAY	-		MAY
	MAY	-		MAY		MAY	-		MAY		MAY	-		MAY

If you are included in an ARCOS batch of multiple GS proffers for rotations that operate within the date range 21-30, you will be assumed to have accepted the proffer for all rotations in that batch and to have ranked these rotations in order of latest to earliest report.

Again, you will be awarded the highest ranked rotation your seniority permits you to hold.

However, if this rotation is scheduled to report 12 or more hours from notification, you will not be notified of the award and will have no option to decline the award. The only exception to this is if you are on duty at the time of the award. On the other hand, if the rotation which you are awarded is scheduled to report in fewer than 12 hours, you will be notified by ARCOS and will retain the option to decline the award. That is, the normal award window process applies.

CAUTION: If you elect to auto-acknowledge the award window, ARCOS will NOT notify you of your award to a rotation that meets your preferences and that reports 12 or more hours after the award unless you are on duty at the time of the award. In any case, you will be obligated to fly the rotation.

Note: This option will continue to be available for selection on the YS for flying on X-days and

GSWC templates, just as the Auto-Acknowledge While on Duty is today. The only change is that it will now also be available to use while not on duty. Again, if you select this option, Crew Scheduling will not call you to notify you of a YS for flying on X-days or GSWC award to a rotation that meets your preferences and that reports 12 or more hours after the award. The only exception is if you are on duty at the time of the award. In any case, you will be obligated to fly the rotation.

“Do Not Call (DNC) Between” Considerations

A pilot has the option of designating a period during which they do not wish to be called when submitting a slip request. Suppose you define such a DNC period when submitting a slip request, and Crew Scheduling happens to be covering a rotation during that period for which you are eligible. In that case, they will not call you but instead bypass you and move on to the next pilot.

However, Auto-Accept and Auto-Acknowledge options will give you the ability to continue your eligibility for rotations that are awarded during your DNC period without your sleep being disturbed, so long as they report 12 or more hours in the future.

Note: If you elect to use this option, you must be prepared to report for whatever rotation you are awarded during this period, so long as that rotation reports 12 hours or more from the time of the award. In addition, if the rotation reports in fewer than 12 hours (thus requiring notification and acknowledgment) and notification would have occurred during your designated DNC period, you will be bypassed for the award.

When Would You Use These Options?

There are number of scenarios in which you might use either Auto-Accept, Auto-Acknowledge, or both.

Scenario #1

Suppose you are comfortable with the setup of your PCS Preference Qualifiers and have no need to review the list of rotations available to you on your slip request. Instead, you would prefer to avoid an unnecessary phone call from ARCOS, and simply accept the proffer of the rotation available at your seniority that best meets your qualifiers. In that event, you might select Y to the Auto-Accept option, both while on and off duty.

Instead of calling you to proffer you a list of available rotations, ARCOS will consider you to have accepted these rotations in the order established by your qualifiers. ARCOS will attempt to award you the first rotation in this order that is available to you at your seniority. So long as you selected N to Auto-Acknowledge, or in any case, if the rotation reports in less than 12 hours, you will still be contacted when ARCOS awards you the rotation and be given the option of declining the award.

Scenario #2

Suppose that you are on a rotation and do not wish to miss out on a possible slip award while flying. Having set your PCS Request Qualifiers to your liking, you select Y to both Auto-Accept and Auto-Acknowledge, but only While on Duty.

So long as you are on duty (or during the time of a scheduled deadhead from which you have deviated), ARCOS will consider you to have accepted available rotations in the order established by your qualifiers. ARCOS will attempt to award you the first rotation in this order that is available to you at your seniority. If this rotation reports at least 12 hours in the future, you will be considered to have acknowledged the award. ARCOS will notify you by telephone of this award as required under **Section 23 E. 4. b.** of the PWA which addresses auto-acknowledge while on duty.

Scenario #3

Suppose that you do not wish to be disturbed overnight while you are sleeping unless you are awarded a rotation, and in no case do you want to be bothered between midnight and 0500. You can report for any rotation that reports after 1200, but you still wish to be considered for rotations that report earlier. In addition to setting Do Not Call Between hours between midnight and 0500 in

your slip request, you select both Auto-Accept and Auto-Acknowledge.

ARCOS will automatically award you the most preferable rotation according to the stipulations you are eligible for. If this rotation reports in fewer than 12 hours, the system will call you and give you the option to decline the award unless that call would come between midnight and 0500. In this case you'll be bypassed for the award.

If the rotation reports in 12 or more hours, the system will automatically acknowledge the award on your behalf. ***Note that you will then be required to report for that rotation.***

Yellow Slips and Reserve Preference Qualifiers (23 T. & 23 S. 18.)

The reserve system assumes a pilot *does not* wish to be assigned any flying or short call if the pilot has not submitted a YS.

A YS request may indicate a reserve pilot's desire to be considered first in sequence for:

- flying on on-call days,
- flying a carry out rotation into a bid period in which they are either a regular pilot, or a reserve pilot in a different category,
- conversion to short call,
- flying on X days.

A reserve pilot's YS may stipulate:

- a rotation(s) and/or date(s) on which they desire to fly,
- date(s) and/or start time(s) on which they desire to be converted to short call, and
- any of the parameters set forth in the PCS YS template.

A reserve pilot's preference qualifiers may indicate their preferences to be considered only if they are needed:

- to fly, or
- for short call.

Earlier RAW Value Grouping (23 S. 1. a. Note one Exception)

A reserve pilot whose RAW value places them in the second RAW value grouping, may submit a YS to have their preferences considered in seniority order as if the pilot were in the first RAW value grouping.

For example, assume it is later in a bid period and your RAW value places you in the second RAW value grouping and you desire to be awarded additional flying. You have the option, but not the requirement, to submit a YS for certain days or rotations and to be considered in seniority among pilots in the first RAW value grouping.

Select Preference Qualifiers		To Be First For Flying	
Employee:	Seniority:	Category:	Bid period:
Reduce raw bucket (y/n): No		Reduce days of availability grouping (y/n): No	
Enter Specific Rotations: (Rotation # / dmmmm)			
1: / Oct and/or 2: / Oct and/or 3: / Oct			
- AND/OR -			
Enter Date Ranges:			
Oct	Thru: Oct	Oct	Thru: Oct
Oct	Thru: Oct	Oct	Thru: Oct
Oct	Thru: Oct	Oct	Thru: Oct

Note that the option (in the red box) to reduce your RAW value grouping (bucket) defaults to No on the YS template to be considered first for flying, either on on-call days or on X-days. Changing that to Yes will cause Crew Scheduling to consider you in seniority order among pilots in the first RAW value grouping.

Lower Days-of-Availability Grouping (23 S. 1. a. Note two Exception)

In addition, a reserve pilot may preference a trip that is equal to their days-of-availability or to their days-of-availability *minus one*. This provision will be available any time that the number of pilots with the same days-of-availability is equal to the number of open trips of that length, *plus one*, including the pilot in question.

For example, suppose a reserve pilot in the three-day days of availability grouping desires to be awarded a two-day rotation for the following day. They would have the option to select Yes to Reduce Days of Availability Grouping in the blue box above. Suppose now that there are four three-day rotations available in open time for that same day. The pilot will be awarded their YS request for the two-day rotation, so long as:

- The pilot in question is the most senior two- or three-day reserve pilot requesting the rotation, and
- There are at least five three-day pilots available, including the pilot in question.

Preference Qualifiers If Needed to Fly or for Short Call

The process by which Crew Scheduling considers Yellow Slips (YS) and *Preference Qualifiers If Needed* is as follows:

1. At the time the trip coverage report is created, Crew Scheduling is required to first determine how many pilots are needed prior to starting assignments.
2. Once the scheduler determines how many pilots are needed to cover the number of rotations on the trip coverage report, the scheduler will look to see if any submitted an “If Needed” qualifier. If one of those pilots submitted a *Preference Qualifier If Needed*, the preference is treated similarly to a YS and the pilot’s qualifiers and quantifiers will be considered in seniority order.
Note: A reserve pilot is never “needed” to fly or begin a short call period in fewer than 18 hours after first attempted notification, or earlier than ten hours after the end of a non-fly day. In either of these instances, a pilot’s “If Needed” preference will not cause the pilot to receive an assignment.
3. Crew Scheduling will then assign rotations from the current trip coverage report as described under PWA **Section 23 S. 1. a.**

Note that submitting a *Preference Qualifier If Needed to Fly* does not increase your chances of being assigned a rotation or a short call. These preferences will be used only if Crew Scheduling determines via the trip coverage report that you are needed to fly. *Preference Qualifiers If Needed to Fly* and YS will be used in seniority order to determine which rotations are assigned to the identified pilots, then inverse seniority order for any remaining rotations.

Example 1

There are three pilots available. In seniority order, they are Pilots 1 through 3, all in Bucket 1, all with three days of availability. There are two three-day rotations being covered and all three pilots are legal for both rotations. None of the three pilots have submitted a YS, but they have all submitted *Preference Qualifiers if Needed to Fly*.

Result:

- Pilots 2 and 3, being the most junior, will be identified as the pilots needed to fly
- Pilot 2 will be assigned one of the two rotations according to their preferences and Pilot 3 will be assigned the remaining rotation
- If neither rotation matches the preferences of Pilot 2, then Pilot 3 will be assigned a rotation according to their preferences and Pilot 2 will be assigned the remaining rotation
- If neither rotation matches either pilot’s preferences, the rotations will be assigned at the scheduler’s discretion

Example 2

There are ten pilots available. In seniority order, they are Pilots 1 through 10. Pilots 1 - 5 have three days of availability. Pilots 6 and 7 have two days of availability. Pilots 8-10 have four or

more days of availability. The pilots have different RAW values but are all in the same RAW value grouping.

Three rotations are being covered (A, B, and C). Rotation A is a two-day rotation. Rotations B and C are three-day rotations.

Pilot 4 has submitted *Preference Qualifiers if Needed to Fly* that match rotation B, Pilot 5 has submitted a YS for rotation B, and Pilot 6 has submitted a YS for rotation A.

Result:

- The longer rotations (B and C) are covered first
- Pilots 4 and 5, being the most junior with three days of availability, are identified to fly rotations B and C (Pilot 5 would have been identified, regardless of their seniority, as they had submitted a YS for Rotation B)
- Rotation B is assigned to Pilot 4 per their preferences, as they are more senior of the two pilots that have been identified to fly, as their *Preference Qualifier If Needed to Fly* now carries the same weight as a YS
- Rotation C is assigned to Pilot 5
- Rotation A is awarded to Pilot 6 as a YS

Additionally, when Crew Scheduling determines how many short call pilots are needed each day, it does so by creating a short call management list that identifies eligible short call pilots. Just like a *Preference Qualifier If Needed to Fly*, the *Preference Qualifier If Needed for Short Call* will not increase your chances of being assigned a short call. You will only be assigned short call if you would have been assigned short call without the preference. At no time will a *Preference Qualifier If Needed* make a senior pilot fly or be assigned short call before a junior pilot, unless that senior pilot has submitted a YS for such assignment.

Silver Slips (23 DD.)

At its discretion, Crew Scheduling may designate certain open time rotations as Premium Rotations via the "SLV" column on the Open Time display. These rotations will be available using a Silver Slip (SS). If flown, the pilot will receive single pay and credit, plus single pay, no credit for the pay and credit portion of the rotation, plus single pay, no credit for any additional pay items on the rotation, e.g., EDP Pay, Sit Pay, etc. **If the pilot is removed from all or a portion of the rotation, e.g., due to IROPS, they will receive single pay and credit for the greater of what they fly or rotation guarantee, plus single pay, no credit for what they fly, plus single pay, no credit for any additional pay items on the rotation, e.g., EDP Pay, Sit Pay, etc.**

These rotations will be available to regular pilots and may be bid at any time from when next-month PCS begins (at 0700E on the 20th of the prior month) until the start of manual trip coverage.

Awarding Silver Slips

When viewing open time, a pilot will see that a rotation has been designated as premium. A Premium Rotation must be so designated in open time for at least 48 hours before it can be awarded via a pilot's SS. During this period, it may not be awarded or assigned to any pilot. So long as a rotation carries a premium designation, it cannot be awarded via a pilot's WS or swap with the pot request and will only be awarded via the automated PCS function.

- When the SLV column is blank, that rotation has not been designated as premium and may be awarded via a pilot's WS or swap with the pot request.
- When the SLV column shows "N," the rotation has been designated as premium within the past 48 hours and may not yet be awarded to any pilot, including via a pilot's WS or swap with the pot request.
- When the SLV column shows "Y," the rotation has been designated as premium for at least 48 hours and may now be awarded via a pilot's SS request. It may NOT be awarded via a pilot's WS or swap with the pot request.

The rules for being awarded a premium rotation on a SS are similar to that of being awarded a non-premium rotation on a WS via PCS:

- The WS pick up limit will apply to the pay and credit portion of the Premium Rotation
- A pilot may be awarded a SS that conflicts with a rotation in the following bid period; the conflicting rotation will be dropped with no pay
- A pilot who has submitted a SS request is responsible for determining an award; Crew Scheduling is not required to notify a pilot of a SS award
- A pilot will not be awarded a SS if it would be within 30 minutes of causing a PWA/FAR conflict, to include a conflict with a rotation for which the pilot called in sick; in this latter case, the pilot's SS request will be considered only after the SS requests of pilots without such a conflict

A pilot who has been awarded a SS may drop the Premium Rotation via their PD, APD, or IVD (assuming adequate reserve coverage). By default, the dropped rotation will retain its designation as premium and will again have to remain in open time for at least 48 hours before being awardable via another pilot's SS. The PD, APD, or IVD request of a pilot who wishes to drop a Premium Rotation will not convert to a qualified personal drop (QPD) request.

A pilot may not swap out of a Premium Rotation, either with the pot or with another pilot.

Once a rotation is assigned to a regular pilot, the premium designation will not change. However, Crew Scheduling may remove the premium designation from a rotation that remains in open time at its discretion, and the premium designation of such a rotation that remains in open time is automatically removed at 0800E two days prior to report. The rotation can then be awarded via a pilot's WS, YS, or GS under the steps of manual trip coverage, or via swap with the pot until 0700E the day prior to report.

Green Slips and Green Slips with Conflict (23 Q. & 23 U.)

GS awards are used to cover rotations when WS requests and available reserve pilots have been exhausted. GSWC requests have a lower priority under **Section 23. N.** and **O.** and are awarded after all options for GS and IA (without conflict) have been exhausted.

A regular pilot who has flown a GS rotation:

- will receive double pay, no credit for the portion of their GS rotation that they flew and that exceeds the lesser of the ALV minus five hours or 72 hours, and
- may use up to five hours of their bank, prior to accounting for the GS rotation, to bring their projection to the lesser of the ALV minus five hours or 72 hours.

Note: The pilot's vacation and CQ training in the bid period will be considered as pay and credit for purposes of determining if they have met the lesser of ALV minus five or 72-hour threshold in such bid period.

A reserve pilot who has flown a GS rotation:

- will receive single pay, no credit (above their reserve guarantee) for the portion of a GS rotation that they flew and that interrupted an X-day or was flown after their accumulated credit equaled the ALV, and additional time free of duty under **Section 23 S. 16.**
- who is a long-call pilot will receive single pay, no credit (above the reserve guarantee) for the first duty period of a GS rotation flown on an on-call day if the report of the rotation is within 18 hours of the first attempted contact.

Note: A pilot may also be awarded a GS rotation with a report that is earlier than ten hours after the end of the pilot's last non-fly day (normally 1000 pilot base time). In such a case, the pilot would receive single pay, no credit (above the guarantee) for the first duty period, regardless of when the pilot is actually notified of the award.

Example: At 0930 on their last X-day, a pilot is notified of a GS award for a rotation reporting at 0500 on their first on-call day. Although the notification in this case occurs more than 18 hours prior to report, they will receive single pay, no credit (above the guarantee) for the first duty period of the rotation if they accept the proffer. The pilot should see the rotation award coded as F (not G) on their iCrew monthly schedule display.

- who is awarded a GS rotation in which all duty periods of the rotation are scheduled to operate on on-call days may request one X-day that coincides with a day during which the pilot does not have a duty period within the GS rotation be moved to the first day of the GS rotation. (For example, a reserve pilot with one X-day on the 12th may be awarded a three-day GS rotation on the 11th which has a 30- hour layover and no duty period touching the 12th. That X-day may be moved to the 11th.)

Some of the basic provisions for GS and GSWC awards are:

- All GS and GSWC awards are proffers. A pilot is free to decline such a proffer, even if the rotation meets their PCS qualifiers.
- A pilot can bid trips in their base (GS or GSWC) or in another base (out-of-base GS or GSWC).
- A pilot must meet any special airport/route qualifications.
- If bidding an out-of-base rotation, the pilot is responsible for commuting to the other base. Transportation, lodging, and per diem are not reimbursed prior to report or after release from the rotation.
- There must be ten hours of prospective rest prior to the start of an FDP. A regular pilot is always on rest if there are no assignments on their schedule. A reserve pilot is ONLY on rest on an X-day or if on an acknowledged prospective rest period.
- A reserve pilot on a "proactive prospective" rest (not required rest to fly GS rotation) will be considered for the GS.
- A GS rotation may not overlap another rotation or create an FAR and/or PWA conflict.
- Seniority list instructors may submit GS requests, which will be processed under **Section 23 N. 21.** or **O. 15.**
- A GSWC award may not conflict with a previous GSWC award.

- A rotation that conflicts with a GSWC rotation is removed with no recovery obligation.
- A pilot who is awarded a GSWC will receive single pay and credit for the rotation removed *and* single pay, no credit, for the rotation flown. A number of pay examples are included in **Section 23 U**.
- A pilot who is awarded a GSWC will be eligible to be awarded/assigned an additional rotation(s) that operates during the period of the removed rotation.
- A pilot will not be awarded a GSWC or IAWC for a rotation that conflicts with a rotation on their line originating on the same day.
- A pilot will not be awarded a GS or WS if the rotation would create an FAR conflict with a rotation that the pilot missed or will miss due to sick leave, other than under sick leave fly-back, unless there is no other pilot available for that GS or WS.
- A reserve pilot will be awarded a same-day GS without regard to a reserve assignment already on their schedule for the next two days, i.e., a reserve rotation, short call, or YS award.
 - Similarly, a reserve pilot will be awarded a next-day GS without regard to a reserve assignment already on their schedule for the following day.
 - The reserve pilot will be given a nine-hour break in duty followed by replacement of each interrupted X-day in accordance with PWA **Section 23 S. 11**.
 - For example, a one-day GS is awarded on the pilot's last X-day with a legal assignment on their first RES day. The assignment (YS/RES rotation/SC) will be removed in order to provide the RES both a nine-hour break in duty and the pay back day for the one-day GS.

Processing and Notification

- GS and GSWC awards are manually processed by Crew Scheduling according to the limitations and preferences entered into PCS by the pilot.
- A second or subsequent GS will not be awarded to a pilot until all pilots who are legal for the rotation and who have submitted GS requests have had an opportunity to accept a like number of GSs. A similar rule applies to GSWC. If you are awarded a GS and subsequently the rotation is cancelled, make sure the "G" on your line of time is removed. The "G" is how the computer knows whether you have flown a rotation or not for the above leveling mechanism.
- Crew Scheduling will use ARCOS to attempt to notify the pilot of a GS award and will attempt to notify them of a GSWC award personally via telephone. *A GS/GSWC award is a proffer and the pilot is under no obligation to accept the proffer.* If unable to contact the pilot, or if the pilot declines the proffer, Crew Scheduling will bypass the pilot and move to the next eligible bidder.
- Please see the ARCOS chapter of this SRH for details on the notification process for GS.
- When awarding a GSWC, Crew Scheduling is required to allow the pilot a minimum of ten minutes to respond if the departure is greater than three hours from first attempted contact. High call volume and long hold times may make it difficult to contact Crew Scheduling by phone. If return contact by phone is not possible, the IVR or iCrew should be considered as alternate methods of acknowledging the award.

See **Section 23 U** of the PWA for complete details on GS and GSWC bidding options and restrictions, as well as pay and credit provisions.

WS/GS/GSWC Sick Leave Scenarios (23 P. 3. e. & 23 Q. 6. f. Exceptions)

The PWA provides that a pilot will not be awarded a WS/GS/GSWC if the rotation would create an FAR conflict (30-minute buffer for WS) with a rotation(s) that the pilot missed or will miss due to sick leave. The two exceptions to this provision are:

- The pilot will be considered for such an award in seniority order after all pilots that do not have such a conflict
- This provision does not apply in the case of sick leave flyback

Note: The pilot is NOT “moved to the bottom of the list” for all WS/GS/GSWC awards, only for those awards for rotations that would create a conflict as described above.

Scenario #1

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305				3402	3402	3402
SICK	SICK	SICK	SICK				WS/GS	WS/GS	WS/GS

Pilot was sick for 3305 and later submitted WS/GS/GSWC for 3402. If they would not have been legal to fly both rotations (30-minute buffer for WS), they will be at the bottom of the WS/GS/GSWC list.

Scenario #2

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305						
SICK	SICK	WELL	WELL						
			3402	3402	3402				
			WS/GS	WS/GS	WS/GS				

Pilot was sick for 3305 and called in well for C day. They then submitted a WS/GS/GSWC for 3402. As this is sick leave fly back, they are not considered to have flown 3305 for legality purposes.

Scenario #3

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305		3306	3306	3306	3306	
SICK	SICK	SICK	SICK		SICK	SICK	WELL	WELL	
								3404	3404
								WS/GS	WS/GS

Pilot was sick for 3305 and 3306 and called in well for C day of 3306. They then submitted a WS/GS/GSWC for 3404. If they would not have been legal to fly both 3305 and 3404 (30-minute buffer for WS), they will be at the bottom of the WS/GS/GSWC list. However, they are not considered to have flown 3306 for legality purposes, as 3404 is sick leave fly back for 3306.

Scenario #4

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305						
SICK	SICK	WELL	WELL						
			3402	3402	3402		3505	3505	3505
			PCS	PCS	PCS		WS/GS	WS/GS	WS/GS

Pilot was sick for 3305 and called in well for C day. They were then awarded 3402, either through PCS or the Pilot to Pilot Swap Board. They then submitted a WS/GS/GSWC for 3505. Their legality is based upon their actual flying, including 3402. They are not considered to have flown 3305 for legality purposes, as the sick leave from that rotation was flown back by 3402.

Theater Qualification Restrictions on PCS Awards (11 J. 2. e.)

A pilot may be awarded a white slip, yellow slip, green slip, green slip with conflict, or swap with the pot for a rotation that operates in a theater for which they are not qualified, and for which they have requested to be qualified under **Section 11 J. 2.**, with no restriction as to the timing of the award.

The Company will then have the option of assigning an LCP or LVP as appropriate to qualify the pilot in the theater of the rotation, or of subsequently removing the pilot from the rotation with full pay protection. Should such an unqualified pilot be removed from their rotation for this reason after 0700E two days prior to report, that rotation may then only be awarded or assigned to a pilot who is qualified into that theater. When this has occurred, the rotation will show a “P” in the far left column of the rotation on the Daily Trip Coverage report, indicating that an unqualified pilot was previously paid for the rotation.

Example: A pilot whose qualification request into the European theater has not been honored is awarded a GS for a rotation that flies to Europe. If the Company chooses not to qualify the pilot, the rotation will be dropped with pay. So long as the rotation is dropped after 0700E two days prior to report, Crew Scheduling may now bypass any other pilots not qualified to Europe and award this rotation to the most senior qualified pilot.

Note: A pilot may only pick up a rotation that operates to a theater in which they are not qualified from another pilot via the Pilot-to-Pilot Swap Board if the rotation reports at least 96 hours after the transaction is executed.

Inverse Assignment and Inverse Assignment with Conflict (IA and IAWC) (23 R.)

IA and IAWC are same-day or next-day assignments made by Crew Scheduling after other options have been exhausted. These rotations are assigned in inverse seniority order without regard for length of rotation among:

- Reserve pilots for whom the rotation would fly into X-days
- Reserve pilots for whom the rotation would begin on X-days
- Regular pilots

A pilot may not be inversely assigned to an out-of-base rotation, except as the last step in rotation coverage, i.e., any available pilot in the system. In that case, the pilot must be provided the necessary deadhead transportation. A pilot who has been inversely assigned in a bid period will not be inversely assigned a second time until all other pilots who are available and can be contacted have been inversely assigned a like number of times in the bid period. A regular pilot will not be inversely assigned to a rotation that reports less than 11 hours after release at their base without their consent.

A regular pilot who has flown an IA rotation will receive double pay, no credit, for the IA rotation as flown. A reserve pilot:

- will receive single pay, no credit (above the reserve guarantee), for any duty period of an IA rotation that they fly and that interrupts their X-days or after their accumulated credit equals the ALV, and additional time free of duty under **Section 23 S. 11**.
- who is awarded an IA rotation in which all duty periods of the rotation are scheduled to operate on on-call days may request one X-day that coincides with a day on which the pilot does not have a duty period within the IA rotation be moved to the first day of the IA rotation. (For example, a reserve pilot with one X-day on the 12th may be awarded a three-day IA rotation on the 11th which has a 30-hour layover and no duty period touches the 12th. That X-day may be moved to the 11th.)

Some of the basics provisions for IA awards are:

- The pilot must meet any special airport/route qualifications.
- An IAWC award may not conflict with a previous IAWC award.
- There must be ten hours of prospective rest prior to the start of an FDP. A regular pilot is always on rest if there are no assignments on their schedule. A reserve pilot is **ONLY** on rest on an X-day or if on an acknowledged prospective rest period.
- A rotation that conflicts with an IAWC rotation will be removed (in its entirety) with no recovery obligation.
- A pilot who has flown an IAWC rotation will receive single pay and credit for the rotation removed *and* single pay, no credit, for the rotation flown. A number of pay examples are included in **PWA Section 23. U**.
- A pilot who receives an IAWC will be eligible to be awarded/assigned an additional rotation(s) that operates during the period of the removed rotation.

Processing and Notification

- IA/IAWC are manually processed by Crew Scheduling.
- Crew Scheduling will attempt to notify the pilot of the IA/IAWC assignment.
 - Crew Scheduling may use the Crew Auto Notification System for the attempted notification.
 - *The pilot is required to fly the rotation if they acknowledge the assignment.*
 - If unable to contact the pilot, Crew Scheduling will bypass the pilot and move to the next senior pilot.
- A pilot who does not have a requirement to be available for contact is not required to answer an attempted notification from a Crew Scheduler or respond to or acknowledge an attempted notification from the Crew Auto Notification System. If the pilot does answer an attempted notification from a Crew Scheduler, an IA is not a proffer, except under specific circumstances (see the discussion titled “Proffer or Not” in this document).

Trip Awards and Assignments—Proffer or not?

The circumstances under which a pilot is awarded or assigned a trip determine whether that award or assignment is a proffer or whether the pilot is required to accept the trip. White slips, yellow slips, and even inverse assignments can all be proffers under certain circumstances. Although the scheduler should always make clear to the pilot when a rotation assignment is a proffer, the lines of communication can sometimes be less than clear. It is therefore incumbent upon each pilot to be aware of their rights and responsibilities under the PWA.

When an award or assignment is a proffer, the pilot is free to accept or turn down the trip for any reason. When it is not a proffer, the pilot is required to accept the award or assignment if they have been contacted and notified of the award ***and if they are physically able to report as scheduled.***

The Company may attempt to contact a pilot in a variety of ways. The manner used determines the pilot's obligation in their response.

- A pilot who has received a message in person from a Company employee or a representative of the Company has been contacted and must respond.
- A pilot who has acknowledged an award or assignment via iCrew, the Crew Auto Notification System, ARCOS, or the IVR, regardless of their response obligation, has been contacted and is responsible for such award or assignment.
- A pilot has no obligation to be available for contact while on layover. Messages left with hotel personnel or on a hotel room voice mail do not constitute contact. The FAA has determined that the Company can contact a flight crewmember one time during a required rest period. Once contact is made, it cannot be made again without interrupting the rest period. That interruption would restart the required rest period. However, the flight crewmember is under no obligation to answer the telephone or contact the air carrier during a rest period. In any case, a pilot who is contacted while on layover is required under regulations to consider the effect of interrupted rest on their next scheduled report and duty period.
- ACARS and radio messages (from ATL Radio or Ramp Tower, for example), if received *and* acknowledged, constitute contact. A pilot must judge their ability to respond according to operational demands in the cockpit, Company policy and FARs. If unable to respond during the flight, a member of the crew must contact Crew Tracking after arrival at the gate. ACARS and radio messages may be used by Crew Tracking for reroute notification but will not be used for trip coverage by Crew Scheduling.
- Pages in the airport or crew lounge and notes left in lockers or mail folders do not constitute contact.

A pilot who has no contact responsibility has no obligation to respond to messages left with another person or on voice mail. Furthermore, they have no obligation to acknowledge any change to their schedule, with the following exceptions:

- A regular pilot awarded a swap with the pot (SWP) or white slip (WS) or recovery slip (RS) during an automated PCS run will be responsible for such flying and will not receive telephone notification of the award. This includes all SWP transactions, all WS and RS transactions for beyond next day flying, and WS and RS transactions for next day flying that are awarded during the 0700 PCS run.
- A pilot who is awarded a swap/pick-up via the Pilot-to-Pilot Swap Board is responsible for such flying.

The following tables describe when an award or assignment is or is not a proffer.

White Slip	
Same/next/second-day rotation or VAS (other than second-day rotation or VAS awarded during the 0700 automated PCS function)	Proffer
Beyond-second-day rotation or VAS (or second-day rotation or VAS awarded during the 0700 automated PCS function)	Not a proffer. Pilot is obligated to ascertain whether their WS request has been granted, acknowledge their award and report for the rotation or VAS period .
Standby Rotation	Proffer

Recovery Slip	
Same-day rotation or VAS	Proffer
Next/second-day rotation awarded during manual trip coverage	Not a proffer
Beyond-second-day rotation or VAS (or second-day rotation or VAS awarded during the 0700 automated PCS function)	Not a proffer. Pilot is obligated to ascertain whether their RS request has been granted, acknowledge their award and report for the rotation or VAS period .

Swap with the Pot or Pilot-to-Pilot Swap Board	
Not a proffer. Pilot is obligated to ascertain whether their request has been granted, acknowledge their award and fly the rotation.	

Yellow Slip	
Report 18 hours or less from first attempted contact	Long-call pilot at time of report or start of short call period – proffer. If the pilot is not in a contactable status and does not respond to attempted contact within 12 minutes, the rotation or short call will be removed from their line. Short-call pilot at time of report—not a proffer.
Report more than 18 hours from first attempted contact	Not a proffer if contacted. If a pilot is not in a contactable status and does not respond to attempted contact within 12 minutes, the rotation or short call will be removed from their line.
Reserve with Conflict award	Proffer
Standby Rotation	Proffer
Same/next/second-day VAS (other than second-day rotation awarded during the 0700 automated PCS function)	Proffer
Beyond-second-day VAS (or second-day VAS awarded during the 0700 automated PCS function)	Not a proffer. Pilot is obligated to ascertain whether their YS request has been granted, acknowledge their award and perform the VAS.

Reserve Assignment (other than YS as referenced in above table)
Not a proffer

Green Slip
Proffer

Inverse Assignment	
Regular pilot for whom the report is within 11 hours of their release at their base	Proffer
Long-call reserve pilot for whom the report is within 18 hours from first attempted contact	Proffer
All others	Not a Proffer

Do I have to accept the trip?

A pilot is considered to have accepted a proffer if they have verbally accepted the assignment from a scheduler or acknowledged the rotation via IVR, the Crew Auto Notification System, ARCOS, or iCrew. When speaking to a scheduler, a pilot should ascertain whether or not the award or assignment is a proffer and, if unsure, should simply ask the scheduler.

A pilot's obligation to accept a trip on X-days or regular line off days is not absolute, regardless of whether the trip is or is not a proffer. A variety of circumstances might prevent a pilot from accepting a trip.

For example:

- Not being physically located so as to be able to report.
- Having recently consumed alcohol.
- Lack of available child care.
- Lack of available transportation.
- Not being adequately rested. For example:
 - A pilot, not on call, notified of a rotation with a report time within ten hours should consider if they are sufficiently rested to accept the scheduled rotation.
 - A pilot is not required to accept an inverse assignment that does not allow for ten hours of rest between acknowledgement and report time for the assigned rotation.

Be polite and professional in your dealings with Delta personnel. If necessary, call your Chief Pilot for assistance.

GS/IA Pay for Reserve Pilots (23 U. 1. b. & c. & 23 U. 3. b. & c.)

Sections 23 U. 1. b. and 3. b. of the PWA state:

A reserve pilot who has flown a GS rotation(s) will receive:

- 1) single pay and credit for the portion of such rotation(s) flown on their reserve on-call days that occurred before the pilot's accumulated credit exceeded the ALV (applied against their reserve guarantee), and
- 2) single pay, no credit (in addition to any other form of pay and credit for the bid period) for the portion of such rotation(s) that:
 - a) interrupted their X-day(s), or
 - b) occurred after their accumulated credit equaled the ALV,

Note: A reserve pilot who flies a GS rotation into an X-day(s) is entitled to additional time free of duty under **Section 23 S. 9.**

A reserve pilot who has flown an inversely assigned rotation(s) will receive:

- 2) single pay and credit for the portion of such rotation(s) flown on their reserve on-call days (applied against their reserve guarantee), and
- 3) single pay, no credit for the portion of such rotation(s) that interrupted their X-day(s) (in addition to any other pay and credit for the bid period).

Note: A reserve pilot who flies an inverse assignment rotation into an X-day(s) is entitled to additional time free of duty under **Section 23 S. 9.**

To determine the portion of a GS/IA rotation that has been flown on a reserve pilot's X-day(s), the rotation is broken down into individual duty periods. Any duty period that touches an X-day will generate single pay, no credit (above the guarantee), while a duty period that does not touch an X-day will generate single pay and credit (toward the guarantee).

This is an important detail. Consider the following rotation:

```
ATL      PILOT 777      *** ROTATION OPER      13JUL/16:02 GMT
1102     POS-AR/B      EFFECTIVE 03AUG07      CHECK IN AT 9.55

ROTATION REMARKS NOT SUPPORTED THROUGH THIS OPTION
A
B
END OF DISPLAY
```

A reserve pilot who is on call August 1-4, has X-days August 5-6, and is on call again on August 7, will receive no premium pay. Under **Section 12 M. 6.**, a published X-day begins at midnight (pilot base time). The first duty period of this rotation reports on August 3 at 0955E and releases in ICN 14:45 + 2:00 later, on August 4 at 0240E. The second duty period reports on August 7 at 0335E and release 13:45 + 2:00 later, at 1920E.

Because neither of the two duty periods in this rotation interrupts the pilot's X-days on August 5-6, they will receive no premium pay as the rotation currently stands.

The purpose for **Note two** in both **Sections 23 U. 1. b.** and **3. b.** is to allow a reserve pilot in a case such as this to move one of the X-days within the rotation to the first day of the rotation. This will

cause the first

duty period of the rotation to generate single pay, no credit (above the guarantee). In the example above, the pilot may move their X-day on August 5 or 6 to August 3, thereby causing the value of that duty period (14:45) to be single pay, no credit (above the guarantee).

In any case, their X-days will be moved (paid back) so as to begin 13 hours after their release on August 7 at 1920E.

A reserve pilot on an X-day who has been awarded a GS/IA that is subsequently removed will receive a minimum of two hours pay, no credit and additional time off under **Section 23 S. 11**. if the pilot:

- Has not acknowledged the removal from the rotation, and
- Reports for duty (GS/IA) on an X-day.

This pay, no credit is above the pilot's reserve guarantee and does NOT apply if the GS/IA is for a long call pilot reporting in less than 18 hours on an on call day.

X-Days Beginning at other than Midnight (aka: PB/PR Days) (23 S. 11. - 14. & 16.)

A reserve pilot who flies on an X-day due to IA, GS, or reroute will be given nine hours free of duty upon their release, at which point their X-day(s) will begin and continue until they have received 24 hours free of duty for interrupted and remaining X-day in their scheduled block.

Exceptions:

- If the reserve pilot was flying an ocean crossing, their X-day(s) will begin 13 hours after their release
- If the reserve pilot flew into an X-day due to late operations or if their IA or GS was cancelled, their X-day(s) will begin immediately upon their release

Each of these scenarios will *normally* result in the pilot's X-days beginning at other than midnight. Because the iCrew calendar is unable to display calendar events beginning at times other than midnight, Crew Scheduling uses the PB/PR designators instead. Each PB represents a complete calendar day on which the pilot has an X-day, and a PR represents the latter portion of the final X-day, encompassing only a portion of that calendar day.

Examples

The following examples are intended to illustrate the way X-days are moved under several different circumstances and how this is displayed on a pilot's schedule. For each scenario, please assume that the GS rotation(s) does not interrupt an X-day with an ocean crossing.

Scenario #1

Date	7	8	9	10	11	12	13	14	15	16
Pilot Schedule	RES	X	X	X	RES	RES				
GS Rotation 3305	3305 A	3305 B	3305 C							
Report/Release			Release at 1200							
Result				PB	PB	PR ending at 2100				

In this scenario, the pilot flies GS rotation 3305, a three-day trip reporting on the 7th. This rotation interrupts two of their three X-days, causing the entire block to be moved to begin at 2100 on the 9th - nine hours after their 1200 release from the GS rotation. Their block of X-days will now end 24 hours x 3 (2 interrupted X-days; 1 remaining X-day) = 72 hours later, at 2100 on the 12th.

This is signified by PB on the 10th and 11th and PR ending at 2100 on the 12th.

Scenario #2

Date	7	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	X	RES	RES	RES	X	X	RES	
GS Rotation 3306	3306 A	3306 B	3306 C	3306 D						
Report/Release				Release at 0900						
Result					PB	PB	PB	PB	PR ending at 1800	

In this scenario, the pilot flies GS rotation 3306, a four-day trip reporting on the 7th. This rotation interrupts their three X-days, causing the entire block to be moved to begin at 1800 on the 10th - nine hours after their 0900 release from the GS rotation. Their block of X-days will now end 24 hours x 3 interrupted X-days = 72 hours later, at 1800 on the 13th. However, this causes their X-days on the 13th and 14th to be moved as well, such that their entire block of X-days now ends 24 hours x 5 (3 interrupted X-days; 2 remaining X-days) = 120 hours later, at 1800 on the 15th.

This is signified by PB on the 11th through the 14th and PR ending at 1800 on the 15th.

Scenario #3

Date	7	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	X	RES	RES	RES	X	X	RES	RES
GS Rotation 3307	3307 A	3307 B	3307 C							
Report/Release			Release at 1100							
Result				PB	PB	PR ending at 2000				
GS Rotation 3308					3308 A	3308 B				
Report/Release					Report at 2100	Release at 1800				
Result				PB	PB	PB	PB	PB	PB	PR ending at 0300

In this scenario, the pilot flies GS rotation 3307, a three-day trip reporting on the 7th. This rotation interrupts their three X-days, causing the entire block to be moved to begin at 2000 on the 9th - nine hours after their 1100 release from the GS rotation. Their block of X-days will now end 24 hours x 3 interrupted X-days = 72 hours later, at 2000 on the 12th.

This is initially signified by PB on the 10th and 11th and PR ending at 2000 on the 12th.

They then fly GS rotation 3308, a two-day trip reporting at 2100 on the 11th. This rotation interrupts the X-day that begins at 2000 on the 11th. That X-day will now be moved so as begin at 0300 on the 13th - nine hours after their 1800 release from the 2nd GS rotation. However, this causes their X-days on the 13th and 14th to be moved as well, such that their entire block of X-days now ends 24 hours x 3 interrupted X-days = 72 hours later, at 0300 on the 16th.

This is all collectively signified by PB on the 10th through the 15th and PR ending at 0300 on the 16th.

Scenario #4 (The subsequent award's scheduled report time is *after* the end of the PR)

Date	7	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	X	RES	RES	RES	X	X	RES	RES
GS Rotation 3309	3309 A	3309 B								
Report/Release		Release at 0700								
Result			PB	PB	PR ending at 1600					
GS Rotation 3310					3310 A	3310 B	3310 C			
Report/Release					Report at 1800		Release at 1800			
Result			PB	PB	PR			PB	PB	PR ending at 0300

In this scenario, the pilot flies GS rotation 3309, a two-day trip reporting on the 7th. This rotation interrupts two of their three X-days, causing the entire block to be moved to begin at 1600 on the 8th - nine hours after their 0700 release from the GS rotation. Their block of X-days will now end 24 hours x 3 (2 interrupted X-days; 1 remaining X-day) = 72 hours later, at 1600 on the 11th.

This is initially signified by PB on the 9th and 10th and PR ending at 1600 on the 11th.

They then fly GS rotation 3310, a three-day trip reporting at 1800 on the 11th. This rotation does NOT interrupt the X-day that begins at 1600 on the 10th but does interrupt one of their next two X-days. Those two X-days will be moved so as begin at 0300 on the 14th - nine hours after their 1800 release from the 2nd GS rotation. Their block of X-days will now end 24 hours x 2 (1 interrupted X-day; 1 remaining X-day) = 48 hours later, at 0300 on the 16th.

This is all collectively signified by PB on the 9th and 10th, PR on the 11th, PB on the 14th and 15th and PR ending at 0300 on the 16th.

Scenario #5 (The subsequent award's scheduled report time is *prior* to the end of the PR)

Date	7	8	9	10	11	12	13	14	15	16	17
Pilot Schedule	X	X	X	RES	RES	RES	X	X	RES	RES	RES
GS Rotation 3309	3309 A	3309 B									
Report/Release		Release at 0900									
Result			PB	PB	PR ending at 1800						
GS Rotation 3310					3310 A	3310 B	3310 C				
Report/Release					Report at 1600		Release at 1800				
Result			PB	PB	PB			PB	PB	PB	PR ending at 0300

In this scenario, the pilot flies GS rotation 3309, a two-day trip reporting on the 7th. This rotation interrupts two of their three X-days, causing the entire block to be moved to begin at 1800 on the 8th - nine hours after their 0900 release from the GS rotation. Their block of X-days will now end 24 hours x 3 (2 interrupted X-days; 1 remaining X-day) = 72 hours later, at 1800 on the 11th.

This is initially signified by PB on the 9th and 10th and PR ending at 1800 on the 11th.

They then fly GS rotation 3310, a three-day trip reporting at 1600 on the 11th. This rotation DOES interrupt the X-day that begins at 1800 on the 10th in addition to one of their next two X-days. Those three X-days will be moved so as begin at 0300 on the 14th - nine hours after their 1800 release from the 2nd GS rotation. Their block of X-days will now end 24 hours x 3 (2 interrupted X-days; 1 remaining X-day) = 48 hours later, at 0300 on the 17th.

This is all collectively signified by PB on the 9th through 11th, PB on the 14th through 16th and PR ending at 0300 on the 17th.

Scenario #6 (Assume the current bid period ends on the 30th)

Date	25	26	27	28	29	30
Pilot Schedule	X	X	X	RES	RES	RES
GS Rotation 3306	3306 A	3306 B	3306 C	3306 D		
Report/Release				Release at 0900		
Result					PB	PB

In this scenario, the pilot flies GS rotation 3306, a four-day trip reporting on the 25th. This rotation

interrupts their three X-days, causing the entire block to be moved to begin at 1800 on the 28th - nine hours after their 0900 release from the GS rotation. Their block of X-days will now end 24 hours x 3 interrupted X-days = 72 hours later, at 1800 on the 31st (current bid period ended on the 30th). However, since part of their last X-day is into the subsequent bid period, that remaining X-day will be placed into their PB day bank, which will be annotated on the timecard as, "NBR PAYBACK DAYS AVAILABLE FOR USE: 1."

This is signified by PB on the 29th and the 30th and one PB placed into their current bid period's PB day bank. Of note, although the last X-day would have resulted in a PR, any PR will be converted to a full additional day off and will be placed into the pilot's PB day bank.

As noted above, these scenarios all assume that none of the GS rotations end with an ocean crossing. Were that the case, the applicable X-days would have been moved so as to begin 13 hours after the pilot's release.

Summary

It is important to understand that applying additional days off as outlined under **Section 23 S. 11. - 14.** of the PWA is a 100% manual process that relies on each individual scheduler to accomplish the math and apply your additional days off correctly. The Scheduling Committee *highly* recommends that you review your additional days off, and immediately call Crew Scheduling with any questions or corrections.

Although the scheduler may place the additional days off on your schedule at the same time of the award, realize that the additional days off don't apply until you complete your rotation. Since this is a manual process, the end time of your final additional day off is calculated based on your **scheduled** release time. If you release beyond your scheduled release due to a reroute, late operations, etc., then you must call Crew Scheduling and request a scheduler to manually update your end time.

Finally, don't forget that these PB and PR days are simply X-days that begin at other than midnight. As such, your last non-fly day obligations under **Section 23 S. 2.** of the PWA are based on the end of these X-days, i.e., the end of your PR day.

Pay Back Day Usage

Pilots receive banked payback (PB) days for a variety of reasons. They are usually the result of a green slip, inverse assignment, reroute, or late operations awarded over the X-days of a reserve pilot who does not have enough reserve on-call days remaining in the current bid period to move the interrupted X-days. The Company also give PB days to pilots scheduled for an excess training day under **Section 11 F. 19.** or certain other circumstances.

Regardless of how you earn them, you can use PB days to drop a rotation or remove reserve on-call day(s), or you can convert them to additional vacation (SUPP) days for the current or subsequent vacation year. **Section 23 S. 16.** describes the use of PB days as follows:

*A reserve pilot who is eligible for an additional day(s) off under **Section 23 S. 11.** through **14.** will:*

- a. take such day(s) off in the current or a future bid period, by mutual agreement with Crew Scheduling, or*
- b. have such day(s) added to a current year vacation period(s), by mutual agreement with Vacation Planning, or*
- c. have such day(s) added to their earned vacation for the next vacation year, if not used in the current vacation year.*

Dropping a Rotation(s) or On-Call Day(s)

Throughout the year, you may drop rotations or reserve on-call days using your available PB days through PCS. To start, navigate to PCS → Leave Requests → Payback Days in iCrew. First, just as when you request a personal drop (PD), using PB days requires that there is sufficient reserve coverage to drop the rotation(s) or on-call day(s). When dropping a rotation(s), the template will ask you to enter the number of PB days you wish to use, up to the number of PB days you have available or the length of each rotation, whichever is less. If you choose fewer PB Days than the length of the rotation(s) being dropped, the system will automatically place that PB Day(s) on the earliest day(s) of the rotation(s). You are then paid for that portion of the dropped rotation(s) or the whole rotation(s) if the PB Days cover it entirely.

Note: Credit and/or pay, no credit items such as rotation credit, ADG, Extended Duty Period Pay, Sit Pay, etc. all pay on the last day of a rotation. If your PB Days do not extend to the last day of the rotation, you will not receive pay for these items and will only receive the pay associated with the day(s) covered by the PB Day(s) applied.

For example, suppose you wish to drop the following rotation using a single PB day:

```
#P161 MO                EFFECTIVE FEB. 07-FEB. 21                CHECK-IN AT 10.55

If you wish to use PB days to drop reserve on-call days, your reserve guarantee remains unchanged. However, the dropped on-call days are treated identically to X-days. The Company will credit you with a reserve pro-rata share of the guarantee (1/16, 1/17, or 1/18, as applicable) toward your guarantee for each on-call day dropped with a PB day.

Once awarded, PB days are shown as TOFF on your schedule.

Note: Bear in mind that the pay generated by a TOFF day is pay and credit, meaning that it applies to both your WS pickup limit and to the GS pay trigger.

WARNING: Do NOT submit a PD request in lieu of a PB Day request with the intent of later applying a PB Day(s) to the PD award. Such a retroactive PB Day request will be denied.

Multiple TOFF Days

As long as you do not exceed the WS pickup limit, there is no restriction on the number of times you may WS and then use PB days to drop a rotation. Note that there is no contractual pickup limit that applies to adding time via Swap with the Pot or the Pilot to Pilot Swap Board.

The issue arises when a pilot uses multiple PB Days on the same calendar day. Because iCrew is limited to only two activities on any given day, when a pilot uses more than one PB Day on a given day of the bid period, iCrew will indicate, in a single column, the number of TOFFs that apply on that day. The first PB Day will cause TOFF to show. The second PB Day will cause the TOFF to be replaced with TOF2. The third will cause TOF2 to be replaced with TOF3, and so on, up to TOF9.

If the pilot applies a tenth PB Day to that calendar day, the system will automatically look for the earliest available day in the bid period and begin to track PB Days from TOFF to TOF9 on that day, using multiple days as needed. This could either be on an earlier day than that of the dropped rotation or on a later day.

Example 1 - PB Day on a One-Day Rotation Ten Times

The following pilot has multiple PB Days in their bank and is scheduled to fly ATL rotation 0230 on April 5, a one-day trip worth 5:15. If the pilot uses a PB Day to drop that rotation and a WS to pick it up again, their schedule and time card will look as shown below.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE	DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG
01S	REG																	01S	05APR	REG	0230	3:49	5:15	5:15	5:15	OPEN
02S	REG																	02S	05APR	REG	TOFF			5:15	5:15	OPEN
03M	REG																	03M	30APR	REG	6287	16:31	21:00	21:00	16:31	OPEN
04T	REG																	04T								
05W	REG			TOFF	0230				0230	W		0850					1449	05W								
06T	REG																06T									

If the pilot uses a second PB Day to drop the trip and again picks it back up, their schedule will look as shown below. The TOF2 on both the schedule and the time card indicate that two PB Days have been used.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE	DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG

02S	REG																	02S	05APR	REG	TOF9			47:15	47:15	OPEN
03M	REG																	03M	30APR	REG	6287	16:31	21:00	21:00	16:31	OPEN
04T	REG																	04T								
05W	REG			TOF9	0230				0230	W		0850					1449	05W								
06T	REG																06T									

If the pilot now drops and picks up the trip a tenth time, the system will find the earliest available day in the bid period (April 1, in this case) to show the tenth TOFF.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE	DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG
01S	REG			TOFF														01S	01APR	REG	TOFF			5:15	5:15	OPEN
02S	REG																	02S	05APR	REG	0230	3:49	5:15	5:15	5:15	OPEN
03M	REG																	03M	05APR	REG	TOF9			47:15	47:15	OPEN
04T	REG																	04T	30APR	REG	6287	16:31	21:00	21:00	16:31	OPEN
05W	REG			TOF9	0230				0230	W		0850					1449	05W								
06T	REG																06T									

Note that the TOF9 on April 5 of the time card above reflects the full value of the nine PB Days that were used to drop the rotation nine times and the TOFF on April 1 reflects the value of tenth PB Day that was used to drop that same rotation.

Example 2 - Multiple PB Days on a Three-Day Trip Three Times then Picking Up New Trip

The following pilot has multiple PB Days in their bank and is scheduled to fly ATL rotation 0236 on

April 4, a three-day trip worth 15:45. If the pilot uses three PB Days to drop that rotation and a WS to pick it up again, their schedule and time card will look as shown below. The pilot's schedule will always show the number of PB Days that were used. However, the time card will only reflect the value of the trip(s) that have been dropped with those PB Days; the number of TOFFs on the time card will not necessarily reflect the number of PB Days used, nor will they necessarily be on each date of the dropped rotation.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE
01S	REG																	01S

04APR	REG	0236	10:56	15:45	15:45	15:45	OPEN
04APR	REG	TOFF			9:59	9:59	OPEN
04APR	REG	TOFF			5:46	5:46	OPEN

If the pilot again uses three PB Days to drop the rotation and a WS to pick it up, their schedule and time card will look as shown below. Note that, in this case, only the first of the TOFFs is counting multiple PB Days used. The TOF4 represents the TOFF on A Day used to drop the rotation the first time, plus the three TOFFs used to drop the rotation second time.

The pilot's time card shows only the TOF4 from A Day of the rotation but reflects the **full value** of the two times the rotation was dropped. Although the two TOFFs on B and C Days of the rotation do not show on the Time Card, **their value is included in the value of the TOF4**.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE

05W	REG		TOFF	----				----	W									05W
06T	REG		TOFF	----				----	W								0627	06T
07F	REG																	07F

DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG
	DES	NBR	HRS	TIME	TIME		STAT
04APR	REG	0236	10:56	15:45	15:45	15:45	OPEN
04APR	REG	TOF4			31:30	31:30	OPEN

If the pilot now uses three PB Days to drop rotation 0236 again and picks up a new two-day trip - ATL rotation 0238 on April 4 - their schedule will look as shown below.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE
01S	REG																	01S
02S	REG																	02S
03M	REG																	03M
04T	REG		TOF7	0236				0238	W			0614						04T
05W	REG		TOFF	----				----	W								1040	05W
06T	REG		TOFF	----														06T
07F	REG																	07F

Again, their time card will only show TOF7 on April 4, but the TOF7 will reflect 47:15 - the full value of having dropped ATL 0236 three times.

Example 3 - Two PB Days on Two-Day Rotation Twice - Same Depart Date

Building on Example 2, if the pilot now drops ATL rotation 0238 using two PB Days and picks it up again, their schedule and time card will look as shown below.

DTE	OR	DES	OF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE
01S	REG																	01S
02S	REG																	02S
03M	REG																	03M
04T	REG		TOF9	0236				0238	W			0614						04T
05W	REG		TOFF	----				----	W								1040	05W
06T	REG		TOFF	----														06T
07F	REG																	07F

DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG
	DES	NBR	HRS	TIME	TIME		STAT
04APR	REG	TOF9			57:45	57:45	OPEN
04APR	REG	0238	9:59	10:30	10:30	10:30	OPEN

The TOF9 on the pilot's schedule, together with the two TOFFs represent the 11 PB Days the pilot has now used. The TOF9 on their time card carries the full value of the three times they dropped 0236 (worth 15:45) plus the one time they dropped 0238 (worth 10:30) for a total value of $15:45 \times 3 + 10:30 = 57:45$.

If the pilot now again drops 0238 using two PB Days and picks it back up, their schedule and time card will look as shown below. Having reached TOF9 on April 4, the system will look for the earliest available date on which to place the two additional TOFFs, in this case, April 1. In all, this pilot has used 13 PB days thus far.

DTE	OR	DES	OFF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE

Example 4 - Six PB Days on 3-Day Trip Then Four PB Days on 2-Day Trip Departing Later Date

The following pilot has 20 PB Days in their bank and is scheduled to fly ATL rotation 0672 on April 19th, a three-day trip worth 16:20. If the pilot uses three PB Days to drop that rotation and a WS to pick it up again, their schedule and timecard will look as it always has.

DTE	OR	DES	OFF	STAT	ROT1	D	R1	STAT	ROT2	D	R2	RPT1	RPT2	E/L	R	CALL	BLKN	DTE
17M	REG																	17M

19W	REG			TOF4	0672													19W
20T	REG			TOF5	----				0671	W		1535						20T
21F	REG			TOFF	----				----	W							1515	21F

DATE	DAY	ROT	BLOCK	SKED	PAY	CREDIT	LOG
	DES	NBR	HRS	TIME	TIME		STAT
19APR	REG	TOF4			32:40	32:40	OPEN
20APR	REG	0671	8:40	10:30	10:30	10:30	OPEN
20APR	REG	TOF5			21:00	21:00	OPEN

To reiterate, a pilot can always tell the number of PB Days they have used by viewing the total number of TOFFs on their schedule display, and their time card will always show the total pay they are receiving from the PB Days they have used. If more than 9 PB Days used on single day, the credit will display on separate line on timecard as shown in example 3.

Insufficient Reserve Coverage for PD

Insufficient reserve coverage for a normal PD over the days of a rotation or reserve on-call days you are trying to drop will keep you from being awarded a Payback Day drop request. To circumvent this, you have several options.

First, you may use your Authorized Personal Drop (APD) or one of your Individual Vacation Day (IVD) events to drop rotation(s) or on-call day(s). Your line will initially show no pay for the APD or

only the applicable pay for the IVD. You can then use the form at [Deltanet → Our Company → Flight Operations → Crew Resources/Scheduling](#) in the Crew Scheduling column under MISC to request that a specified number of PB days be applied to available days of the rotation as TOFF days. All normal APD and IVD PWA provisions still apply, and once you use your APD and/or IVDs for this purpose, you are considered to have used them until replenished/reset per the PWA.

Note: A PB Day cannot be applied on an IVD day. You must ensure that you apply an IVD only to a day(s) of the rotation you do not plan to apply a PB Day. Further, if you use either of these options, remember that you become ineligible to be awarded or assigned other flying on a day(s) on which APD or IVD appears on your schedule.

For example, suppose you wish to use a single PB day to drop a rotation and **receive pay for A Day**. Unfortunately, you recognize there is insufficient reserve coverage for a PD, but there is enough for an APD or IVD. You may drop the rotation by placing your APD on any day of the trip or by placing an IVD(s) on B, C, or D Day of the rotation as desired. Once the request has been awarded, you can then submit your request to apply a PB Day to A Day of the rotation with the form at [Deltanet → Our Company → Flight Operations → Crew Resources/Scheduling](#) in the Crew Scheduling column under MISC, as shown below.

Payback Day Request

This form is to be used to reduce the number of payback days used to drop a trip or to pay protect a trip dropped with an APD or IVD that has been processed through PCS. Please include your name, employee number, the date of the rotation or on call days dropped, and what you are requesting to be done.

*****REMINDERS***** To request a drop using PB days please utilize PCS payback day leave option to submit your request, not a personal drop. Your off day request must have been awarded through PCS prior to submitting this form. Trip drop requests submitted via this form will be denied as they must be awarded through PCS. When requesting to use fewer TOFF days than awarded, remember that TOFF's will be placed consecutively starting on "A" day of the rotation.

Attention: News on new automation found [HERE](#).

Award date

Rotation dropped

How many PB days were awarded?

Do you want to use PB or SUP day(s)?

How many day(s) to use?

Comments
Please detail your specific request.

☐ Send me a copy of my responses

As in the earlier example, Delta will pay you the value of A day for the TOFF Day, plus the applicable value of any IVDs you have used. Finally, you will be ineligible to be awarded or assigned other flying on the day(s) on which the APD(s) or IVD(s) were placed.

Alternatively, you may simply submit a PB Day request when seeking to drop a rotation (but not an on call day). If the PB day request is denied due to insufficient reserve coverage, the rotation will appear as qualified open time. If another pilot is then awarded your rotation via their white slip or swap with the pot, either in the same or a subsequent PCS run, your PB day request will be awarded.

PB Day Added to Current Year Vacation

You can request to add PB days to a vacation period in the current vacation year by contacting Crew Resources with the form at [Deltanet > Our Company > Flight Operations > Crew Resources/Scheduling](#) > Crew Resources, Training Planning & OE Contacts. If Crew Resources agrees, your vacation bank will be increased by 4:35 per day added, and the days will be paid just as any other vacation days are paid.

PB Day Conversion to SUPP Day

On January 1 of each year, any PB days remaining in one's bank are automatically converted to supplemental (SUPP) vacation days. Your PB day bank reverts to zero, and a new line appears on your time card showing the number of SUPP days available, so long as that number is greater than zero. If you earn new PB days beginning in January, these again show in your PB day bank.

For example, the time card below is that of a pilot who had accumulated four PB days by December 31.

VAC TIME IN	VAC DAYS IN	VAC PAYOFF	VAC TIME OUT	VAC DAYS OUT
49:00	14	0:00	45:30	13
AUTHORIZED PERSONAL DROP AVAILABLE FOR USE: Y				
NBR PAYBACK DAYS AVAILABLE FOR USE: 4				

On January 1, those four PB days would be converted to SUPP days, and the pilot's time card updated accordingly.

VAC TIME IN	VAC DAYS IN	VAC PAYOFF	VAC TIME OUT	VAC DAYS OUT
49:00	14	0:00	45:30	13
AUTHORIZED PERSONAL DROP AVAILABLE FOR USE: Y				
NBR PAYBACK DAYS AVAILABLE FOR USE: 0				
NBR SUPP DAYS NEXT YR AVAILABLE FOR USE: 4				

If the pilot then earned two additional PB days, for example in January, the pilot's time card would again be updated accordingly.

VAC TIME IN	VAC DAYS IN	VAC PAYOFF	VAC TIME OUT	VAC DAYS OUT
49:00	14	0:00	45:30	13
AUTHORIZED PERSONAL DROP AVAILABLE FOR USE: Y				
NBR PAYBACK DAYS AVAILABLE FOR USE: 2				
NBR SUPP DAYS NEXT YR AVAILABLE FOR USE: 4				

Even SUPP days added to a pilot's vacation award for the following year can be reconverted back to payback days for use through March 31. For that reason, the number of SUPP days showing that a pilot has available remains unchanged on their time card until the pilot uses them as PB days, or March 31 arrives, whichever occurs first. SUPP days may be:

- Added onto awarded vacations for the current vacation year by mutual consent with Crew Resources as outlined earlier in this chapter
- Added onto awarded vacations for the subsequent vacation year, with certain restrictions (this occurs automatically when the pilot's last vacation week is awarded) under **Section 7 E. 4.**

- Used as Payback Days to drop a rotation(s) or on-call day(s) with pay from January 1 through March 31

Using SUPP Days as Payback Days

Between January 1 and March 31, if you navigate to PCS → Leave Requests → Payback Days in iCrew to drop a rotation or on-call days, the system will default to using SUPP days first, as these become unavailable for use as PB days on March 31. If you wish to use recently earned PB days instead, or again, use fewer PB or SUPP days than the automated system has used, you can make that request via the form in DeltaNet, as shown below.

Payback Day Request

This form is to be used to request payback day usage.

Please include your name, employee number, the date of the rotation or on call days dropped, and what you are requesting to be done.

Name

Employee Number

Category
Please include base, equip and position

Request Type

Award date

Rotation dropped

How many day(s) to use?

Comments
Please detail your specific request.

As throughout the remainder of the year, if reserve coverage is inadequate for a PD to be awarded, you may drop the rotation or reserve on-call days via your APD or IVD and then use the form in DeltaNet to request that a desired number of PB or SUPP days be applied to the drop.

Note that SUPP days remain available for use in this manner through March 31 regardless of whether they have been added to a pilot's vacation for the following vacation year. (Recall that SUPP days will automatically be added to a pilot's last awarded vacation, if they have not bid to add them to a prior vacation award. Please see the chapter on Vacations in the Scheduling Reference Handbook for details.)

Example:

- On January 1, a pilot's four remaining PB days are converted to SUPP days. The pilot's PB day bank balance now shows zero, and their SUPP day balance shows four.
- In January, the pilot holds a reserve line and earns four new PB days by flying a GS rotation over X-days that cover the last four days of the January bid period. The pilot's PB day bank balance now shows four, and their SUPP day balance remains at four.
- The pilot bids to add their four SUPP days to the end of their TVAC, which is awarded on February 3. The pilot's SUPP day balance remains at four for now, as these four SUPP days remain available to be used as PB days through March 31.
- After initial line awards for March, the pilot desires to use their four SUPP days to drop a four-day rotation in March. They navigate to PCS → Leave Requests → Payback Days in iCrew, and enter the rotation they wish to drop. The rotation is dropped with pay, assuming there is enough reserve coverage, and the pilot's SUPP day balance drops to zero. The four SUPP days are removed from their TVAC by Crew Resources within the following few days.

- If the pilot does not use their SUPP days to drop a rotation(s) or reserve on-call day(s) by March 31, their SUPP day balance disappears from their time card, and those days remain attached to the pilot's TVAC as awarded.

Swapping Trips/X-Day Move Formula (23 V. 3. - 5.)

For a detailed description of how to enter a Swap with the Pot or X-days move request, see the iCrew User's Guide published separately in the ALPA folder of your EFB.

The Basics

If a pilot wishes to swap out of a trip or to move an X-day(s) to a day(s) in which there is sufficient reserve coverage (Reserves Available greater than Reserves Required), the request will be awarded, provided FAR and other PWA requirements have been met. Otherwise, the formula described in **Section 23 V. 5.** is used. This formula serves to allow swapping a trip out of, or moving an X-day(s) into, a day(s) in which Reserves Available (A) is less than Reserves Required (R), so long as the pilot will now be working on a day that is even worse off with respect to reserve coverage.

Days on which A is equal to R do NOT require a day that is worse off with respect to reserve coverage. Note the Thanksgiving/Christmas exception below.

Only the day(s) on which a pilot will be off if the requested transaction is awarded (Day(s) to Be Dropped), and only the day(s) on which a pilot will be working if the requested transaction is awarded (Day(s) to Be Added) are considered. Overlapping days in a SWP or X-day move transaction (days on which a pilot will be working either way) are not considered for purposes of reserves coverage.

For example, assume a pilot wishes to swap a four-day trip reporting on the 15th of the month for a four-day trip reporting on the 17th of the month. The Days to Be Dropped would be the 15th and 16th and the Days to Be Added would be the 19th and 20th. Reserve coverage on the 17th and 18th are neither Days to Be Dropped nor Added and are therefore irrelevant with respect to reserve coverage.

Be aware that a trip that releases after midnight is considered to operate on that following day. This means that the following day would be a Day to Be Dropped when attempting to swap out of that trip. Also, Qualified Open Time, i.e., a trip that is marked with a Q is not actually in open time. To swap into such a trip, reserve coverage on all the days of your current trip would have to be positive (A greater than R).

There are two ways in which the formula is applied:

- Cumulatively, when the pilot is seeking to drop a day(s) that does not fall within an APD holiday period
- Day-by-day, when the pilot is seeking to drop a day(s) that falls with an APD holiday period.

Note: An APD holiday period is defined in PWA **Section 23 I. 10. a. Exception** as the four-day period beginning two day prior to any of the following holidays:

- New Year's Day
- Super Bowl Sunday
- Good Friday
- Easter Sunday
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving
- Christmas Day

Non-Holiday (Cumulative) Application

Under the cumulative application, in which no Day to Be Dropped touches an APD holiday period, the total shortage on all Day(s) to Be Dropped on which there is negative reserve coverage (A less than R) will be compared to the total shortage on all Day(s) to Be Added on which there is negative reserve coverage. If the total coverage on the negative Day(s) to Be Added is worse than the coverage on the negative Day(s) to Be Dropped, then the swap or X-day move will be awarded. Day(s) to Be Dropped on which coverage is zero (A equals R) is not considered with respect to

reserve coverage.

Examples

Assume a pilot is scheduled to fly rotation 4027 and wishes to swap it for rotation 4029. Assume further that the days to be dropped (13-15) do not touch an APD holiday period. The swap would be granted because the sum of the negative differences A-R (-4) for the Days to Be Dropped (13-15) is > the sum of the negative differences A-R (-5) for the Days to Be Added (17-19).

Said another way, the negative Days to Be Added are cumulatively worse off than the negative Days to Be Dropped. (The differences A-R on the 13th and 18th are not used in the calculation because they are positive, not negative, differences.)

Day	13	14	15	16	17	18	19
Rotation	4027	4027	4027		4029	4029	4029
A	8	6	3		3	9	5
R	7	7	6		6	7	7
Difference	1	-1	-3		-3	2	-2
			Total = -4				Total = -5

Now assume the following reserve coverage in the same swap scenario as above. The swap would be granted because there are no negative differences A-R for the days to be dropped (13-15). The fact that A is equal to R on a Day to Be Dropped (the 13th) does not require that there be a Day to Be Added that is worse off.

Day	13	14	15	16	17	18	19
Rotation	4027	4027	4027		4029	4029	4029
A	7	8	9		9	9	9
R	7	7	6		6	7	7
Difference	0	1	3		3	2	2

Holiday (Day-By-Day) Application

The holiday application is calculated on a day-by-day basis such that, for every Day to Be Dropped on which reserve coverage is negative (A less than R), there must be a Day to Be Added on which the reserve coverage is worse.

Examples

Assume a pilot is scheduled to fly rotation 4027 and wishes to swap it for rotation 4029. Assume further that one or more of the Days to Be Dropped (13-15) falls within an APD holiday period. The swap would be denied because on the 14th and 15th, A is less than R. While the negative difference A-R on the 19th (-2) < the negative difference A-R (-1), i.e., is worse off with respect to reserve coverage, there is no Day to Be Added (17 - 19) on which reserve coverage is worse than on the 15th (-3).

Day	13	14	15	16	17	18	19
Rotation	4027	4027	4027		4029	4029	4029
A	8	5	3		3	9	5
R	7	6	6		6	7	7
Difference	1	-1	-3		-3	2	-2

Now assume the following reserve coverage in the same swap scenario as above. The swap would be

granted because there are no negative differences A-R for the days to be dropped (13-15). The fact that A is equal to R on a Day to Be Dropped (the 14th) does not require that there be a Day to Be Added that is worse off.

Day	13	14	15	16	17	18	19
Rotation	402 7	402 7	402 7		402 9	402 9	402 9
A	8	6	9		9	9	9
R	7	6	6		6	7	7
Difference	1	0	3		3	2	2

Thanksgiving/Christmas Exception to Holiday (Day-By-Day) Application

The Thanksgiving and Christmas APD holiday periods are further restricted. If any Day to Be Dropped within these periods does not have positive coverage (A greater than R), the swap or X-day move will be denied, regardless of whether reserve coverage is even worse on a Day(s) to Be Added. Zero or negative coverage on Days to Be Dropped that fall just outside these two holiday periods are subject to the normal Holiday Application.

Examples

Assume a pilot is scheduled to fly rotation 4027 and wishes to swap it for rotation 4029. Assume further that two of the days to be dropped (23-24) fall within the Christmas Day holiday period (Dec 23-26). The swap would be denied because, on the 23rd, A is equal to or less than R. It does not matter that there are Days to Be Added (the 17th and 19th) that are worse off with respect to reserve coverage.

Day	22	23	24	17	18	19
Rotation	4027	4027	4027	4029	4029	4029
A	6	6	9	3	9	5
R	7	6	6	6	7	7
Difference	-1	0	3	-3	2	-2

Now assume the following reserve coverage in the same swap scenario as above. The swap would be granted because A is greater than R on the 23rd and 24th (Thanksgiving/Christmas exception does not apply), and because the negative difference A-R on a Day to Be Added (the 19th) is < the negative difference A-R on the 22nd, i.e., is worse off with respect to reserve coverage.

Day	22	23	24	17	18	19
Rotation	4027	4027	4027	4029	4029	4029
A	6	7	9	9	9	5
R	7	6	6	6	7	7
Difference	-1	1	3	3	2	-2

One Final Thought

Bear in mind that the system uses the Reserves Required and Available numbers as they exist at the time that your swap or X-day move request is considered. These numbers may have been changed by the preceding awards of other pilots within that PCS run and may change again after your request is considered. That is, they may be different from what you see in iCrew, both before and after that PCS run.

X-Day Move Rules (12 M. 8.)

X-days may be moved, at pilot request, via PCS under “leave requests,” provided:

- the X-day(s) to be moved are:
 - an entire X-day block,
 - the first or last day of an X-day block, or
 - a series of contiguous X days that includes the first or last day of an X-day block, and
- reserve availability in the category is sufficient, and
- movement of the X day(s) does not cause an FAR violation, and
- X-day(s) are not moved into or out of a scheduled vacation, and
- X-day(s) are not moved into or out of the last six days of the current bid period during the PBS bid award process for the subsequent bid period, and
- the X-day(s) to be moved begin at least 72 hours after the award date of the move, and
- X-day(s) are moved to be contiguous with:
 - another X-day block,
 - a training day,
 - a vacation day,
 - a PD/APD day, or
 - a day of legal duty.

Exception one: An entire X-day block may be moved to days that are not contiguous with another X-day block or a day of training, vacation, PD, APD, or legal duty.

Exception two: A portion of an X-day block that contains the first or last day of the block may be moved to days that are not contiguous with another X-day block or a day of training, vacation, PD, APD, or legal duty, provided:

- the total number of X-day blocks after the move does not exceed the max reserve off day block limit for the category as published in the bid package, and
- the move maintains a minimum separation equal to the greater of four days for domestic categories, six days for international categories, or the longest rotation in the bid package between any X-day block and any of the following:
 - another X-day block,
 - a training day,
 - a vacation day,
 - a PD/APD day, or
 - a day of legal duty, and
- the move maintains a minimum separation equal to the lesser of three days for domestic categories, four days for international categories, or the longest rotation in the bid package between any X-day block and any of the following:
 - another X-day block,
 - a training day,
 - a vacation day,
 - a PD/APD day, or
 - a day of legal duty.

Exception: If an international-category pilot’s reserve line contains a contiguous block(s) of nine or more on-call days, and they are in a category in which 20 percent or more of the published rotations in the bid package are scheduled to operate for nine or more days, they may not move an X day(s) if the move would reduce the length of any contiguous block of on-call days below the minimum separation length (MSL) published in the bid package. The MSL will be computed as the weighted average length, rounded to the nearest whole number, of all published rotations in the category that are scheduled to operate for nine or more days.

X-Day Moves and the 30/168 Requirement

FAR 117 requires a pilot to have 30 hours of rest in the 168-hour period immediately preceding an assignment to short call or to a rotation. *PBS awards are not affected by this requirement*, however certain X-day move requests are denied for this reason. The PCS system, in order to ensure

compliance with this rule, will deny an X-day move if it does not provide at least 30 consecutive hours of rest in each 168-hour period, unless that condition already exists as a result of the pilot's PBS award. In most cases, this will require two contiguous X-days in each seven calendar days.

The PCS programming uses the following logic:

- The move cannot create a 30 in 168 violation, if one didn't exist, or
- if a pilot already has seven days on call, then the X-day(s) move cannot create more than 13 days on- call (*This is because one violation already exists and allowing more than 13 contiguous days on-call would create a second violation*).

Examples

```

NAME:RESERVE, JOE          0123456 LOCKER: -          01/01/14  15:00:00
LOT: 0000 DTW 717 A 01JAN14 / 30JAN14  SECND-CAT: /
MU:
DTE OR DES OFF STAT ROT1 D R1 STAT ROT2 D R2 RPT1 RPT2 E/L R CALL BLKN DTE
01W RES 01W
02T RES 02T
03F RES 03F
04S RES XX 04S
05S RES XX 05S
06M RES 06M
07T RES 07T
08W RES 08W
09T RES 09T
10F RES XX 10F
11S RES XX 11S
12S RES XX 12S
13M RES 13M

```

This X-day move would be **denied**, as it would result in a 30/168 violation that did not previously exist. The 30-hour rest requirement would not be satisfied with the single X-day remaining on the 4th.

NAME: RESERVE, JOE 0123456 LOCKER: - 01/01/14 15:00:00
 LOT: 0000 DTW 717 A 01JAN14 / 30JAN14 SECND-CAT: /
 MU:

26S		RES																26S
27M		RES																27M
28T		RES																28T

This X-day move could be **approved**. A 30/168 violation already existed, and this move does not result in more than 13 days on call in a row.

Moving X-Day(s) Following Conversion To FRMS Short Call

Section 23 S. 5. c. Exception one of the PWA provides that a reserve pilot in a widebody category that operates FRMS rotations may be assigned short call on the first on-call day following a block of days off, so long as they are notified of this assignment no later than 1200 (pilot base time) on the last on-call day prior to the beginning of their block of days off and are released from duty at the time of notification until the start of the short call period.

Reserve pilots who are subject to potential FRMS operations are afforded the same ability to move their X-days as reserve pilots in all other categories in accordance with **Section 12 M. 8**. This includes moving X-day(s) out of the duty-free period between notification of and the start of a FRMS short call period.

Caution: Should any X-day(s) be moved out of such duty-free period, **the pilot will have effectively created a new obligation to the company** and would no longer be free from duty until the start of the FRMS short call period.

Example 1:

At 0500 on the 2nd, Crew Scheduling notifies the pilot of an FRMS short call beginning at 1200 on the 10th. The pilot is now free from duty from 0500 on the 2nd through 1159 on the 10th.

On the 1200 PCS run on the 2nd, the pilot is awarded their request to move the X-days on 6-9 to 10-13. They are now on long call from 0000 on the 6th through 2359 on the 9th and are no longer on call on the 10th.

14S		RES																14S	14S		RES															14S	

Result: Crew Scheduling must remove the FRMS short call period on the 10th.

Example 2:

At 0500 on the 2nd, Crew Scheduling notifies the pilot of an FRMS short call beginning at 1200 on the 10th. The pilot is now free from duty from 0500 on the 2nd through 1159 on the 10th.

On the 1200 PCS run on the 2nd, the pilot is awarded their request to move the X-days on 6-9 to 11-14. They are now on long call from 0000 on the 6th through 1159 on the 9th. They remain on assigned rest from 1200 on the 9th through 1159 on the 10th.

13F		RES																13F	13F		RES	XX														13F	
14S		RES																14S	14S		RES	XX														14S	

Result: The FRMS short call period and preceding rest will remain. Crew Scheduling retains the option of removing the short call assignment and preceding rest or returning the pilot to long call status over this period.

Swapping Carry-Out Rotations (Asterisk Rotation/Transition Rotation) (23 H. 5. a. Note, 23 I. 9. Note two, 23 I. 10. a. Note, & 23 I. 11. a. Note)

A pilot is allowed to drop or swap a carry-out rotation prior to the close of line bidding for the subsequent bid period if the number of reserves available in the current bid period is sufficient. It will be assumed that the number of reserves available in the subsequent bid period will be sufficient. A carry-out trip drop or swap that drops a day(s) in the subsequent bid period that fall(s) within the period commencing two days before and ending one day after one of the following holidays will not be eligible for this treatment:

- 1) New Year's Day
- 2) Super Bowl Sunday
- 3) Good Friday
- 4) Easter
- 5) Memorial Day
- 6) Independence Day
- 7) Labor Day
- 8) Thanksgiving Day
- 9) Christmas Day

For example, consider a trip that begins on June 29 and ends on July 8. Prior to the close of the PBS bid window for the July bid period, a pilot may swap this trip for another trip that ends on or after July 5, but they may not swap for a trip that ends on or before July 4. Because July 5 is in the Independence Day Authorized Personal Drop (APD) holiday period that covers July 2 through July 5, swapping with the trip that ends on July 4 would cause a day to drop within the holiday period (July 5). A pilot may swap out of a trip that touches an APD holiday period if the added trip covers the days within the APD holiday period.

Additional On-Call Days (AOCDs) and Premium On-Call Days (POCDs) (23 T. 9. & 23 U. 9.)

Crew Scheduling may post available on-call days (AOCD) in Reserve Open Time to give reserve pilots the opportunity to bid for these. Each AOCD awarded increases the pilot's reserve guarantee by a reserve pro rata share (1/16, 1/17, or 1/18 of the reserve guarantee). Crew Scheduling also has the option of designating certain AOCDs as premium on-call days (POCD). The addition of a POCD to a reserve pilot's line will have no effect on their reserve guarantee. Instead, the pilot will receive the greater of 7:00 pay, no credit, or single pay, no credit for the value of the duty period(s) flown on the POCD.

Awarding AOCDs and POCDs

A pilot may view AOCDs and POCDs, in iCrew by navigating to Reserve Open Time, and may request AOCDs and/or POCDs via their YS. The Yellow Slip For Additional On-call Days template will allow the pilot to specify a request for AOCDs, POCDs, or both. Each priority in the template allows the pilot to enter up to two dates on which they desire to be awarded AOCDs or POCDs. If two dates are entered on the same line, both dates must have an available AOCD or POCD for which the pilot is eligible. A pilot who is willing to be awarded either one of two dates or both, should enter both dates in Preference One and each of the dates individually in Preferences Two and Three. Crew Scheduling will attempt to honor as many priorities as possible, given the reserve pilot's schedule.

AOCDs and POCDs may be awarded at the discretion of Crew Scheduling as they become available throughout the bid period. As with any YS award, Crew Scheduling will attempt to notify the pilot of the award. A pilot who cannot be contacted will be bypassed.

An AOCD or POCD must be attached to an existing block of on-call days and may be awarded over an X-day, a golden X-day, TOFF, or PB. It may not be awarded over an APD, IVD, PR, or any other type of absence. It will not be awarded if it causes the pilot's on-call day block to exceed six or 13 consecutive days, which could generate the need for the pilot to be scheduled for rest within the block. However, a pilot whose on-call block is already seven or more days in length may add on-call days to that block so long as the block does not exceed 13 days.

The X-day, golden X-day, TOFF, or PB over which a pilot is awarded an AOCD or POCD will be forfeit. A reserve pilot who has been marked as FULL will not be awarded an AOCD or POCD.

Pay for POCDs

For a pilot to be eligible for premium pay on a POCD (the greater of 7:00 or value of applicable duty period(s) pay, no credit), the block of on-call days to which the POCD is attached at the time of award must remain intact. That is, the pilot must remain available for the entire on-call block in order to receive premium pay for an awarded POCD.

If the pilot moves an X-day anywhere into the block or otherwise drops one or more of the on-call days in the block, e.g., PD, sick leave, etc., the POCD will revert to an ordinary on-call day. Rather than generating pay, no credit above the guarantee, it will generate an increase to the pilot's reserve guarantee of a reserve pro rata share.

Jetway Trades (Pilot to Pilot Partial Trip Swaps)

- The Basics of JWTs 84
- Effect on Pay after JWT 85
- Effect on Pay after Delay 90
- Effect on Pay after Reroute 93
- Section 23 K. Recovery Obligation after JWT 95
- Offering a JWT 97
- Viewing and Accepting an Offered JWT..... 97
- JWT Pay Summary 97

Jetway Trades (JWT) allow a regular pilot to offer a part of their rotation, either from the beginning or from the end, for another regular pilot in their category to pick up. Contrary to what the term jetway “trade” might suggest, two pilots may not exchange portions of their respective rotations with each other. JWTs are one-way swaps only.

A JWT allows a pilot who needs the afternoon off, for example, to give away a round-trip turn at the end of their rotation or allow a commuting pilot whose rotation ends in a turn to their home airport and back to give away the return flight to a fellow commuter from that airport.

The Basics of JWTs

- Only consecutive segments encompassing beginning or end of the offering pilot’s rotation can be transacted
- MiCrew is used to conduct transactions (not available in iCrew)
- International Segments - JWTs can begin at any domestic station, but can NOT begin at an international station (e.g. a pilot with an ATL-AMS-BOS-AMS-ATL rotation may offer the BOS-AMS-ATL portion of the rotation, but not the AMS-ATL portion)
- FRMS and Charters - a pilot whose rotation operates under an FRMS or contains a charter may not offer any portion of their rotation as a JWT
- The JWT may not involve a PBSR, SS, GS, IA, GSWC, IAWC, or recovery flying assigned under *Section 23 K*.
- Transaction timing - once a pilot has accepted a JWT in MiCrew, Crew Scheduling will manually execute the swap as soon as practical but no later than the next PCS run, so long as the JWT was accepted at least an hour prior to that PCS run
- Hotel - if the JWT involves, or is adjacent to, a layover on the offering pilot’s rotation, the offering pilot will have the option of giving away the hotel along with the offered flights
- Normal requirements for a Pilot-to-Pilot Swap Board transaction apply
 - Buffers - the addition of the JWT segments may not come within one hour of creating an FAR or PWA conflict (this one-hour buffer does not apply to the pilot’s PWA block hour limit)
 - A receiving pilot may add JWT segments to their existing rotation, as long as the resulting rotation complies with the FDP, flight time, break in duty, and WOCL scheduling limits of *Sections 12 D. - G. and P.*
 - If added flying from a JWT requires SAQ/route/theater qual, that flying must report more than 96 hours after the flying is accepted by the receiving pilot, unless pilot has the required qualification or the flying has already been awarded/assigned to another pilot whose presence either qualifies or will qualify the pilot into the special airport or theater or on the route,
 - The added rotation may not pair pilots who are both projected to be low-time pilots at the report of the added flying
 - Both pilots have completed OE
 - The JWT may not drop flying within 96 hours of report on which a line check or SAQ is scheduled
 - During the PBS bid award process, a pilot may not execute a JWT involving flying that is within the last six days of the current bid period

NOTE ONE: Due to the nature of JWT and the creation of flying reporting outside of a crew base, not being in position to report as scheduled for a JWT will have the following consequences:

First Occurrence: Suspension of JWT privileges for six months

Second Occurrence: Permanent suspension of JWT privileges

This scenario would only apply if a pilot failed to report for flying without notifying the

Company. Sick calls, car trouble, family emergencies, and any other legitimate scenarios of which the pilot has notified the Company would not apply and would not generate removal from the program.

Effect on Pay after JWT

EXAMPLE ONE - Sit, EDP, and Holiday Pay

Another pilot accepts this JWT on their days off. Their new rotation (shown on the right) has a guaranteed value of 9:08, the flight time of the legs to be flown. The receiving pilot will receive no Sit Pay, EDP Pay, or trip period credit, but will receive the full 29:50 per diem generated by their new rotation. The Holiday Pay due on December 24 remains with the offering pilot, because they gave away only a portion of that duty period. Had the JWT involved the entire duty period on December 24, the receiving pilot would have received 5:15 Holiday Pay for that day.

The remainder of the offering pilot's rotation (shown on the left) now has a guarantee of the original value of their rotation minus the 9:08 of flying they gave to the receiving pilot, or 6:49 (plus Sit, EDP, and Holiday Pay) and now generates 24:35 of per diem. The Holiday Pay due on December 24 remains with the offering pilot, because they gave away only a portion of that duty period. Had this pilot given away the entire duty period on the 24th, their Holiday Pay would have been reduced to 5:15.

Now suppose a pilot has the rotation shown on the right. It has a guarantee of 10:30 and generates 5:15 Holiday Pay because it operates on December 24.

The pilot looks for JWTs that operate on December 23 and sees the two flight segments below as being available for pick up.

23	2272	LAX 1100	SFO 1236	1.36	0.55	320
		SFO 1331	LAX 1502	1.31		

Adding these two flight segments to their existing rotation, causes their rotation to appear as shown on the left. Note that the guaranteed value of the rotation has increased by 3:07, the value of the flying added. However, the 2:18 sit that resulted from the JWT does not generate Sit Pay, nor does the 10:58 duty period result in any EDP Pay. That said, if flight 1287 were to be delayed, the additional duty time would generate EDP Pay.

EXAMPLE THREE - ADG Carveout Pay

A pilot has the rotation shown on the right and offers the last duty period, but not the hotel room in AUS. Note that the last duty period of this rotation is scheduled to release at 0005, thereby generating 2:00 ADG Carveout Pay. It also generates 2:30 MCD Pay, 5:15 Holiday Pay, :13 Sit Pay, and 3:18 EDP Pay.

The remainder of the offering pilot's rotation (shown on the left) now has a guarantee of the original value of their rotation minus the 3:18 of flying they gave to the receiving pilot, or 16:02. It retains the 5:15 Holiday Pay because the offering pilot is still flying on Christmas Eve, the 2:00 ADG Carveout because the pilot is still releasing from the rotation between 0000 and 0159, and the :13 Sit Pay and 3:18 EDP Pay because those always remain with the offering pilot.

Effect on Pay after Delay

Any additional soft pay resulting from a flight delay will be paid to the affected pilot.

EXAMPLE ONE

Suppose the receiving pilot picked up the flying shown on the right. Recall that, although the length of A Day is 10:58, the pilot does not receive the associated EDP Pay; it remained with the offering pilot. However, if flight 1287 is delayed such that A Day is extended beyond its original 10:58, the pilot will receive the EDP Pay due for the additional time spent on duty beyond 10:58.

Suppose the receiving pilot's new rotation is as shown on the left. Because it is scheduled to release prior to the end of the day, it generates no ADG Carveout Pay.

- If flight 707 is delayed such that the rotation releases 0000-0159 on the following day, the pilot will receive 2:00 ADG Carveout Pay in addition to the 10:05 guarantee of the rotation
- If the rotation is delayed to release at or after 0200, the pilot will receive 5:15 ADG in addition to the 10:05 guarantee of the rotation
- In either case, because the following day is Christmas Eve, the pilot will receive an additional 5:15 Holiday Pay

EXAMPLE THREE

Suppose the receiving pilot's new rotation, as shown on the right, was picked up from the beginning of the offering pilot's rotation.

Now suppose the receiving pilot's new rotation, as shown on the left, was picked up from the end of the offering pilot's rotation.

- The receiving pilot will receive 2:00 ADG Carveout Pay in addition to the 10:15 guarantee of the rotation
- Because that following day is Christmas Eve, the pilot will also receive 5:15 Holiday Pay
- If this rotation is delayed such that it releases after 0159, the pilot will receive 5:15 ADG in lieu of the 2:00 ADG Carveout Pay, and in addition to the 10:15 guarantee of the rotation

Effect on Pay after Reroute

If either pilot involved in a JWT is rerouted, the soft pay items of *Section 12 L.* will be applied in full to any duty periods affected by the reroute.

EXAMPLE ONE - Offering Pilot Is Rerouted

Consider the remainder of the offering pilot's rotation after they originally gave away the first four legs, shown on the right, and recall that it has a guarantee of only 6:49 (plus Holiday, Sit, and EDP Pay) due to the JWT.

If the offering pilot were now to be rerouted as shown on the left, all *Section 12 L.* soft pay items would again apply to the affected duty period. This would cause the new rotation to pay 2:54 for the first duty period plus 5:09 or 5:15 ADG, whichever is greater, for the second duty period for a total of 8:09. Because this would be more than the pilot's rotation guarantee of 6:49, pay and credit for the rotation would be for that greater amount. The pilot would retain the 10:30 Holiday Pay and the :22 Sit and :58 EDP Pay, as they were from the first duty period of their original rotation and would be due reroute pay under *Section 23 L. 4.*

If the offering pilot were instead to be rerouted into an additional calendar day as shown on the right, they would receive 5:15 ADG for each of the affected duty periods (Dec 25 and 26). As that is greater than the value of those two days, the 10:30 would be added to the value of A Day (2:54) for a total of 13:24. The pilot would retain the 10:30 Holiday Pay and the :22 Sit and :58 EDP Pay, as they were from the first duty period of their original rotation and would be due reroute pay under *Section 23 L. 4. and 8.* (the latter depending upon the reason for the late release).

Now consider the receiving pilot's new rotation after they originally received the four legs from the offering pilot, as shown on the left. Recall that this rotation carries no soft pay and has a guarantee of 9:08, the value of the flight time. The Holiday Pay due on December 24 remains with the offering pilot, because they gave away only a portion of that duty period.

If the receiving pilot were now to be rerouted as shown on the right, all *Section 12 L.* soft pay items would apply to the first duty period, including ADG. Because the first duty period is already worth more than 5:15, pay for the rotation does not change. However, the pilot would be due reroute pay under *Section 23 L. 4.*

If the reroute were to affect both duty periods of the receiving pilot's rotation as shown on the left, both duty periods would be subject to the soft pay provisions of *Section 12 L.* In this case, the increased flight pay would bring its pay and credit up to 11:29, plus Holiday Pay of 5:15 pay, no credit. In addition, the pilot would receive reroute pay under *Section 23 L. 4.* They are NOT due reroute pay under *Section 23 L. 8.* because the reroute is not scheduled to release more than four hours after their previously scheduled release (1620 in MSP, which equates to 1420 in LAX).

Note that, because the pilot is being rerouted on the last leg of their

rotation, they are being returned to their base and not to the airport at which they were scheduling to release prior to the reroute.

Section 23 K. Recovery Obligation after JWT

If a pilot who has participated in a JWT is removed from that rotation due to an IROP affecting the rotation, that pilot is subject to recovery flying under *Section 23 K.* for any flying from which they were removed *other than flying that was added as part of the JWT.* If the only flying from which the pilot is removed was added via the JWT, the pilot may only be deadheaded to rejoin their original rotation. Otherwise, recovery assigned to the pilot must comply with the provisions of that section. In all cases, the pilot will retain rotation guarantee of the full value of their rotation prior to the removal.

The recovery assignment must be scheduled to report no earlier than the pilot's original report. If the pilot has added flying to, or dropped flying from, the beginning of their rotation via a JWT such that it reports in other than the pilot's base, the Company will deadhead the pilot to their base as needed to perform any assigned recovery flying or the remainder of their rotation. Such deadhead will be scheduled to depart no earlier than the pilot was scheduled to depart prior to the removal.

Any recovery assignment must be scheduled to release in the pilot's base no later than four hours after the pilot's original release (or the end of that calendar day, whichever is later, if the last duty period of the recovery flying is a transoceanic duty period). The entire recovery rotation will be subject to the soft pay provisions of *Section 12 L*.

If the pilot has added flying to the end of their rotation via a JWT and that added flying is subsequently cancelled, the pilot's rotation simply ends in their base. If the pilot's rotation had a turn from their base to an out location and back, the pilot gave away the return leg as a JWT, and the departure out of their base subsequently cancels, the rotation will also then simply end in the pilot's base. In each case, the pilot will retain rotation guarantee of the full value of their rotation prior to the removal, and no deadhead will be added to return the pilot to the location the rotation was to terminate after the JWT.

EXAMPLE ONE

Assume a pilot has accepted a JWT for the one-leg rotation shown on the right. If the pilot is removed from this rotation due to an IROP affecting that rotation, they will have no recovery obligation because the rotation consists solely of flying that was added as part of the JWT.

Now assume the pilot added that single flight 2272 SFO - LAX to their existing rotation, as shown on the left. (The pilot's original rotation is shown in blue and the flight that was added in the JWT is orange.)

Note that due to ADG, the pilot's original rotation had a value of 15:45 plus Holiday Pay of 10:30 pay, no credit. To this is now added 1:31 for the additional flight 2272. However, the pilot does NOT receive Sit Pay for the 2:18 turn time created on A Day by the JWT.

If flight 2272 (the leg the pilot added via the JWT) cancels, the pilot will be deadheaded to rejoin their rotation at the earliest possible time, but no earlier than 1331 (the scheduled departure time of flight 2272). If other flights on the pilot's rotation cancel, i.e.,

flights from the pilot's original rotation, normal *Section 23 K*. recovery rules will apply. In all cases, the pilot will be pay protected for all cancelled flying. If no recovery flying is assigned at the time of the pilot's removal from the rotation, Crew Scheduling must assign any recovery flying no later than six hours after the pilot's original report, in this case 1831 pilot base time. During that period, the pilot will be required to remain promptly available for contact by Crew Scheduling in the general area of the airport at which they were scheduled to report prior to their removal, in this case SFO.

Offering a JWT

Offering a portion of your rotation to another pilot in your category as a JWT is similar to posting that rotation in full on the Pilot to Pilot Swap Board. First, open your calendar in MiCrew and select the rotation. Now swipe right for the Post Trip option. When you select the new option for Jetway Trade, a new screen will appear that will allow you to select the legs and layover hotels you wish to give away. Remember that you can only select consecutive legs from either the beginning or the end of your rotation, and you cannot select the entire rotation. (To give away the entire rotation, simply post that as a pickup as always.)

Once you have selected the legs and hotel nights you wish to give away and have clicked on Next, a review screen will appear allowing you to confirm your selections. Selecting Post Trip will cause your proposed JWT to appear on your list of active postings on the Swap Board.

As with any Swap Board post, your offered JWT will removed from the Swap Board two hours prior to report of the flying being offered. At that point, you can call Crew Scheduling to request manual processing of the JWT, which will be processed if practicable.

Viewing and Accepting an Offered JWT

To view offered JWTs, open the Swap Board menu in MiCrew and select the JETWAY TRADE tab. You can review offered JWTs and accept a JWT in the same manner that you would view and accept offered rotations on the Swap Board, with one exception. When you accept a JWT, that flying is not automatically added to your schedule. Crew Scheduling must manually add this flying and must do so prior to the next upcoming PCS run, so long as you have accepted the JWT at least one hour prior to that PCS run.

Remember that you can accept a JWT on days off or you can accept a JWT that will add one or more legs to your existing rotation. In either case, a JWT has the same one-hour buffer on FAR and PWA limits as any other Swap Board transaction. And as with the Swap Board, a JWT may only be transacted between pilots in the same category.

JWT Pay Summary

The following table summarizes the various pay aspects of a JWT and specifies which each pilot receives.

Type of Pay	Offering Pilot	Receiving Pilot
Flight Pay	As flown	As flown
Per Diem	As flown	As flown
ADG Carveout Pay		Only if picking up end of rotation that releases 0000-0159
Holiday Pay	If giving only part of duty period on eligible holiday	Only if picking up entire duty period on eligible holiday
All Other Soft Pay	Yes	No
Reroute	Normal rigs apply to rerouted duty period(s)	Normal rigs apply to rerouted duty period(s)
Recovery Flying	Normal rigs apply to entire rotation	Normal rigs apply to rerouted duty period(s)

General (23 S.)

A reserve pilot is, by default, on call 24 hours a day unless on an X-day, a designated rest period, a duty-free period prior to report or prior to the start of short call, or some other non-flying status.

A reserve pilot may receive an assignment up to two days prior to report time. If a reserve pilot is assigned a rotation with more than 24 hours to report, their assignment remains subject to change until 24 hours prior to report, at which point they will automatically be released from further long call obligation. If notification occurs inside of 24 hours, but greater than 18 hours, then the pilot is immediately and automatically released from further long call obligation.

All this means that a long call pilot could be assigned a rotation reporting in as many as 48 hours or more. Such a pilot will remain on any assigned rotation and/or short call until no less than 18 hours prior to report for the rotation that they have been assigned, then automatically released from any Company obligation, regardless of if it is an X-day or a reserve on-call day.

For example, a pilot has been converted to short call ending at 1800. Subsequently, the pilot is assigned a rotation reporting at 0600 on the day after the short call. In making such an assignment, Crew Scheduling must release the pilot from their short call period no later than 1200 pilot base time - 18 hours prior to the rotation's scheduled report. Conversely, were the rotation assigned first, the pilot could be converted to short call the day prior to the report of the rotation, but such short call would be required to end no later than 1200 pilot base time - 18 hours prior to the rotation's scheduled report.

Conversely, if late operations on a reserve pilot's current rotation cause their next assigned report time or short call start time to be less than 18 hours from their current release, then the pilot will be removed from their next assignment and returned to on-call status upon release. (The pilot may need to call Crew Scheduling to effect such a release.)

A reserve pilot who is assigned a rotation or short call period that reports between ten and 18 hours from the start of their first on-call day will not be required to schedule their commute to include a backup flight, regardless of any commuting policy then in place.

A reserve pilot who completes a rotation with a duty period that interrupts their WOCL will be moved to the bottom of the coverage list for their days-of-availability grouping for the remainder of that calendar day. They will only be called out to fly again that evening if there is no other reserve pilot available with the same days of availability.

A reserve pilot who calls in well on an on-call day prior to 0600 will not be charged a sick day and will immediately be placed on long call status. If a reserve pilot calls in well at or after 0600, they will be charged for a sick day and be placed on long call status at 0000 the following day. The logic is that a reserve pilot who calls in well prior to 0600 can be given an assignment on that day since a long call pilot has an 18-hour leash.

Long Call (23 S. 5.)

A long-call pilot has an “18-hour leash,” as follows. Crew Scheduling will attempt to notify a long-call pilot of a rotation, short-call period, or rest period, and place the assignment on their schedule in iCrew. A long-call pilot has no obligation to check their schedule while on call. A long call pilot can be made to:

- Report no earlier than 18 hours from the first attempted contact by Crew Scheduling.
- Report for a rotation/short call no earlier than ten hours after the end of their last non-fly day, if the rotation/short call was assigned no later than 12 hours prior to the end of the non-fly day. If so assigned, then the Company has no obligation to contact the pilot, and it is the pilot’s responsibility to ascertain any such assignment. If nothing appears on a reserve pilot’s schedule at that 12-hour point, the earliest report to which they can be assigned will be 18 hours after the start of their on-call day, and the Company is required to notify the pilot of the award/assignment via telephone.
- Report no earlier than 18 hours after the end of a vacation day.
- Convert to short call no earlier than 18 hours from the first attempted contact by Crew Scheduling and will be released from duty during the 18 hours immediately preceding the start of their short call period.

Long call pilots are:

- Notified of assignments by:
 - telephone contact from Crew Scheduling.
 - Normally, this telephone contact is made manually by a Crew Scheduler.
 - For an assignment to short call, the telephone contact may be made by the Crew Notification (CNO) system.
 - If Crew Scheduling chooses to use CNO to notify a pilot of their conversion to short call, they must have CNO make the notification via a telephone call and, if unanswered, leave a voicemail.
 - Use of a CNO text message or other electronic means of communication are not considered attempted contact.
 - electronic placement of a rotation or conversion to short call that is placed on their schedule prior to:
 - their release from a rotation, or
 - 12 hours before the end of their last non-fly day (other than a vacation day) before an on-call day.
- Not required to be contactable in the 24 hours prior to the report of an assigned rotation.
- Are not required to acknowledge any assignments.
- Must inform Crew Scheduling no later than three hours prior to the scheduled report of a rotation or short call assignment if not fit for duty.
- If assigned a rest period:
 - On the pre-release schedule check - the rest may begin upon release.
 - Via direct telephone contact may be placed on rest immediately.
 - If not contacted directly by Crew Scheduling, the rest period will begin no earlier than two hours following the first attempted contact. In such case, the pilot must inform the Company within nine hours of first attempted contact if they were unable to begin their rest as scheduled.

Note: If you block-in earlier than scheduled and you’re going into an X-day, you should verify your rest begins at release and extends to the start of your X-day. Occasionally, if you block-in early, the rest will end a few minutes prior to the X-day start, leaving you on LC status interrupting your continuous rest. This can impact your ability to be awarded a YS on X-days or premium pay rotations.

Short Call (23 S. 9.)

A reserve pilot other than a ULC reserve pilot may be assigned a maximum of six short call periods in a bid period. The maximum number of short call periods will be prorated for vacation, training, or absences (other than PD/APD days) that are known prior to the beginning of the bid period, according to the tables in PWA **Section 23 S. 2. c. 2).**

A pilot who completes a short call assignment without being assigned to a rotation will receive one hour pay, no credit (above the reserve guarantee). This will be notated as SCC (short call credit) on a pilot's schedule and time card. Each of a pilot's first six (or as prorated under **Section 23 S. 2. c. 2)** short call periods are eligible for this pay.

A reserve pilot other than a ULC reserve pilot may be converted to an additional short call period(s), more times than shown in **Section 23 S. 2. c.**, if they are needed for short call and have submitted a Yellow Slip for the additional short call period(s). A short call period performed (**i.e., begun and either completed, assigned a rotation, or released by Crew Scheduling**) over six (or as prorated) will increase the pilot's reserve guarantee by one hour and generate two hours pay, no credit (above the reserve guarantee), regardless of whether the pilot performs any flying during that short call period.

Short-call periods are limited by the PWA to a maximum duration of 12 hours, although a pilot will often be scheduled for less than 12 hour short call periods.

A one-day pilot who is going into a hard non-fly day, e.g., golden X-day, vacation day, etc., will be moved to the bottom of the list for conversion to short call.

A pilot on short call is required to be within the general area of their base and promptly available for contact by Crew Scheduling and must be able to promptly report for an awarded/assigned rotation. Since each base has its own particular traffic problems, the phrase "promptly report" has never been defined in terms of time or distance and is based upon normal circumstances that can be expected throughout the day or night. Actual realistic response time may vary from base to base and with weather and time of day. It is not possible for a pilot to anticipate and account for abnormal conditions beyond their control, which may extend response time beyond that normally required. For example, a NYC pilot encountering a snowstorm or an LAX pilot caught in rush-hour traffic might each require more time than normal to sign in.

Occasionally SC flying assignments may report very shortly after the SC begins. As long as the scheduled report is within the SC period it is a legal assignment. A SC pilot must be "promptly available," which is an undefined term. If Crew Scheduling places a rotation on your schedule with limited time to report/pushback, you should provide your best guess as to your arrival time **under normal driving conditions**. With extremely short report/push back situations, the Company has made a business decision and understands you may not be able to report by the Company's posted time. You are not expected to drive excessively fast, for example, simply to make the Company's posted departure. Communication with Crew Scheduling is critical in situations such as these. Once you are in the cockpit, slow down and take your time.

Note: For NYC-based pilots, short-call availability may be measured from the pilot's closest co-terminal (EWR, LGA, JFK), without regard to the actual co-terminal to which they may be required to report. An NYC reserve pilot on short call who is assigned a rotation reporting in EWR will be reimbursed for up to \$100 of actual transportation expenses to EWR. For LAX-based pilots, short-call availability is measured from LAX.

If a pilot anticipates an unusual response time, they should inform Crew Scheduling for their planning purposes. Any discussion of "reasonable" should occur only between the pilot, the chief pilot, and possibly an ALPA representative.

A pilot who is converted to short call will not be required to be available for contact during the first

two hours of their short call period **provided they inform Crew Scheduling** at the time of notification from Scheduling. *The pilot must then be able to report for a rotation as early as two hours after the start of their short call period.* During their period of unavailability, the pilot assumes responsibility for acknowledging any rotation placed on their line.

At any point prior to the end of the two-hour period, the pilot may inform Crew Scheduling that they are now available for contact or check their schedule and, if no assignment has been made, will then be required to be “promptly available” as described above.

Immediately upon completing a short call period, a reserve pilot reverts to long-call status. There is no automatic or routinely required rest following a short call period.

Awarding and Assigning of Short Call Periods (23 S. 1. f.)

Available short call periods for the following bid period’s initial line awards are published in the monthly bid packages. Short calls are available to bid pre-month beginning with the bid window opening at 1800E on the 4th and close at 0800E on the 11th, using the existing Yellow Slip template in iCrew. These short call awards will be made available for viewing in iCrew no later than 1800E on the 19th. Any outstanding requests will then be deleted, giving the pilot a clean template into which to enter their regular Yellow Slip requests for short call periods once schedules for the following bid period have been released.

Available short call periods are then normally published in Reserve Open Time by 0800E the day prior to the start of each short call period (they may be published as far in advance as Crew Scheduling desires). Short call periods for the following day may only be added after 0800E for unanticipated operational requirements (e.g., sick calls, late developing weather, unanticipated operational events).

Short call periods appearing in Reserve Open Time indicate the date and start time of each short call period, along with the days of availability grouping into which an eligible reserve pilot must fall. For example, if an available short call period is marked as “three-day pilot,” only a pilot with three days of availability is eligible to be awarded that short call period. A pilot will not be awarded or assigned a short call period that interrupts an X-day.

Short call periods are awarded in a daily automated short call runs between 1100E and 1200E for the next day and beyond under **Section 23 S. 1. f. 1)**. Short call awards in the automated system will be in seniority order among pilots with the applicable days of availability, regardless of the number of short call periods for which the pilot is already scheduled in the bid period, up to the number of short call periods for which the pilot is obligated in the bid period (normally six).

Any next-day short call periods left unawarded after the daily automated short call run will be awarded or assigned manually by Crew Scheduling under **Section S. 1. f. 2) - 6)**, in accordance with remaining reserve pilots’ relative seniority and number of short call credits. Crew Scheduling may NOT manually award or assign short call periods beyond the following day, with the exception for a widebody category with FRMS rotations and a pilot going into a non-fly day(s) in accordance with **Section 23 S. 5. c.**

A reserve pilot may be awarded consecutive short call periods so long as they are available for the correct number of on call days. For example, suppose the Company has published the following short call periods:

- 0800 on the 4th (four-or-more days of availability)
- 0800 on the 5th (four-or-more days of availability)
- 0800 on the 6th (three days of availability)
- 0800 on the 7th (two days of availability)

So long as they are the most senior eligible pilot that has submitted a YS for each short call period, a reserve pilot who is scheduled to be on call from the 4th through the 8th may be awarded all four of these short call periods by the automated process. However, should this pilot be assigned a four-day rotation during their short call period on the 4th, the remaining short call periods will be

removed from their schedule, and they will only receive a short call credit for the short call period on the 4th.

A pilot who has met their short call obligation for the bid period under **Section 23 S. 2. c. 2)**, i.e., has actually served all of the short call periods to which they are obligated, may be awarded additional short call periods, again in seniority order among reserve pilots in the applicable days-of-availability grouping who have met their short call obligation, regardless of their number of short call credits each pilot has above their obligation. Each additional short call period performed (i.e., begun and either completed, assigned a rotation, or released by Crew Scheduling) beyond the obligated number will cause their reserve guarantee to be increased by one hour and will generate an additional two hours pay, no credit on top of the pilot's reserve guarantee, regardless of whether they are assigned flying during their short call period. Please refer to PWA **Sections 4 C. 1. Exception four** and **23 S. 3. b.**

Once a pilot has been awarded a short call period via their YS, either in the automated system or manually by Crew Scheduling, they will not be removed from that short call without mutual consent, other than due to conflict with an awarded or assigned rotation. In such a case, the pilot will not receive credit for the short call period removed. An awarded short call period may be truncated to begin later or end earlier than scheduled, but it must remain within the same footprint as when it was awarded.

Short Call Groups for Award and Assignment

For a complete guide to entering reserve preferences in PCS, please see the iCrew User's Guide in the ALPA folder on your EFB.

A pilot may submit preferences for short-call periods as desired throughout the bid period. Such pilots will be grouped by days of availability. Within each "days of availability" grouping, pilots will be further divided into groups by the number of short call periods credited in the bid period, but only for purposes of next-day manual short call awards and assignments under **Section S. 1. f. 2) - 6).**

Note that a short call period that has been assigned but has not yet begun will be considered credited for the purposes of awarding further short call periods. Also note that a pilot who calls in sick partway through a short call period will not receive credit for that short call period.

Please note that RAW value grouping and short call group are not the same. RAW value is not considered when assigning short call periods. When awarding/assigning short call periods manually

for the following day, Crew Scheduling will follow the steps in *Section 23 S. 1. f. 2) - 6).*, as follows:

- 2) In seniority order, among pilots who have submitted a yellow slip for conversion to short call and who have less than three short call credits
- 3) In inverse seniority order, among pilots who have not submitted a yellow slip for conversion to short call and who have less than two short call credits
- 4) In seniority order, among pilots who have submitted a yellow slip for conversion to short call and who have at least three short call credits but fewer than the maximum number under *Section 23 S. 2. c. 2)*
- 5) In inverse seniority order, among pilots 1 who have not submitted a yellow slip for conversion to short call and who have at least two short call credits but fewer than the maximum number under *Section 23 S. 2. c. 2)*
- 6) In seniority order, among pilots who have submitted a yellow slip for conversion to short call and who have at least the maximum number of short call credits under *Section 23 S. 2. c. 2)*

A pilot will only be considered first in sequence for the short call period(s) that match the stipulations of their yellow slip. They will be considered in inverse seniority order for all other short call periods.

A pilot who has already performed (**i.e., begun and either completed, assigned a rotation, or released by Crew Scheduling**) the maximum permitted number of short call periods will be considered for conversion to additional short-call periods only if they have submitted a yellow slip to be first in sequence for short call. Each additional short call period performed beyond the obligated number will cause their reserve guarantee to be increased by one hour and will generate an additional two hours pay, no credit on top of the pilot's reserve guarantee, regardless of whether they are assigned flying during their short call period. Please refer to PWA *Sections 4 C. 1. Exception four* and *23 S. 3. b.*

Bidding for Additional Short Calls

PWA *Sections 23 S 2. c. 2. a)* and *b)* of the contract specify the maximum number of times a pilot may be converted to short call in relation to the number of reserve days on their schedule in a given month. A pilot may volunteer to be awarded short call periods in excess of the maximum number specified in those tables. Each additional short call period performed (**i.e., begun and either completed, assigned a rotation, or released by Crew Scheduling**) will increase the pilot's reserve guarantee by one hour, and will generate two hours pay, no credit above the reserve guarantee, regardless of whether they are assigned flying during their short call period. Please refer to PWA *Sections 4 C. 1. Exception four* and *23 S. 3. b.*

EXAMPLES

In each of the following scenarios, assume:

- Reserve guarantee of 75:00
- Pilot is awarded one SC above their max
- Pilot earns no additional pay, e.g., Sit Pay, etc.

Scenario #1 - pilot accumulates 50:00 pay and credit throughout the bid period, i.e., does not break their now 76-hour guarantee. The pilot will receive 76:00 pay and credit, plus 2:00 pay, no credit for a total pay of 78:00.

Scenario #2 pilot accumulates 80:00 pay and credit throughout the bid period, i.e., breaks their now 76-hour guarantee. The pilot will receive 80:00 pay and credit, plus 2:00 pay, no credit for a total pay of 82:00.

The additional short-call periods will be awarded in the order prescribed in *Section 23 S. 1. f.*, to pilots who have submitted a yellow slip requesting to be first in sequence for conversion to short call. A pilot will not be converted to a short-call period in excess of the number specified in *Sections 23 S. 2. c. 2) a)* and *b)* unless the short-call period matches the stipulations of their yellow-slip request to be first in

sequence for short call, and a pilot may again indicate a desire for their yellow slip request to expire after a desired number of short call periods have been credited.

Preferences If Needed for Short Call

When a pilot selects *Enter Preferences to be Used Only If Needed for Short Call*, they will see a screen similar to the *First in Sequence* screen. These preferences will be used during the manual next-day short call award/assignment process only if Crew Scheduling has determined that the pilot will be needed for short call. These preferences will not increase a pilot's chances of being "needed" for or assigned a short-call period.

During the manual process, if there are not enough pilots within a given short-call group who have submitted preferences to be first in sequence for short call, Crew Scheduling will determine the pilots needed for short call using inverse seniority order. Pilot preferences will then be considered in seniority order among those pilots.

Multiple Short Call Periods in Succession

In order for a pilot to be awarded multiple short-call periods in succession, each short-call period must be preceded by the FAR-required 10-hour rest prior to the start of short call. The Company may, at its discretion, truncate a short-call period in order to accommodate a subsequent short-call period.

FDP limit for a short call assignment (RAP + FDP):

Scheduled FDP must end no later than the earlier of:

- Unaugmented Crew:
 - FDP report time plus FDP limit from FAR Part 117 table B
 - RAP start time plus: FAR part 117 table B value plus four hours, not to exceed 16 hours (may not be extended beyond 16 hours)
- Augmented Crew:
 - FDP report time plus FDP limit for FAR Part 117 table C
 - RAP start time plus: FAR part 117 table C value plus four hours, including FDP extensions

EX

- SC began at 1200, rotation reported at 1828
- Max scheduled FDP is 14:00 (referencing FAR Table C)
- Max FDP (14:00) plus 4:00 = 18:00
- RAP = 6:28 (SC start time of 12:00 until report of 18:28)
- The FDP limit for this pilot is 11:32 (18:00 minus 6:28) due to time spent on SC, extendable to 13:32.

Short Call Assignment to an FRMS Segment

Assigning an FRMS segment to a pilot who is on short call is subject to the following conditions:

- This pilot must have 24 hours of prospective rest immediately preceding the short call start time. This prevents a pilot from being assigned an FRMS FDP while on short-call unless they are first assigned a 24-hour rest period that ends at their short call start time (time spent on long-call is not rest).
- The pilot must be able to complete the assigned FDP within the limits of the FRMS duty day plus a maximum of four hours, including the RAP (time between the short call start time and the report time of the rotation). This limit may NOT be extended.
- A pilot in a widebody category that operates FRMS rotations may be assigned short call on the first on-call day following a block of days off. They must be notified of this conversion to short call no later than 1200 (pilot base time) on the last on-call day prior to the beginning of their block of days off. They will be released at the time of notification and will be free from duty until the start of the short call period.

Ultra Long-Call (LOA 20-03)

At its discretion, the Company may offer Ultra Long-Call (ULC) Reserve Lines in categories with excess staffing. Available ULC reserve lines will be awarded in seniority order in category. The Company will award all available ULC reserve lines, provided there are sufficient bidders. A pilot may not be involuntarily assigned to a ULC reserve line.

The line guarantee of a pilot awarded a ULC reserve line will be 80% of the published reserve guarantee for that pilot's category. A pilot awarded a ULC reserve line will not be assigned to a rotation that will cause their credit to exceed, or further exceed the pilot's ULC reserve guarantee plus 15:00.

Example: In a category with an ALV of 77:00 and a normal reserve guarantee of 75:00, the reserve guarantee for a pilot awarded a ULC reserve line is 80% of 75:00, or 60:00.

A pilot awarded a ULC reserve line will be assigned 15 on call days in a full month of reserve and will receive a prorated number of X-days in accordance with the chart below if their line contains an absence such as vacation, and the same number of golden X-days as any other reserve pilot.

# of reserve days in a 30-day bid period	# of X days in a 30-day period	# of reserve days in a 31-day bid period	# of X days in a 31-day bid period
1	0	1	0
2-3	1	2-3	1
4-5	2	4-5	2
6-8	3	6-7	3
9-10	5	8-9	5
11-12	6	10-12	6
13-14	7	13-14	7
15-17	8	15-16	8
18-19	9	17-18	9
20-21	10	19-21	10
22-24	12	22-23	12
25-26	13	24-25	13
27-28	14	26-27	14
29-30	15	28-29	15
		30-31	16

The earliest a trip can be assigned to a ULC reserve pilot is 24 hours from the end of their last X-day, as opposed to as early as ten hours from the end of a normal reserve pilot's X-day. ULC reserve pilots may only be assigned trips after all long call and short call reserve pilots (in and out of base) have been exhausted and after MBL/CBL WS awards. Out of base reserve assignments to a ULC reserve pilot are not permitted, a ULC reserve pilot may not be converted to short call.

Required Pre-release Schedule Check (12 G. 8.)

Reserve pilots are required to check their schedule via iCrew or the IVR prior to release of their rotation. They can be assigned:

1. A rotation reporting as soon as 18 hours after release (24 hours for a ULC reserve pilot)
2. Short call beginning as soon as 18 hours (for other than a ULC reserve pilot), or
3. Rest beginning immediately upon release

A reserve pilot may be awarded a YS or a GS for a rotation or short call period that begins earlier, so long as FAR rest requirements are met.

Reserve Trip Assignments

The assignment of rotations to reserve pilots is a manual process which follows the steps of coverage listed in **Section 23 N.** (for rotations reporting 18 or more hours after the initial attempt to contact (the long notice ladder) and **Section 23 O.** (for rotations reporting less than 18 hours after the initial attempt to contact (the short notice ladder). Rotations for the second day are covered between 0800 and 2400 pilot base time. Rotations for the same/next day are covered as they become known.

Exception: MAC rotations that begin with an off-line deadhead will be covered up to three days prior to the rotation, so long as the rotation has been available for at least four PCS runs.

As Crew Scheduling will begin to cover rotations up to two days prior to report (second-day coverage), a long call pilot could be assigned a rotation reporting in as many as 48 hours or more. Such a pilot will remain on long call until 24 hours prior to report for the rotation that they have been assigned, then automatically released from any Company obligation.

Reserve Utilization Order (23 A 52. & 23 S. 1.)

Reserve Utilization Order (RUO) is an order of assigning open time to reserve pilots, within days-of-avail- ability groupings, which is based upon a comparison of Reserve Assignment Weighting (RAW) value groupings (“buckets”), seniority, and pilot preferences.

Open time is awarded/assigned to reserve pilots within the days-of-availability grouping that matches the length of the rotation(s) being covered, beginning with the lowest RAW bucket and then progressing to higher RAW buckets. Within each RAW bucket, pilots who have submitted yellow slips (YS) are considered first, in seniority order. If there are insufficient pilots who have submitted a YS, then the remaining pilots are considered in inverse seniority order. If there are still insufficient pilots, then pilots in the next higher days-of-availability grouping are considered.

Definitions

“Credited reserve on-call (CROC) day” means a day on which a reserve pilot:

- a. is on a rotation,
- b. receives pay and credit under *Section 4 H.*, c . is on sick leave on an on-call day.

“Days-of-availability groupings” means, for:

- Narrowbody categories
 - o One day
 - o Two days
 - o Three days
 - o Four or more days
- Widebody categories:
 - o One day
 - o Two days
 - o Three days
 - o Four days
 - o Five or more days

“Reserve Assignment Weighting” (RAW) means a value assigned to a reserve pilot that is based on their accumulated credit in a bid period, their CROC days in a bid period, and their number of short-call credits in a bid period. A reserve pilot’s RAW is used to sequence them for assignment to open time. Such value will be calculated using the following formula, rounded to the nearest integer:

Reserve Assignment Weighting = $[(A \div C) \times 75] + [(B \div D) \times 100] + (E \times 5)$, where:

A = the reserve pilot’s credit hours accumulated in the bid period plus prorated credit hours associated with their period of unpaid absence and/or vacation and/or training (other than qualification or distributed training), if any. The number of prorated hours associated with their period of unpaid absence and/or vacation and/or training (other than qualification or distributed training) will be determined by multiplying the number of days of their unpaid absence and/or vacation and/or training (other than qualification or distributed training) by the reserve guarantee and then dividing that product by 30 or 31 (days of the bid period).

B = the reserve pilot’s CROC days plus prorated CROC days associated with their period of absence other than sick leave, if any (e.g., vacation, training, MLOA, PLOA). The number of prorated CROC days associated with their period of absence other than sick leave will be determined by multiplying the number of days of their absence by 16, 17, or 18 (on-call days per bid period) and then dividing that product by 30 or 31 (days of the bid period).

C = the reserve guarantee.

D = number of on-call days in a full month of reserve.

E = the number of short-call periods for which the pilot has been credited in the bid period.

Multiple Rotations to Cover

When Crew Scheduling has multiple trips to cover and not enough pilots in a particular RAW value bucket to cover the known open rotations, they will first draw pilots from other RAW value buckets in the same days of availability and then move to days of availability that exceed the length of the rotation in the lowest RAW value bucket. Once Crew Scheduling has identified which pilots are required to fly the open rotations, then seniority and YS (among those pilots) requests are used for the actual assignment of rotations. In other words, the 'group of pilots' identified and required to fly the open rotations (from whatever RAW group & days of availability), all become equal for rotation assignments and will be assigned rotations based on YS requests and seniority.

There is a possible situation where a YS of a senior pilot could be denied. For example, if there were 2 rotations to cover one checking in at 1400 and the other at 0800. The senior pilot of the two pilots identified and required to fly has placed a YS for the 1400 report rotation and the other pilot who has been identified and required to fly is coming off X-days and did not place a YS request in the iCrew. The senior pilot is a long call pilot and not on an X-day. The junior pilot coming off X-days cannot be required to report prior to 1000 per **Section 23 S. 2. a. 5)**. If the senior pilots YS is awarded, Crew Scheduling would be required to identify another pilot who otherwise was not required to fly and be given the 0800 report. Since the YS required another pilot to fly, it can be denied and the senior pilot given the 0800 report and the junior pilot given the 1400 report. A YS cannot force another pilot to be assigned a rotation that otherwise was not required to fly.

Crew Scheduling will use a pilot's projected status at the time of report for the rotation being covered to determine if they are a long-call or short-call pilot in the coverage ladders. The pilot's status at the time of coverage is not considered.

Example: Rotation 1234 reports at 1200 on the 5th and is being covered at 1300 on the 4th. Pilot A is on short call between 1000 on the 4th and 2200 on the 4th. Pilot B is on short call between 1000 on the 5th and 2200 on the 5th. Pilot A would be considered under the long-call pilot steps of coverage and Pilot B would be considered under the short-call pilot steps of coverage during the coverage of rotation 1234.

RAW Value Bucket System FAQs

Q: Does a pilot get "credit" for short call?

A: A pilot's RAW value will increase by five for each short-call period credited to the pilot in the bid period. In order to be credited for a short-call period, a pilot must have actually begun the short-call period. Note: A pilot who calls in sick during a short-call period will not be credited for that short-call period.

Q: The RAW buckets (RAW value groupings) are too big/small. Can they be changed?

A: The number and size of RAW buckets will be set for a given bid period and made available on the Crew Resources and Scheduling page of DeltaNet no later than the last day of the prior bid period. The current RAW buckets are:

Equipment	# of Buckets	Bucket 1 RAW value range	Bucket 2 RAW value range	Bucket 3 RAW value range	Bucket 4 RAW value range
717, M88, 320, 737, 7ER	4	0-80	81-129	130-162	163 or more
330, 765, 350	3	0-80	81-161	162 or more	

The system is designed to allow a pilot to exercise their seniority, up to a point. The ranges can be changed by mutual agreement between the chairman of the Scheduling Committee and the director of

Crew Resources and Scheduling. However, polling data indicates that the current ranges are consistent with the desires of the pilot group.

Q: Why don't I get RAW credit for my vacation that is scheduled for the end of the month?

A: Absences are not included in the RAW calculation until they actually begin. RAW value is intended to be a measure of the amount of work already performed in the bid period. As an extreme example, a pilot with three weeks of vacation at the end of the month would start the bid period in RAW Bucket 2 if their vacation were counted toward their RAW value and would likely not be used for any flying even though they have on-call days at the beginning of the bid period.

Q: How do various activities on my schedule affect my RAW value?

A: Several factors contribute to a pilot's RAW value. The formula can be found in **Section 23 A. 46**. The chart below has some common examples.

Schedule Activity	Amount Added to RAW Value
One short-call period	5.00
One day/week of vacation	5.83/40.83
Five hours of accumulated credit	5.36
One day on a rotation (CROC day)	5.56 (in addition to the amount added for the credit of that day)
One day of MLOA	5.83

Q: Why was I assigned a trip when I'm in Bucket 2 and there are pilots in Bucket 1?

A: The most common reason is that the pilots in Bucket 1 do not have the same days of availability. Pilots are divided first by days of availability, and then by RAW bucket. It is also possible that the pilots in Bucket 1 are not legal for the trip due to FAR or PWA restrictions.

Yellow Slips and Reserve Preference Qualifiers (23 T.)

The reserve system assumes a pilot *does not* wish to be assigned any flying or short call if the pilot has not submitted a YS.

A YS request may indicate a reserve pilot's desire to be considered first in sequence for:

- flying on on-call days
- being awarded short call periods from Reserve Open Time
- being awarded additional on-call days
- being awarded Reserve with Conflict rotations
- being awarded Voluntary Airport Standby (VAS) periods
- flying on X-days

A reserve pilot's YS may stipulate:

- a rotation(s) and/or date(s) on which they desire to fly,
- date(s) and/or start time(s) on which they desire to be converted to short call, and
- any of the parameters set forth in the PCS YS template.

A reserve pilot's preference qualifiers may indicate their preferences to be considered only if they are needed:

- to fly, or
- for short call.

A reserve pilot's Spillover Preferences may indicate their willingness to be assigned a carryout rotation into a bid period in which they are either a regular pilot, or a reserve pilot in a different category.

Earlier RAW Value Grouping (23 S. 1. a. Note one Exception)

A reserve pilot whose RAW value places them in the second RAW value grouping, may submit a YS to have their preferences considered in seniority order as if the pilot were in the first RAW value grouping.

For example, assume it is later in a bid period and your RAW value places you in the second RAW value grouping and you desire to be awarded additional flying. You have the option, but not the requirement, to submit a YS for certain days or rotations and to be considered in seniority among pilots in the first RAW value grouping.

Select Preference Qualifiers				To Be First For Flying						
Employee:		Seniority:		Category:		Bid period:				
Reduce raw bucket (y/n):		No		Reduce days of availability grouping (y/n):		No				
Enter Specific Rotations: (Rotation # / ddmmmm)										
1: [] / [] Oct		and/or		2: [] / [] Oct		and/or		3: [] / [] Oct		
- AND/OR -										
Enter Date Ranges:										
[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct
[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct
[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct		[] Oct	Thru:	[] Oct

Note that the option (in the red box) to reduce your RAW value grouping (bucket) defaults to No

on the YS template to be considered first for flying, either on on-call days or on X-days. Changing that to Yes will cause Crew Scheduling to consider you in seniority order among pilots in the first RAW value grouping.

Lower Days-of-Availability Grouping (23 S. 1. a. Note two Exception)

In addition, a reserve pilot may preference a trip that is equal to their days-of-availability or to their days-of-availability *minus one*. This provision will be available any time that the number of pilots with the same days-of-availability is equal to the number of open trips of that length, *plus one*, including the pilot in question.

For example, suppose a reserve pilot in the three-day days of availability grouping desires to be awarded a two-day rotation for the following day. They would have the option to select Yes to Reduce Days of Availability Grouping in the blue box above. Suppose now that there are four three-day rotations available in open time for that same day. The pilot will be awarded their YS request for the two-day rotation, so long as:

- The pilot in question is the most senior two- or three-day reserve pilot requesting the rotation, and
- There are at least five three-day pilots available, including the pilot in question.

Preference Qualifiers If Needed to Fly or for Short Call (23 S. 18.)

The process by which Crew Scheduling considers Yellow Slips (YS) and *Preference Qualifiers If Needed* is as follows:

1. At the time the trip coverage report is created, Crew Scheduling is required to first determine how many pilots are needed prior to starting assignments.
2. Once the scheduler determines how many pilots are needed to cover the number of rotations on the trip coverage report, the scheduler will look to see if any submitted an 'Only if Needed' qualifier. If one of those pilots submitted a *Preference Qualifier If Needed to Fly*, the preference is treated identically to a YS and the pilot's qualifiers and quantifiers will be considered in seniority order.
3. Crew Scheduling will then assign rotations from the current trip coverage report as described under PWA **Section 23 S. 1. a.**

Note that submitting a *Preference Qualifier If Needed to Fly* does not increase your chances of being assigned a rotation or a short call. These preferences will be used only if Crew Scheduling determines via the trip coverage report that you are needed to fly. *Preference Qualifiers If Needed to Fly* and YS will be used in seniority order to determine which rotations are assigned to the identified pilots, then inverse seniority order for any remaining rotations.

Example 1

There are three pilots available. In seniority order, they are Pilots 1 through 3, all in Bucket 1, all with three days of availability. There are two three-day rotations being covered and all three pilots are legal for both rotations. None of the three pilots have submitted a YS, but they have all submitted *Preference Qualifiers if Needed to Fly*.

Result:

- Pilots 2 and 3, being the most junior, will be identified as the pilots needed to fly
- Pilot 2 will be assigned one of the two rotations according to their preferences and Pilot 3 will be assigned the remaining rotation
- If neither rotation matches the preferences of Pilot 2, then Pilot 3 will be assigned a rotation according to their preferences and Pilot 2 will be assigned the remaining rotation
- If neither rotation matches either pilot's preferences, the rotations will be assigned at the scheduler's discretion

Example 2

There are ten pilots available. In seniority order, they are Pilots 1 through 10. Pilots 1 - 5 have three days of availability. Pilots 6 and 7 have two days of availability. Pilots 8-10 have four or

more days of availability. The pilots have different RAW values but are all in the same RAW value grouping.

Three rotations are being covered (A, B, and C). Rotation A is a two-day rotation. Rotations B and C are three-day rotations.

Pilot 4 has submitted *Preference Qualifiers if Needed to Fly* that match rotation B, Pilot 5 has submitted a YS for rotation B, and Pilot 6 has submitted a YS for rotation A.

Result:

- The longer rotations (B and C) are covered first
- Pilots 4 and 5, being the most junior with three days of availability, are identified to fly rotations B and C (Pilot 5 would have been identified, regardless of their seniority, as they had submitted a YS for Rotation B)
- Rotation B is assigned to Pilot 4 per their preferences, as they are more senior of the two pilots that have been identified to fly, as their *Preference Qualifier If Needed to Fly* now carries the same weight as a YS
- Rotation C is assigned to Pilot 5
- Rotation A is awarded to Pilot 6 as a YS

Additionally, when Crew Scheduling determines how many short call pilots are needed each day, it does so by creating a short call management list that identifies eligible short call pilots. Just like a *Preference Qualifier If Needed to Fly*, the *Preference Qualifier If Needed for Short Call* will not increase your chances of being assigned a short call. You will only be assigned short call if you would have been assigned short call without the preference. At no time will a *Preference Qualifier If Needed* make a senior pilot fly or be assigned short call before a junior pilot, unless that senior pilot has submitted a YS for such assignment.

Reserve Spillover Preferences (23 G. 10.)

A reserve pilot who is either a regular pilot, or a reserve pilot in a different category, in the next bid period will not be assigned a rotation that begins in one bid period and ends in the next unless they have specifically requested such a rotation via their Reserve Spillover Preferences. Any such assignment will be a *proffer* to the pilot, with no obligation to accept.

This will be true regardless of whether the reserve rotation would interrupt one or more regular line days off or rotations, or whether it would interrupt the reserve pilot's X-days or on-call days in the following bid period.

Note: A reserve pilot who holds a reserve line in the following bid period in the same category is subject to being assigned a spillover rotation on their on-call days. Spillover preferences are not considered in this situation, and such an assignment is NOT a proffer.

A pilot who accepts such a proffer will be paid as follows:

- If the pilot holds a regular line in the subsequent bid period and the rotation conflicts with one or more regular line rotations, they will receive in the subsequent bid period:
 - Single pay and credit for the greater of the carry-in portion of the reserve rotation or the conflicting regular line rotation(s), plus
 - Single pay, no credit for the portion of the rotation that interrupts their scheduled regular line days off.
- If the pilot holds a regular line in the subsequent bid period and the rotation does not conflict with a regular line rotation, they will receive:
 - Single pay and credit for the carry-in portion of the reserve, plus
 - Single pay, no credit for the portion of the rotation that interrupts their scheduled regular line days off.
- If the pilot holds a reserve line in a different category in the subsequent bid period, they will receive:

- Single pay and credit for the carry-in portion of the reserve rotation (applied against their reserve guarantee), plus
- Single pay, no credit for the portion of the rotation that interrupts their scheduled X-days (above their reserve guarantee).
- **Any interrupted X-days will be lost. No additional time free from duty / payback day(s) are applied to a pilot's schedule in this scenario, as they would with a GS award.**

Example one:

<u>Day</u>	Reserve Line			Regular				
	29	30	31	1	2	3	4	5
Schedule	Res	Res	Res	Off	Off	Off	A	B
Reserve Rotation	A	B	C	D				

Result: The pilot will receive single pay and credit of the value of A, B, and C days of their reserve rotation applied toward their guarantee in the first bid period and single pay and credit for the value of D day in the second bid period, plus single pay no credit for D day because their reserve rotation interrupted a regular line day off.

Example two:

<u>Day</u>	Reserve			Reserve in a Different Category				
	29	30	31	1	2	3	4	5
Schedule	Res	Res	Res	XX	XX	XX	Res	Res
Reserve Rotation		A	B	C	D			

Result: The pilot will receive single pay and credit of the value of A and B days of their reserve rotation applied toward their guarantee in the first bid period and single pay and credit for the value of C and D days in the second bid period. They will also receive single pay, no credit (above the guarantee) for the value of C and D days because they interrupt X-days. The X-days will not be moved.

Example three:

<u>Day</u>	Reserve			Regular				
	29	30	31	1	2	3	4	5
Schedule	Res	Res	Res	Off	A	B	C	D Reserve
Rotation		A	B	C	D			

Result: The pilot will receive single pay and credit of the value of A and B days of their reserve rotation applied toward their guarantee in the first bid period and single pay and credit for the greater of the value of their regular line rotation (from which they are removed entirely) or C and D days of their reserve rotation in the second bid period. They will also receive single pay, no credit for C day of the reserve rotation because it interrupts a regular line day off.

Example four:

<u>Day</u>	Reserve			Reserve in a Different Category				
	29	30	31	1	2	3	4	5
Schedule	Res	Res	Res	XX	XX	Res	Res	Res

Result: The pilot will receive single pay and credit of the value of A day of their reserve rotation applied toward their guarantee in the first bid period and single pay and credit of the value of B, C, and D days of in the second bid period. They will also receive single pay, no credit (above the guarantee) for the value of B and C days because they interrupt X-days. The interrupted X-days will not be moved.

Conflicting Green Slip (GS) Award with Spillover Assignment

Section 23 Q. 6. c. Exception of the PWA provides that a reserve pilot will be awarded:

- A same-day GS without regard to a reserve award/assignment already on their schedule for the next two days, i.e., a reserve rotation, short call, or YS award, or
- A next-day GS without regard to a reserve award/assignment already on their schedule for the second day.

If the conflicting reserve assignment was a proffered spillover rotation assignment, the pilot will forfeit any pay, including premium, for that spillover assignment.

For example, assume a reserve pilot who holds a regular line in the following bid period has accepted the proffer of a spillover rotation assignment, as shown below.

	Reserve			Regular				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	Res	Res	Res	Off	A	B	C	D
Reserve Rotation		A	B	C	D			

Because the spillover rotation was assigned via the pilot's spillover preferences, the pilot is paid as follows:

A and B Days: single pay and credit toward RES guarantee in 1st bid period

C and D Days: Single pay and credit for the greater of the sum value of C and D days or the value of the regular rotation from which they were removed, plus single pay, no credit for C Day for interrupting the pilot's REG day off.

If this pilot now accepts the proffer of a GS rotation on the 29th that conflicts with their previously assigned spillover rotation, they will lose all pay for the conflicting spillover rotation, including pay for the previously dropped regular line rotation in the second bid period. They will be paid only for the GS rotation.

Awards vs Assignments

The following discussion is intended to clear up any misunderstanding as to the difference between submitting a yellow slip (YS) for a spillover rotation and submitting Reserve Spillover Preferences for that same rotation.

A reserve pilot may be ASSIGNED flying under the procedures found in *Section 23 S.* of the PWA. These procedures include an 18-hour leash for long call pilots, no assignments reporting earlier than ten hours after the end of a non-fly day, etc., and have been detailed earlier in this Reserve chapter of the SRH.

The AWARD of a rotation to a reserve pilot on their YS is subject to fewer restrictions. It can occur with less than 18 hours' notice, on an X-day, after the pilot is FULL, etc.

Yellow Slip Requests

A YS for flying is a reserve pilot's request to be AWARDED flying *ahead of where they would otherwise fall in the trip coverage sequence*. Beyond being utilized to express "first for

flying” or “if needed” preferences for open time, YS requests can also be made to:

- Fly on or into X-days
- Be awarded flying:
 - With less than the normal 18 hours’ notification
 - That reports earlier than ten hours after the end of the pilot’s last non-fly day prior to an on-call day
 - That flies into the following bid period.

These awards will be processed at the appropriate step in the coverage sequence prescribed by *Sections 23 N. or 23 O.*, as applicable. Below are the trip coverage steps in *Section 23 N.* by which a reserve pilot may be *awarded* a rotation their YS.

3. LC pilots
4. SC pilots
5. Reserve pilots on or interrupting X-day
7. OOB LC pilots
8. OOB SC pilots
9. OOB Reserve pilots on or interrupting X-day

Note: Steps 3, 4, 7, and 8 also pertain to reserve *assignments*. If such an assignment flies into the following bid period and the pilot is reserve in a different base, spillover preferences apply, and the assignment is a proffer

A reserve pilot who has been AWARDED a rotation on their YS will receive:

- Single pay and credit for the rotation, regardless of whether it interrupted any reserve or regular line days off.
- If the rotation creates a conflict with a regular line rotation in the following bid period, the conflicting rotation in the following bid period will be dropped in its entirety with no pay.
- *No additional time free from duty or payback days are applied to a pilot’s schedule in this scenario.*

Reserve Spillover Preferences

A reserve pilot’s spillover preferences indicate their willingness to consider the PROFFER of a reserve ASSIGNMENT to flying that begins in one bid period and ends in the next if they are either:

- A regular pilot, or
- A reserve pilot in a different category, in the next bid period.

Such an *assignment* will be *processed at a later step in the coverage sequence than a YS would have been*. For example, in *Section 23 N.* the following steps apply to a reserve spillover *assignment*:

10. LC pilots into REG days off
11. SC pilots into REG days off
12. OOB LC pilots into REG days off
13. OOB SC pilots into REG days off
14. LC pilots into conflicting REG rotation
15. SC pilots into conflicting REG rotation
16. OOB LC pilots into conflicting REG rotation
17. OOB SC pilots into conflicting REG rotation

This is a reserve *assignment* that:

- May not interrupt a pilot’s X-days in the current bid period
 - May interrupt a pilot’s X-days in the following bid period, assuming they are in a different category
 - May report no earlier than ten hours after the end of a reserve pilot’s last non-fly day
- Note: An assignment that reports between ten and 18 hours after the end of a reserve pilot’s last non-fly day prior to an on call day must be placed on the pilot’s schedule no

later than 12 hours prior to the end of their last non-fly day. In the case of the proffer of a spillover rotation with such a report, Crew Scheduling will call the pilot prior to the 12-hour point to offer the rotation. The pilot will then have ten minutes to accept the proffer.

- May not be made after the pilot's accumulated credit equals or exceeds their reserve guarantee, i.e., pilot is FULL
- May not cause the pilot's projection to exceed, or further exceed, ALV +15

When Crew Scheduling reaches one of these later steps in trip coverage, they will look for a reserve pilot who has submitted Reserve Spillover Preferences whose stipulations match the rotation in question. If successful, they will attempt to notify the pilot to offer them the assignment. The pilot is free to accept or decline the proffer.

A pilot who accepts such a proffer will be paid as follows:

- If the pilot holds a regular line in the subsequent bid period and the rotation does not conflict with a regular line rotation, they will receive:
 - Single pay and credit for the carry-in portion of the reserve rotation, plus
 - Single pay, no credit for the portion of the rotation that interrupts their scheduled regular line days off.
- If the pilot holds a regular line in the subsequent bid period and the rotation conflicts with one or more regular line rotations, they will receive in the subsequent bid period:
 - Single pay and credit for the greater of the carry-in portion of the reserve rotation or the conflicting regular line rotation(s), plus
 - Single pay, no credit for the portion of the rotation that interrupts their scheduled regular line days off.
- If the pilot holds a reserve line in a different category in the subsequent bid period, they will receive:
 - Single pay and credit for the carry-in portion of the reserve rotation (applied against their reserve guarantee), plus
 - Single pay, no credit for the portion of the rotation that interrupts their scheduled X-days (above their reserve guarantee).
 - Any interrupted X-days will be lost. No additional time free from duty / payback day(s) are applied to a pilot's schedule in this scenario, as they would have been with a GS award.

Pay Treatment Examples of Award vs Assignment of Spillover Rotations

Example one:

	Reserve			Regular				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	Res	Res	Res	Off	Off	Off	A	B
Reserve Rotation	A	B	C	D				

If Awarded via YS:

Single pay and credit toward RES guarantee in 1st bid period and single pay and credit in 2nd bid period

If Assigned via Spillover Preferences:

A, B, C: single pay and credit toward RES guarantee in 1st bid period

D: Single pay and credit *plus* single pay no credit for interrupted REG day off

Note: If the pilot is on an X-day on the 28th of the first bid period, they are not eligible to be assigned this rotation via their Spillover Preference if it reports prior to 1000 pilot base time, but they may be awarded the rotation on their YS.

Example two:

Reserve				Reserve in a Different Category				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	Res	Res	Res	XX	XX	XX	Res	Res
Reserve Rotation		A	B	C	D			

If Awarded via YS:

Single pay and credit toward RES guarantee for entire rotation. Interrupted X-days NOT moved.

If Assigned via Spillover Preferences:

A, B: single pay and credit toward RES guarantee in 1st bid period

C, D: Single pay and credit toward RES guarantee *plus* single pay no credit for interrupted X-days in 2nd bid period. X-days will not be moved.

Example three:

Reserve				Regular				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	Res	Res	Res	Off	A	B	C	D
Reserve Rotation		A	B	C	D			

If Awarded via YS:

A, B: Single pay and credit toward RES guarantee in 1st bid period.

C, D: Single pay and credit toward RES guarantee in 2nd bid period. No pay for the regular rotation that they are removed from entirely.

If Assigned via Spillover Preferences:

A, B: single pay and credit toward RES guarantee in 1st bid period

C, D: Single pay and credit for the greater of the sum value of C and D days or the value of the regular rotation that they were removed from entirely, plus single pay, no credit for C day for interrupting REG day off.

Example four:

Reserve				Reserve in a Different Category				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	Res	Res	Res	XX	XX	Res	Res	Res
Reserve Rotation			A	B	C	D		

If Awarded via YS:

Single pay and credit toward RES guarantee for entire rotation. Interrupted X-days NOT moved.

If Assigned via Spillover Preferences:

A: single pay and credit toward RES guarantee in 1st bid period

B, C, D: Single pay and credit toward RES guarantee in 2nd bid period *plus* single pay, no credit for B and C days for interrupting X-days. X-days NOT moved

Example five:

Reserve				Reserve in a Different Category				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	XX	XX	RES	XX	XX	Res	Res	Res

Reserve Rotation		A	B	C	D	E		
------------------	--	---	---	---	---	---	--	--

If Awarded via YS:

Single pay and credit toward RES guarantee for entire rotation. Interrupted X-days NOT moved.

Note: This pilot cannot submit spillover preferences for, nor be assigned, this rotation, as they are not on call every day it operates in the first bid period.

Example six:

Reserve				Reserve in a Different Category or Regular				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	PB	PB	PR					
Reserve Rotation			A	B	C	D		

If Awarded via YS:

Single pay and credit toward RES guarantee for entire rotation. Interrupted X-days NOT moved. Any conflicting regular line rotation in the 2nd bid period will be dropped with no pay.

Note: This pilot can only submit spillover preferences for, and be assigned, this rotation if it reports at least ten hours after the end of the pilot's PR. If the rotation reports 10-18 hours after the end of the PR, Crew Scheduling must call the pilot to offer them the rotation no later than 12 hours prior to the end of the PR. The pilot will then have ten minutes to accept the proffer.

Example seven:

Reserve				Reserve in a Different Category or Regular				
Day	<u>29</u>	<u>30</u>	<u>31</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
Schedule	XX	FULL	FULL					
Reserve Rotation			A	B	C	D		

If Awarded via YS:

Single pay and credit toward RES guarantee for entire rotation. Any conflicting regular line rotation in the 2nd bid period will be dropped with no pay.

Note: This pilot cannot submit spillover preferences for, nor be assigned, this rotation, as they are no longer on call in the first bid period due to having reached their reserve guarantee.

Summary

Submitting a YS for a spillover rotation will increase the likelihood of being awarded the rotation but will generate no premium pay in the second bid period, nor will a pilot receive any pay for a conflicting rotation in the second bid period that is dropped. A pilot's Reserve Spillover Preferences will be processed and proffered on a later step of trip coverage than a YS, but will result in premium pay for flying on a pilot's scheduled days off in the second bid period and pay protection for any conflicting rotations that are dropped.

Pilot to Pilot X-Day Swaps (23 F.)

A reserve pilot may use the Pilot-to-Pilot Swap Board to swap their X-Day(s) with another reserve pilot in the same category. Any swaps will be required to follow current moving X-Day rules found in *Section 12 M. 8.* and *9.* of the PWA.

- An X-day swap may only involve the first or last X-day(s) of a group of X-days
- An X-day swap cannot create an additional need for a 30-hour rest period, nor can it cause a stretch of on-call days to be reduced below the applicable minimum on each pilot's schedule
- Like moving X-days, a posted X-day swap would need to be executed by another pilot at least 72 hours prior to the earlier of the X-day(s) being swapped

In effect, two pilots may only swap X-days if each pilot's resulting schedule could have been achieved via a legal X-day move in PCS. Said another way, a pilot cannot accomplish anything via an X-day swap with another pilot that they could not have achieved by moving their own X-days. The X-day swap provision merely serves to eliminate the need for adequate reserve coverage on the days to be swapped.

Note that X-days may only be swapped between two pilots in the same category in equal numbers. That is, the X-day strings being swapped must be equal in length.

Offering an X-Day Swap

Offering to swap one or more of your X-days to another reserve pilot in your category is similar to posting a rotation on the Pilot to Pilot Swap Board. First, open your calendar in MiCrew and select the X-day(s) you wish to swap. Now swipe right for the Post X-Day Swap option. When you select the new option for X-Day Swap, a new screen will appear that will allow you to denote the dates of the X-day(s) for which you'd like to swap.

Once you have clicked on Next, a review screen will appear allowing you to confirm your selections. Selecting Post Trip will cause your proposed X-Day Swap to appear on your list of active postings on the Swap Board.

In line with the requirement of *Section 12 M. 8.*, your offered X-day swap will be removed from the Swap Board 72 hours prior to earliest date involved in the swap.

Viewing and Accepting an Offered X-day Swap

To view offered X-day swaps, open the Swap Board menu in MiCrew and select the "X-days" option from the search menu. You can review offered X-day swaps and accept an X-day swap in the same manner that you would view and accept offered rotations on the Swap Board. If you have the X-day(s) sought in the swap and if that X-day(s) is at the beginning or end of a string of X-days on your line, you can accept the X-day swap in the manner that you would accept a rotation swap. Be sure to contact the other pilot first to receive their concurrence if the swap was not posted as Just Put Through.

Reserve With Conflict (RWC) (23 S. 19.)

A reserve pilot who has been assigned a rotation is automatically released from their obligation to be contactable and enters “pre-report rest” **either 24 hours before their report or immediately upon assignment if the report is within 24 hours**. A reserve pilot may indicate their desire to be awarded an RWC rotation via their yellow slip request during this **pre-report rest** period. RWC rotations will be proffered to such pilots, **as described later in this section**; the rotations may report earlier or later and may be of a different length than the reserve pilot’s previously assigned rotation.

Should a pilot accept the proffer, the pilot will receive single pay and credit for the removed rotation, or as the RWC rotation flown, whichever is greater.

To be eligible for an RWC rotation that begins with an FDP, a reserve pilot must have at least ten hours of prospective rest before the scheduled report of the RWC rotation. **The reserve pilot must also be a long call pilot who has already entered their pre-report rest period.** This means that a pilot on their first on call day following a **non-fly day** cannot be awarded an RWC rotation that begins with an FDP that reports **earlier than ten hours after the end of their non-fly day**.

However, a reserve pilot who has entered their pre-report rest is eligible to be awarded an RWC with less than ten hours’ notice, so long as they will have been on rest for at least ten hours prior to reporting for the RWC rotation that begins with an FDP. An RWC will not be awarded to a pilot while on their X-day.

Examples:

1. A pilot who has been assigned reserve flying on their first on-call day following X-days may be awarded an RWC rotation reporting no earlier than 1000 pilot base time.
2. A pilot whose day begins with a PR ending at 0400 and who has been assigned reserve flying reporting later that day may be awarded an RWC rotation reporting no earlier than 1400 pilot base time.
3. Assume that a pilot is contacted by Crew Scheduling at 1000 on Monday and assigned a rotation reporting at 1200 on Tuesday. The pilot will enter their pre-report rest at 1200 on Monday. They are now eligible to be awarded an RWC rotation with an FDP that reports no earlier than 2200 on Monday, and may be notified of the award at any time after 1200 on Monday.

An RWC award must conflict with an assigned reserve rotation. It cannot conflict with an assigned short call period, nor can it conflict with a rotation that was awarded via a pilot’s YS or GS. The conflict may be caused by an FAR or PWA violation or a physical overlap.

A reserve pilot may enter their RWC request via the YS template as shown in the red box below:

**Reserve Preferences And Slips**

Name:

Seniority:

Employee number:

Bid period

- Yellow Slip To Be First For Flying On On-call Days
- Preference Qualifiers To Be Used Only If Needed To Fly
- Yellow Slip To Be First In Sequence For Short Call
- Preferences To Be Used Only If Needed For Short Call
- Yellow Slip To Be First For Flying On Xday(S)
- Yellow Slip For Additional On-call Days
- Spillover Preferences
- **Reserve With Conflict**

A pilot's RWC request may include any of the parameters normally found on the YS template, including whether they wish to be awarded a flying rotation, a VAS period, and/or a standby rotation. Because an RWC request is a YS, if the awarded RWC rotation interrupts one or more X-days, those X-days will be forfeit. Similarly, if the RWC rotation also causes a conflict with a regular line rotation in the following bid period, that rotation will be dropped with no pay. (Toward the end of the January 2024 bid period, the YS template will include a box in which the pilot must select Yes or No whether they wish to be awarded a rotation that would cause a rotation in the following bid period to drop.)

If the scheduler has exhausted all steps of trip coverage through GS requests for a particular rotation, they will turn to pilots who have submitted RWC requests. Under **Section 23 N. 23.** or **O. 17.**, the scheduler will proffer the rotation to pilots that have submitted RWC requests and are in their pre-report rest for a reserve assignment, in seniority order regardless of their RAW value or days of availability groupings.

The scheduler will call these pilots in turn, giving each at least 12 minutes to respond before moving on to the next pilot or step of coverage. If a pilot accepts the proffer, the scheduler will provide the same amount of time to report as if for a short call assignment. Once the pilot has completed their RWC rotation, they will have the normal pre-release schedule check requirement, and will resume on-call status if on-call days remain on their line.

A pilot who is coming off of X-days and has been assigned a rotation on their first on call day is eligible for an RWC award, but only if the awarded rotation is scheduled to report at 1000 or later, as the pilot's rest was momentarily broken at midnight as they came off of their last X-day. In addition, such a pilot will only be considered for an RWC award once they have begun their first on-call day and are in their pre-report rest period.

Once a pilot has been awarded an RWC award, their schedule will show both the RWC award (coded as R in Daily Trip Coverage) and the conflicted rotation that was dropped, as shown below:

18M	RES							18M
19T	RES	CONF	0500		5009	R	0859	19T
20W	RES	CONF	----		----	R		20W
21T	RES	CONF	----		----	R		1240 21T
22F	RES							22F

Example 1:

Date	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	RES	RES	RES	RES	X	X	X
Assigned Rotation				3305	3305	3305			
RWC Rotation			0123	0123					

At 0900 on the 10th, this pilot is assigned rotation 3305, reporting at 0600 on the 11th, and worth 16:30. They immediately go into pre-report rest and submit a RWC request for a shorter rotation reporting at any time. They cannot be awarded an RWC for a rotation that begins with an FDP that reports earlier than 1900 (ten hours after they entered their pre-report rest.)

Later that day, the pilot accepts a proffer for rotation 0123, reporting at 2100 on the 10th, and worth 10:30. They will retain 16:30 pay and credit toward their reserve guarantee, and they will be back on long call upon release from their new rotation.

Example 2:

Date	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	RES	RES	RES	RES	X	X	X
Assigned Rotation			3305	3305	3305				
RWC Rotation			0123	0123					

At 0900 on the 9th, this pilot is assigned rotation 3305, reporting at 1000 on the 10th, and worth 16:30. They submit an RWC request for a shorter rotation reporting at any time. They cannot be awarded an RWC for a rotation that begins with an FDP that reports earlier than 1000, as their rest was momentarily broken at midnight, and they will only be considered for an RWC award if the rotation in question is being covered while they are on an on-call day.

The morning of the 10th, the pilot accepts a proffer of rotation 0123, reporting at 2100 on the 10th, and worth 10:30. They will retain 16:30 pay and credit toward their reserve guarantee, and they will be back on long call upon release from their new rotation.

Example 3:

Date	8	9	10	11	12	13	14	15	16
Pilot Schedule	X	X	RES	RES	RES	RES	X	X	X
Assigned Rotation				3305	3305	3305			
RWC Rotation				0123	0123	0123	0123		

At 0900 on the 10th, this pilot is assigned rotation 3305, reporting at 1000 on the 11th, and worth 16:30. They go immediately into pre-report rest and submit an RWC request for a rotation reporting at any time. They cannot be awarded an RWC for a rotation that begins with an FDP that reports earlier than 1900 on the 10th (ten hours after they entered their pre-report rest.)

The morning of the 11th, the pilot accepts a proffer of rotation 0123, reporting at 2100 on the 11th, and worth 24:30. This rotation interrupts the pilot's first X-day. Because an RWC request is a YS, the interrupted X-day is forfeit. The pilot will receive 24:30 pay and credit toward their reserve guarantee, and they will resume their remaining X-days upon release from their new rotation.

Example 4:

Date	29	30	31	1	2	3	4	5	6
Pilot Schedule	RES	RES	RES		3305	3305	3305		
Assigned Rotation		3301	3301						
RWC Rotation			0123	0123	0123				

At 0900 on the 29th, this pilot is assigned rotation 3301, reporting at 1000 on the 30th, and worth 12:00. They go immediately into pre-report rest and submit an RWC request for a rotation reporting at any time. They cannot be awarded an RWC for a rotation that begins with an FDP that reports earlier than 1900 on the 29th (ten hours after they entered their pre-report rest.)

The morning of the 30th, the pilot accepts a proffer of rotation 0123, reporting at 0900 on the 31st, and worth 17:30. The pilot will retain 12:00 pay and credit toward their reserve guarantee (the greater of their reserve assignment or the in-period portion of their RWC rotation and will receive pay and credit for the remaining portion of the RWC rotation in the new bid period.

Because the RWC award was pursuant to the pilot's YS and because it conflicts with rotation 3305 on their regular line, rotation 3305 will be dropped with no pay.

Reserve “Full”: What Does it Mean?

PWA *Section 23 S. 2. d.* states:

“A reserve pilot will not be required to remain on call after their accumulated credit equals or exceeds their reserve guarantee.”

Example 1:

- Category ALV is 78 hours and reserve guarantee is 76 hours
- Once a reserve pilot has accumulated at least 76 hours of credit, they are considered full and will not be required to remain on call for the remainder of the bid period

Example 2:

- Category ALV is 78 hours and reserve guarantee is 76 hours
- There are 30 days in the bid period
- Reserve pilot has 14 days of training in the bid period
- The pilot’s reserve guarantee is 40:32 (prorated due to the training, $16/30 \times 76$)
- Once the pilot has accumulated credit equal to or exceeding 40:32, they are considered full and will not be required to remain on call for the remainder of the bid period. The credit for their training will not be counted toward their accumulated credit for the purpose of determining if they are full.

For the purpose of determining if a reserve pilot is full per *Section 23 S. 2. d.*, the credit of a scheduled rotation on a reserve pilot’s line of time will be considered to be accumulated credit if the rotation is scheduled to report today, but not if it is scheduled to report tomorrow or later.

Once a reserve pilot is full, they are not required to remain on call through the end of the bid period. They may be awarded additional flying according to the following rules:

1. A reserve pilot who is full will be considered at rest for FAR legalities unless they are performing duty for the Company.
2. A reserve pilot who is full cannot be converted to short call during the remainder of the bid period.
3. **A reserve pilot who is full cannot be assigned a spillover rotation via Spillover Preferences.**
4. A reserve pilot who is full will remain eligible for yellow slip (YS) and green slip (GS) awards for rotations that match the stipulations of their request.
 - a. Crew Scheduling will attempt to contact them for such rotations.
 - b. They are not required to answer or reply to an attempted contact by the Company.
5. A reserve pilot who is full will not be contacted for a rotation that does not match the stipulations of their YS or GS request unless Crew Scheduling has reached an inverse assignment (IA) step of coverage. They are not required to answer or reply to an attempted contact by the Company.
6. A reserve pilot who is full will retain their status (on-call days or X-days) on the remaining days of their reserve schedule for the purposes of determining steps of coverage and pay treatment for awarded or assigned rotations.
 - a. They will be considered in RUO as a long-call pilot for any rotation that matches the stipulations of their YS request to be first in sequence for flying on on-call days.
 - b. They will be considered in RUO for any rotation that interrupts their X-days and matches the stipulations of their YS request to be first in sequence for flying on X-days.
7. A reserve pilot who is full will retain the ability to move X-days in accordance with the rules in *Section 12 M. 8.*
8. The days of the bid period remaining after the pilot is full are soft non-fly days (see *Section 23 A. 61.*). If the first day of the subsequent bid period is an on-call day, they may be assigned a rotation or short call reporting as early as 1000 on that day, so long as the assignment is placed on their schedule NLT 1200 on the last day of the bid period. Crew Scheduling will not notify them of such an assignment (see *Section 23 S. 2. a. 5*)).

Released to Rest No Later than 0600/1200 on the Day Prior to a Non-Fly Day

Section 23 S. 7. states “A long call pilot may be released from on-call duty at 0600 base time on their last on-call day prior to a soft non-fly day if the pilot contacts Crew Scheduling and requests to be released.”

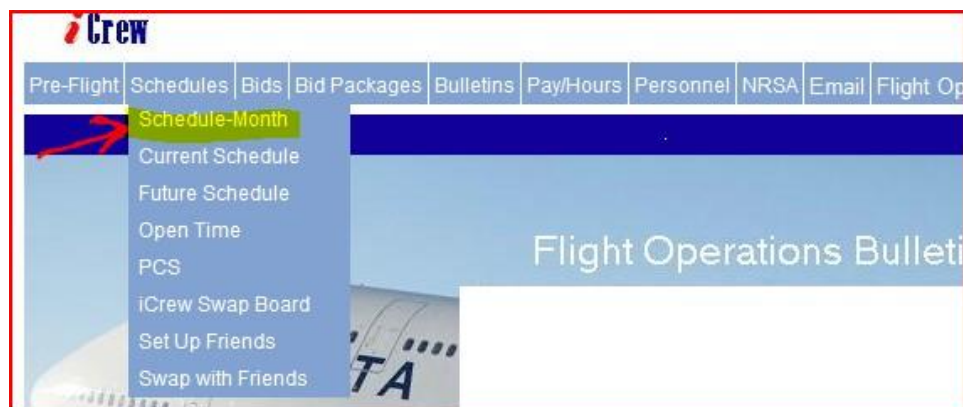

Section 23 S. 8. states “A long call pilot will be released from on-call duty at 0600 base time on their last on-call day prior to a hard non-fly day.”

Section 23 S. 9. f. states “A short call pilot will be released from on-call duty not later than 1200 base time on their last on-call day prior to a hard non-fly day.”

A hard non-fly day is defined as “a non-fly day on which a pilot may not be inversely assigned to a rotation (e.g., vacation, APD day, reserve PD day, ALPA, legal duty, MLOA, or golden X-day).” A soft non-fly day is any other non-fly day such, e.g., non-golden X-day, regular line day off, etc.

This states that a reserve pilot who has no trip assignment will be released **if going into a hard non-fly day and may be released going into a soft non-fly day**. You can verify your rest status in iCrew. If you do not have the proper rest history on file, you may be ineligible for extra flying when Crew Scheduling awards flying (GS, WS, YS) after your release.

You may check your rest history by following these steps:

A screenshot of the iCrew website's 'Display Pilot Schedule' form. The form has a header with the iCrew logo and a navigation bar with tabs: 'Pre-Flight', 'Schedules', 'Bids', 'Bid Packages', 'Bulletins', 'Pay/Hours', 'Personnel', 'NRSA', 'Email', 'Flight Ops', 'Print', and 'Help'. Below the navigation bar is a blue header with the text 'Display Pilot Schedule'. The form contains a text input field for 'Employee # or Category/LOT:' with the value '123456' and a note '(Examples: ATL767B1234 -or-)'. Below this is a 'Select Bid Period:' dropdown menu with the value '01APR14' and a note 'or type it in: (ddmmmyy)'. There is also a yellow highlighted input field for the date.

Start			End		
Date	/	Time	Date	/	Time
15Apr	/	1800	16Apr	/	1215
20Apr	/	1846	21Apr	/	0446
21Apr	/	1200	22Apr	/	0000

A one-day pilot who is going into a hard non-fly day, e.g., golden X-day, vacation day, etc., will be moved to the bottom of the list for conversion to short call on one remaining-on-call day. However, if there are multiple pilots who meet this criteria and additional need for short-call pilots, short call will be assigned in inverse seniority order.

It is important to note that a reserve pilot who is assigned and flies a rotation that releases after 0600 on the day prior to a hard non-fly day, is released from on-call duty at the release of that rotation. The pilot's rest history should reflect that their rest began at that time. If you block-in early on the last flight segment, a reserve pilot should make sure the rest continues to the start of the hard non fly day (early arrival can cause the rest to leave a gap between the end of the rest and start of X-day). Any gap can impact required rest necessary for a rotation award (YS on X days or GS).

Reserve Guarantee for Specially Created Reserve Lines

A pilot who is assigned a specially created reserve line will receive a pro rata portion of the reserve guarantee for each on-call day and X-day on their schedule.

Please see Monthly Bidding Process for a complete discussion of the number of X-days a reserve line will contain and how a pilot's reserve guarantee is determined.

Reserve-Only Trips

A pilot will sometimes see a rotation number in open time that begins with the letter "Y," as in rotation Y003 (see the screenshot below), with a remark added at the bottom of the rotation: "rotation must go to a reserve," or "reserve only." This type of remark indicates that the rotation was moved from another domicile that did not have adequate reserves to cover the rotation to a domicile that does have adequate reserves to fly the rotation.

 END OF OPEN TIME

For example, suppose there is a trip in open time in the SLC base that is being covered by Crew Scheduling more than 18 hours prior to report. As the scheduler goes through the trip coverage process, they follow the trip coverage steps in **Section 23 N**. If they reach step seven (no available pilots in steps one through six), they look for an available reserve pilot in the same position at another base. If they find an available reserve pilot in another base, they add/remove deadhead legs on each end of the trip as needed to have it begin and end at that reserve pilot's base, assign the new rotation a number that begins with the letter "Y," and award it to that pilot as an out-of-base reserve. They may also add the remark "reserve only" to the bottom of the rotation.

The trip coverage process causes these rotations to be temporarily added to the list of open time for the base which has the available reserve, with a rotation number that begins with the letter "Y" must go to a reserve pilot. A regular lineholder in that base may see the trip and wonder why they may not be awarded the flying on a white slip. Regular lineholders in that base had their shot at this trip via step six— "out-of-base regular pilots who have submitted white slips (in seniority order)." Although it may be a good-looking trip, it is actually a SLC trip that is being assigned at step seven and it must go to a reserve pilot.

Frequently Asked Questions about Reserve

The following frequently asked questions are intended to provide a basic summary of life on a reserve line. For further details, please review the entirety of this chapter.

Q1. I am a reserve pilot on a non-fly day and I have an on-call day tomorrow beginning at midnight. What should I expect?

A. The Company can assign you duty reporting as early as 1000 domicile time on your first on call day. If the assignment begins prior to 1800 domicile time, Crew Scheduling must place such an assignment on your schedule no later than 1200 domicile time on your last non-fly day. This applies to both a rotation report and the start of a short call period. You must make yourself aware of any such assignment on your first on-call day no later than midnight domicile time in order to receive at least ten hours prospective rest prior to your earliest possible report. Common methods of determining if you've been assigned are contacting Crew Scheduling or viewing your iCrew Schedule. Crew Scheduling will not contact you to notify you of the assignment.

If you commute to your base by air and are assigned a rotation that reports, or a short call period that begins, in fewer than 18 hours after the end of your last non-fly day, you will not be required to book a backup flight when commuting to that reserve assignment. You are still required to arrive at your base with sufficient time and with adequate rest prior to beginning a rotation or short call.

If there is nothing on your schedule by 1200 domicile time, then you simply begin long call at 0000 domicile time on your first on-call day. Please see Q7 for details on the 18-hour long call "leash."

Q2. I am a reserve pilot on a non-fly day and I have an on call day tomorrow beginning at a time other than midnight. What should I expect?

A. There are certain instances where a non-fly day could end at a time other than midnight (i.e. a partial payback day (PR) or a scheduled rest period of 24 hours or longer). These situations function the same as the more common scenario above, simply with shifted timing. (For more details on PRs, please review *X-days Beginning at other than Midnight* in the Pilot Change Schedule (PCS), Slip Requests and Pay chapter of this SRH.

The Company can assign you duty reporting as early as ten hours after the end of your non-fly day. If the assignment begins between ten and 18 hours from the end of your non-fly day, Crew Scheduling must place the assignment on your schedule no later than 12 hours prior to the end of your last non-fly day. This applies to both a rotation report and the start of a short call period. You must make yourself aware of any such assignment on your first on-call day no later than the end of your last non-fly day in order to receive at least ten hours prospective rest prior to your earliest possible report. Common methods of determining if you've been assigned are contacting Crew Scheduling or viewing your iCrew Schedule. Crew Scheduling will not contact you to notify you of the assignment.

If you commute to your base by air and are assigned a rotation that reports, or a short call period that begins, in fewer than 18 hours after the end of your last non-fly day, you will not be required to book a backup flight when commuting to that reserve assignment. You are still required to arrive at your base with sufficient time and with adequate rest prior to beginning a rotation or short call.

If there is nothing on your schedule 12 hours prior to the end of your last non-fly day, then you simply begin long call at the beginning of your first on-call day. Please see Q7 for details on the 18-hour long call "leash."

Q3. I am a reserve pilot on either a vacation or Company business day and I have an on call day tomorrow beginning at midnight. What should I expect?

A. You do not need to ascertain your schedule. You will simply begin long call at 0000 domicile time. Please see Q7 for details on the 18-hour long call "leash."

Q4. I am a reserve pilot on either a training or training travel day and I have an on call day tomorrow. What should I expect?

A. You do not need to ascertain your schedule. You may not be scheduled to fly nor be on call during any portion of a training day. You will simply begin long call at the latest of the following:

- nine hours after the end of your scheduled debrief (training in domicile)
- nine hours after block-in of your positive space flight as planned by the Training Department (training away from domicile)
- 0000 domicile time

You will not be scheduled to report or begin short call earlier than 18 hours after starting long call status, and Crew Scheduling is required to call to notify you of any such assignment. Please reference *Reserve Obligations During Training* in the Training chapter of this SRH for a detailed explanation, to include examples and see Q7 for details on the 18-hour long call "leash."

Q5. I am a reserve pilot and an SLI. I am scheduled for an extra sim period (XDUT) on an on call day. What should I expect?

A. You do not need to ascertain your schedule. You will be assigned a minimum of nine hours of rest following the extra sim period. If this rest period ends on an on call day, you will simply begin long call at that time. Please see Q7 for details on the 18-hour long call "leash."

Q6. I am a regular pilot today and will be a reserve pilot starting with an on call day in a new

bid period tomorrow. What should I expect?

A. You do not need to ascertain your schedule. You will simply begin long call at 0000 domicile time. Please see Q7 for details on the 18-hour long call “leash.”

Q7. So I’m on long call. Now what?

A. You must be able to report for a trip or begin short call within 18 hours of first attempted contact by Crew Scheduling. You cannot be assigned a rotation that causes you to exceed ALV plus 15:00, or that interrupts an X-day or a golden X-day (except as a yellow or green slip award or an inverse assignment). Once your accumulated credit equals or exceeds your reserve guarantee, you are “FULL” and free from duty for the remainder of the bid period. Please see Reserve “Full” - What Does it Mean? in this chapter of the SRH for further details.

Under no circumstances are you ever required to report in fewer than 18 hours as a long call pilot. Once you have been assigned a trip, you are free from further long call obligations beginning 24 hours prior to report, although an intervening rotation and/or short call can release as late as 18 hours prior to report for your assigned rotation. If you have been converted to short call, you are free from duty beginning 18 hours prior to the start of the short call period.

Q8. Are my FAR 117 lookback and rest requirements any different as a reserve pilot?

A. Under FAR 117, any time spent on long call or short call, or any time during which a pilot is required to be on duty for the Company, is not rest. Of particular relevance to this discussion is the 30-in-168 rest requirement:

Before beginning any reserve availability period (RAP) or FDP, a pilot must have received at least 30 consecutive hours free of duty within the 168 consecutive hours (seven 24-hour periods) immediately preceding the start of the RAP or FDP.

Rest must be prospectively known and assigned, which means the pilot must be notified of both the start time and duration of a scheduled rest period before the rest period begins. After a pilot begins an assigned rest period, the Company cannot extend the current rest period by notification for any reason. However, a new assigned rest period could be started with notification. It’s entirely legal for you to be a long call pilot for greater than seven consecutive days; however, you cannot legally begin a RAP or report for an FDP without first receiving 30 hours of rest.

Please review *FAR Reserve Rest Requirements* in the *Flight and Duty Limits and Rest Requirements* chapter of this SRH for more details.

Q9. Can I be assigned a transition rotation if I am in a new category or a regular line pilot in the following bid period?

A. Yes, but you must request the rotation and it is by proffer only. Please see the earlier discussion on Reserve Spillover Preferences in this chapter of the SRH.

Q10. What if I am assigned short call?

A. Upon notification of short call, you may advise Crew Scheduling that you will be unavailable for contact during the first two hours of your short call period. Should you exercise this option, you must then check your schedule within that two-hour period and acknowledge any rotation that has been placed on your line. Such rotation may require a report as early as two hours after the start of your short call period.

Note: A pilot who has positioned themselves to be available at the appropriate airport in a co-terminal domicile (LAX or EWR, LGA, or JFK) and who is assigned flying out of a different co-terminal airport should so inform Crew Scheduling. This pilot will be afforded additional time to reposition themselves as necessary. See the **Note** in Q10 below.

Q11. How does short call work?

A. Short call cannot exceed 12 hours, although Crew Scheduling often assigns short call periods less than 12 hours in length. They must attempt to contact you to assign you a trip and you must

be promptly available to report for such a trip. No trip assignment may cause you to exceed the ALV plus 15:00.

Q12. What does “promptly available” mean?

A. A pilot on short call is required to be within the general area of their base and promptly available for contact by Crew Scheduling and must be able to promptly report for an awarded/assigned rotation. Since each base has its own particular traffic problems, the phrase “promptly report” has never been defined in terms of time or distance and is based upon normal circumstances that can be expected throughout the day or night. Actual realistic response time may vary from base to base and with weather and time of day. It is not possible for a pilot to anticipate and account for abnormal conditions beyond their control, which may extend response time beyond that normally required.

For example, a NYC pilot encountering a snowstorm or an LAX pilot caught in rush-hour traffic might each require more time than normal to sign in.

***Note:** For NYC-based pilots, short call availability may be measured from the co-terminal (EWR, LGA, JFK) of the pilot’s choice, without regard to the actual co-terminal to which they may be required to report. An NYC reserve pilot on short call who is assigned a rotation reporting in EWR will be reimbursed for up to \$100 of actual transportation expenses to EWR. For LAX-based pilots, short call availability is measured from LAX.*

If a pilot anticipates an unusual response time, they should inform Crew Scheduling for their planning purposes. Any discussion of “reasonable” should occur only between the pilot, the Chief Pilot, and possibly an ALPA representative.

Occasionally Short Call assignments may report very shortly after the short call begins. As long as the report is at or after short call start, it is a legal assignment. A short call pilot must be “promptly available,” which is an undefined term. If Crew Scheduling places a rotation on your schedule with limited time to report, you should provide your best guess as to your arrival time ***under normal driving conditions***. With extremely short report situations, the Company has made a business decision and understands you may not be able to report by the Company’s posted time. You are not expected to drive excessively fast, for example, simply to make the Company’s posted report time. Communication with Crew Scheduling is critical in situations such as these but take as much time as necessary to report safely for your assigned rotation.

Q13. How often can I be assigned short call?

A. At most six times per bid period (prorated for vacation, training, or absences other than PD/APD days that are known at 2200E two days before the start of the bid period). You may be converted to additional short call periods if you are needed for Short Call and have submitted a Yellow Slip for the additional short call periods. If this occurs, your reserve guarantee will increase by 1:00, and you will receive 2:00 pay, no credit (above your reserve guarantee), for each additional short call period awarded.

If you call in sick before the end of your Short Call period, you will not receive a Short Call credit for that period.

Q14. What happens when I finish short call?

A. You simply revert back to long call status immediately. There is no automatic or required rest period following short call. If you were not used during your short call period, you will receive 1:00 pay, no credit (above your guarantee).

Q15. What are my obligations when I finish a trip on reserve on an on-call day? What should I expect?

A. You must check your schedule within 30 minutes after block-in, i.e., prior to release, and acknowledge any duty that will follow your break-in-duty or any rest which begins after your release. You cannot be assigned to report for a rotation, or begin short call, earlier than 18 hours

following your release. If there is nothing on your schedule, you simply resume the 18-hour long call leash.

The only two acceptable means by which to check your schedule are:

- iCrew, and
- Calling Crew Scheduling

MiCrew, iCrew Mobile, etc., are NOT to be used for this required schedule check.

Please reference *Required Pre-release Schedule Check* in the Reserve chapter of this SRH for more information on this requirement.

Q16. What are my obligations when I finish a trip on reserve on an underlying X-day, golden X-day, or PB/PR day with less than 24 hours before my next on-call day? What should I expect?

A. You must check your schedule within 30 minutes after block-in, i.e., prior to release, and acknowledge any duty that will follow your break-in-duty or any rest which begins after your release. You cannot be assigned to report for a rotation, or begin short call, earlier than 18 hours following the start of your first on-call day. If there is nothing on your schedule, you simply resume the 18-hour long call leash.

The only two acceptable means by which to check your schedule are:

- iCrew, and
- Calling Crew Scheduling

MiCrew, iCrew Mobile, etc., are NOT to be used for this required schedule check.

Please reference *Required Pre-release Schedule Check* in the Reserve chapter of this SRH for more information on this requirement.

Q17. Can I be sent back out or rerouted via this required schedule check?

A. No. Although as a reserve you may be rerouted into tag-on flying, you may not be informed of such a reroute via this required schedule check. You must be informed of any reroute in one of the time-honored methods, prior to block-in with no further expectation to fly: via ACARS, radio message from ramp to call scheduling, etc.

Q18. What if my rotation ended with a deadhead, and I deviated from that deadhead?

A. In that case, you must check your schedule within 30 minutes after the *scheduled arrival of your original deadhead*.

Q19. When am I released on my last on-call day?

A. With Crew Scheduling concurrence, a reserve pilot who has not been assigned to fly may be released at 0600 domicile time prior to a soft non-fly day, e.g., X-day or regular day off. A reserve pilot who has not been assigned to fly will automatically be released at 0600 domicile time prior to a hard non-fly day, e.g., golden X-day, MLOA, PD, APD or vacation.

Q20. How does Crew Scheduling decide which Long Call pilot is awarded a trip?

A. Available pilots are displayed to the scheduler in the following order: Grouped by days of availability, then RAW value grouping, then inverse seniority (in seniority order for yellow slip requests). The scheduler then awards trips in order taking the pilots' trip preferences, including specific trip requests, into account.

Q21. What is a Yellow Slip, and is this different than an "Only if Needed" qualifier?

A. A Yellow Slip is used when a reserve pilot wants to volunteer to be considered by Crew Scheduling when awarding Open Time rotations, when converting to short call, and to be considered for additional on-call days. An "Only if Needed" preference does not increase the pilot's chances of being assigned a rotation or a short call; rather, the pilot's preferences will be used only if Crew Scheduling determines via the trip coverage report that they are needed to fly.

“Only if Needed” preferences and YS will be used in seniority order to determine which rotations are assigned to the identified pilots, then inverse seniority order for any remaining rotations.

The process is as follows:

1. At the time the trip coverage report is created, Crew Scheduling is required to first determine how many pilots are needed PRIOR to starting assignments.
2. Once the scheduler determines how many pilots are needed to cover the number of rotations on the trip coverage report, the scheduler will look to see if any submitted an “Only if Needed” qualifier. If one of those pilots submitted an “Only if Needed” qualifier, the preference is treated identically to a YS and the pilot’s qualifiers and quantifiers will be considered in seniority order.
3. Crew Scheduling will then assign rotations from the current trip coverage report as described under **Section 23 S. 1. a.** of the PWA.

Please review *Reserve Qualifiers If Needed to Fly* in this chapter of the SRH for a detailed explanation, to include examples.

Additionally, when Crew Scheduling determines how many short call pilots are needed each day, it does so by creating a list that identifies eligible short call pilots. Just like an “Only if Needed” preference qualifier for flying, the short call “Only if Needed” preference qualifier will not increase your chances of being assigned a short call. A pilot will only be assigned short call if they would have been assigned short call without the preference. At no time will an “Only if Needed” preference qualifier make a senior pilot fly or be assigned short call before a junior pilot, unless that senior pilot has submitted a YS for such assignment.

Q22. How does Crew Scheduling decide which Long Call pilot will be assigned Short Call?

A. The scheduler decides how many Short Call periods they will need for the next day by 0800E and what time coverage is needed. The remaining unassigned pilots are placed in the following order:

- Grouped by days of availability, then
- Number of Short Call credits, then
- Inverse seniority (in seniority order for yellow slip requests)

The Short Call periods are then awarded in order, taking the pilots’ preferences, including specific short call requests, into account.

A one-day pilot who is going into a hard, non-fly day (e.g., golden X-day, vacation day, etc.) may be bypassed at the scheduler’s discretion.

A pilot in a widebody category that operates FRMS rotations may be assigned Short Call on the first on-call day following a block of days off by being notified no later than 1200 domicile time on the last on-call day prior to the beginning of their block of days off. They will be released at the time of notification and will be free from duty until the start of the Short Call period. If they are not assigned rest prior to this time, they will not be assigned prospective rest or any assignments until their first on-call day.

Q23. Can I move my X-days after my schedule is released in iCrew?

A. Yes, you can. Please see *X-Day Move Rules* in the PCS chapter of this [SRH](#).

Q24. I’m scheduled to begin training or travel to training while I’m a reserve pilot. Do I have an on-call obligation prior to report for training or training travel?

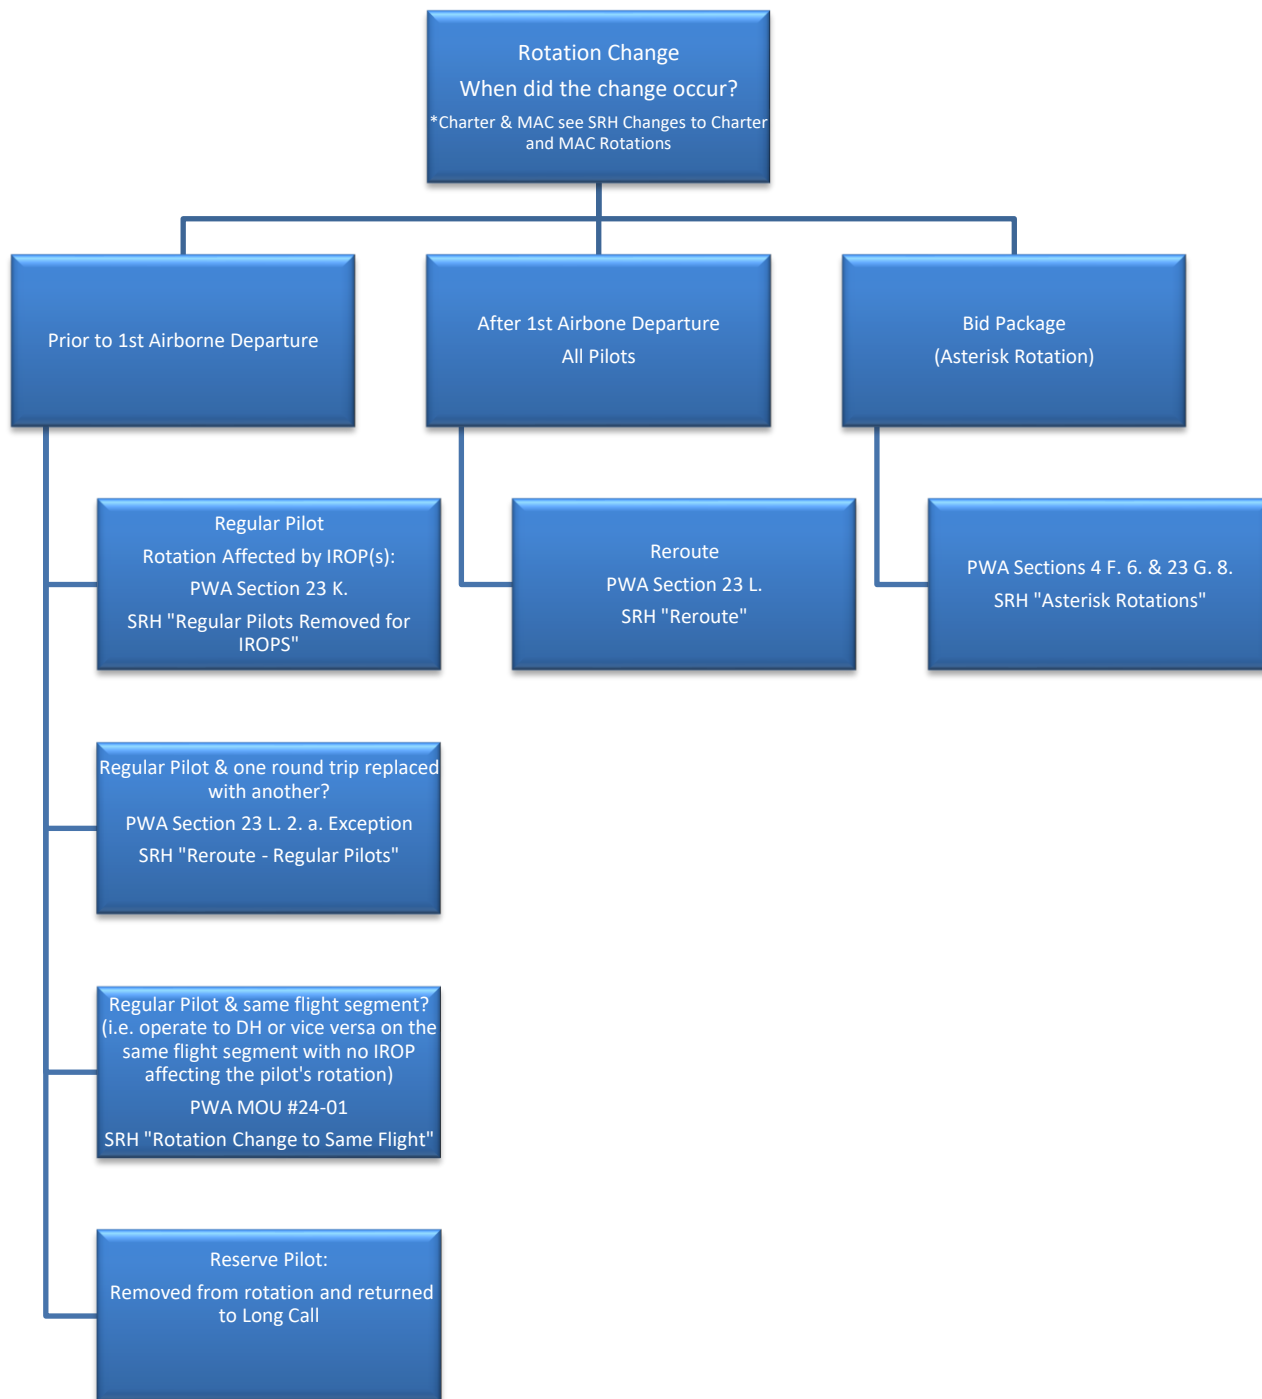

A. No. You may not be scheduled to fly or be on call on a day of training or a training travel day. Please reference the Training chapter of this SRH for more information.

General (23 K. & L.)

If your rotation has been changed, the following flowchart may be useful to you in determining the contractual provisions that apply to this change and where they are outlined in the SRH.

By definition, a reroute is an alteration of a pilot's rotation that occurs, and of which the pilot is notified, after the airborne departure of the first flight of the rotation, with one exception: should a pilot's rotation begin with a roundtrip contained within a single FDP that is delayed, they may be rerouted into a different round trip, so long as they are returned to the remainder of their rotation immediately thereafter.

When a reserve pilot is removed from their rotation prior to report, they will be returned to normal reserve on call status.

When a reserve pilot's rotation is canceled after report and before the airborne departure of the first segment, they may be given other flying as long as the new flying is within **Section 12** duty time limits. If they have not been given other flying, they should contact Crew Scheduling to coordinate a release. Once released, they will be returned to the normal reserve on call status after receiving the required break in duty (nine hours).

When Crew Tracking reroutes a pilot, they will use:

- Actual block times for completed flights.
- Flight plan block and taxi times for a flight currently in progress.
- Published times for the city pair, if available, for flights yet to be flown.
- Reasonable flight, taxi, and turn times for flights yet to be flown.

A reroute must comply with all applicable FAR and PWA limits at the time the rerouted duty period(s) is built and also at the time the pilot is notified of the reroute. You cannot be re-routed into an extension. Informing the pilot of a reroute after it is already obvious that the new schedule will exceed the FARs with the explanation, "It was legal when we built it," does not satisfy the FAR requirement for joint responsibility.

Crew Tracking will send a complete revised rotation via ACARS to an in-flight crew when such rotation is created. The crew will be expected to acknowledge this message promptly, workload permitting. Otherwise, a crewmember must acknowledge the message or contact Crew Tracking after arrival at the gate. A crew that is unable to accept a reroute due to an FAR or PWA conflict must contact Crew Tracking and so advise.

Each pilot has the responsibility to judge their own fitness for duty to determine whether they are able to accept a reroute.

Note: Crew Tracking is UNAWARE of a pilot's future schedule when they construct reroutes. If a reroute conflicts with your vacation or other hard non-fly day (MLOA, Golden X-day, JURY, PD, APD etc.), you must contact Crew Scheduling, who will make every reasonable effort to resolve such a conflict.

Regular Pilots Removed for IROPS (23 K.)

When a regular pilot is removed from a rotation due to IROPS affecting their rotation and they are notified before the airborne departure of the first flight segment, **Section 23 K.** recovery rules apply.

Exception: A pilot who is removed from a rotation will have no recovery obligation under **Section 23 K. 1.** if they are removed due to cancellation or equipment substitution that occurs prior to either:

- the close of line bidding for the bid period in which the rotation is scheduled, or
- the addition of the rotation to the pilot's line.

A pilot may submit a recovery slip (RS) under **Section 23 J.** in an attempt to satisfy their **Section 23 K.** recovery obligation. If no RS is awarded, the Company may assign recovery flying under **Section 23 K.** If there are two pilots with the exact same recovery window, Crew Scheduling will assign recovery rotations based on inverse seniority order. If a pilot is subsequently removed from an assigned recovery rotation, they can only be assigned a second recovery rotation under limited circumstances (see below for explanation).

1. If a pilot is removed from the first leg of a rotation, they must remain available for recovery flying as follows:
 - a. If they are notified of the removal before reporting for the original rotation but have not been assigned any recovery flying:
 - 1) They are essentially on short call for six hours beginning at the originally scheduled report time, unless assigned a rotation or released by Crew Scheduling. They have no obligation to remain available for contact prior to that time. The time beginning at report and ending with the assignment of an FDP is considered a RAP for purposes of determining the maximum duty period.
 - 2) They can be assigned flying that reports on any day of the original rotation but not earlier than their originally scheduled report and releases no later than four hours after their originally scheduled release. A pilot may be assigned recovery flying scheduled to release no later than four hours after their originally scheduled release, or the same calendar day, whichever is later, provided the last duty period of the recovery flying is a transoceanic duty period.
 - 3) Recovery flying must be assigned (notification) no later than six hours after the originally scheduled report time.
 - b. If they are notified of the removal after reporting for the original rotation,
 - 1) They must remain immediately available for a period of up to six hours after the originally scheduled report time and be prepared to depart immediately on recovery flying unless released. The FDP will begin at sign in.
 - 2) They can be assigned flying that reports on any day of the original rotation, and that releases no more than four hours after the originally scheduled release. A pilot may be assigned recovery flying scheduled to release no more than four hours after the originally scheduled release, or the same calendar day, whichever is later, provided the last duty period of the recovery flying is a transoceanic duty period.
 - 3) If they are assigned recovery flying that:
 - a) reports at least five hours after notification and in the same duty period, or
 - b) reports after a break in duty and in the same calendar day, they are entitled to a hotel room.
 - 4) Recovery flying must be assigned no later than six hours after the originally scheduled report time.
2. If they are removed from a leg other than the first:
 - a. At their base, they may only be assigned to deadhead to and/or fly the balance of their original rotation.
 - 1) This may occur before or after a break in duty at their base.
 - 2) They are entitled to a hotel room if they receive a break in duty at their base.
 - b. Away from their base, they may be assigned recovery flying that is scheduled to release no later than four hours after their originally scheduled release.

A pilot may be released from **Section 23 K.** recovery obligation if they waive their rotation guarantee and Crew Scheduling agrees.

Severe IROPS and Double Recovery (23 K. 1. d. Note two)

If a pilot's original rotation or their recovery rotation is scheduled to operate at an airport with an IROP so severe that Delta has publicly announced a waiver of passenger change fees due to the disruption, and they are removed from their recovery rotation, then they may be assigned a second recovery rotation. This second recovery assignment will be limited by the same constraints as any other recovery assignment as outlined above.

A pilot who has been assigned a second recovery rotation under the rules above will be paid as follows:

- If their original rotation was awarded via a WS, swap with the pot, or from the Swap Board:
 - o Single pay and credit for the greater of the pilot's original rotation or the rotation flown, plus
 - o Single pay, no credit for the rotation flown
- If their original rotation was awarded via a GS or IA:
 - o Single pay and credit for the pilot's original rotation, plus
 - o Double pay, no credit for the rotation flown
- If their original rotation was awarded via a GSWC or IAWC:
 - o Single pay and credit for the rotation from which the pilot was removed pursuant to their GSWC or IAWC, plus
 - o Single pay and credit for the rotation from which the pilot was removed under **Section 23 K.**, plus
 - o Double pay, no credit for the rotation flown

Section 23 K. Recovery Obligation after JWT (23 BB.)

If a pilot who has participated in a JWT is removed from that rotation due to an IROP affecting the rotation, that pilot is subject to recovery flying under **Section 23 K.** for any flying from which they were removed *other than flying that was added as part of the JWT*. If the only flying from which the pilot is removed was added via the JWT, the pilot may only be deadheaded to rejoin their original rotation. Otherwise, recovery assigned to the pilot must comply with the provisions of that section. In all cases, the pilot will retain rotation guarantee of the full value of their rotation prior to the removal.

The recovery assignment must be scheduled to report no earlier than the pilot's original report. If the pilot has added flying to, or dropped flying from, the beginning of their rotation via a JWT such that it reports in other than the pilot's base, the Company will deadhead the pilot to their base as needed to perform any assigned recovery flying or the remainder of their rotation. Such deadhead will be scheduled to depart no earlier than the pilot was scheduled to depart prior to the removal.

Any recovery assignment must be scheduled to release in the pilot's base no later than four hours after the pilot's original release (or the end of that calendar day, whichever is later, if the last duty period of the recovery flying is a transoceanic duty period). The entire recovery rotation will be subject to the soft pay provisions of **Section 12 L.**

If the pilot has added flying to the end of their rotation via a JWT and that added flying is subsequently cancelled, the pilot's rotation simply ends in their base. If the pilot's rotation had a turn from their base to an out location and back, the pilot gave away the return leg as a JWT, and the departure out of their base subsequently cancels, the rotation will also then simply end in the pilot's base. In each case, the pilot will retain rotation guarantee of the full value of their rotation prior to the removal, and no deadhead will be added to return the pilot to the location the rotation was to terminate after the JWT.

EXAMPLE ONE

Assume a pilot has accepted a JWT for the one-leg rotation shown on the right. If the pilot is removed from this rotation due to an IROP affecting that rotation, they will have no recovery obligation because the rotation consists solely of flying that was added as part of the JWT.

Now assume the pilot added that single flight 2272 SFO - LAX to their existing rotation, as shown on the left. (The pilot's original rotation is shown in blue and the flight that was added in the JWT is orange.)

Note that due to ADG, the pilot's original rotation had a value of 15:45 plus Holiday Pay of 10:30 pay, no credit. To this is now added 1:31 for the additional flight 2272. However, the pilot does NOT receive Sit Pay for the 2:18 turn time created on A Day by the JWT.

If flight 2272 (the leg the pilot added via the JWT) cancels, the pilot will be deadheaded to rejoin their rotation at the earliest possible time, but no earlier than 1331 (the scheduled departure time of flight 2272). If other flights on the pilot's rotation cancel, i.e., flights from the pilot's original

rotation, normal *Section 23 K*. recovery rules will apply. In all cases, the pilot will be pay protected for all cancelled flying. If no recovery flying is assigned at the time of the pilot's removal from the rotation, Crew Scheduling must assign any recovery flying no later than six hours after the pilot's original report, in this case 1831 pilot base time. During that period, the pilot will be required to remain promptly available for contact by Crew Scheduling in the general area of the airport at which they were scheduled to report prior to their removal, in this case SFO.

Section 23 K. Recovery Checklist

This "checklist" can be used to quickly determine the likelihood that a given recovery assignment

is in compliance with the PWA.

1. Has there been an IROPS **affecting your rotation**, e.g., cancellation, equipment substitution, misconnect, etc., on one or more of **your flights (other than flights that were added to your rotation via a JWT)**?
 - If yes, recovery obligation applies
 - If no, there is no recovery obligation
2. Did this IROPS occur after you were awarded/assigned the rotation, but before the first leg's airborne departure?
 - If yes, recovery obligation applies
 - If no:
 - If the IROPS occurred before being awarded/assigned the rotation, you should be removed from the entire rotation with full pay and no recovery obligation
 - If the IROPS occurred after airborne departure of the first leg, **Section 23 L.** reroute rules apply.
3. If you have acknowledged removal from your original rotation but have not acknowledged, or have not been assigned, recovery flying before your original report, you must be promptly available (equivalent to short call for up to six hours for assignment to recovery flying beginning at your original report time
4. If you have not acknowledged removal from your original rotation before your original report, you must report as scheduled and be immediately available for assignment to recovery flying for up to six hours
5. If you were removed from the first leg of your original rotation, your recovery assignment must:
 - Be assigned no later than six hours after your original report
 - Be scheduled to report no earlier than your original rotation
 - Be scheduled to release no later than four hours after your original rotation (or same calendar day, whichever is later, if the last duty period contains an ocean crossing)
 - Exception: Recovery flying awarded as a **Section 23 J.** recovery slip is not required to operate over your original rotation's footprint
6. If you were removed from a leg other than the first leg at an airport other than your base, then you can be assigned any recovery flying provided it is scheduled to release no later than four hours after your original rotation
7. If you were removed from a leg other than the first leg at your base, you may **only** be assigned to deadhead to and/or fly the remainder of your original rotation.
NOTE: A domicile layover may be legal in this instance if it is necessary to return you to the remaining portion of your original rotation.
8. Suppose your recovery assignment/award is subsequently affected by another IROPS. In that case, you may not be assigned additional recovery flying unless Delta has publicly announced a waiver of passenger change fees due to IROPS at one of the airports in your original or recovery rotation; this means that:
 - Legs may always be removed from your recovery rotation
 - No **operating** legs may be added to your recovery rotation
 - Deadhead legs may be added to return you to your recovery rotation or back to base
9. If you are based in NYC or LAX, your recovery assignment must begin and end at the co-terminal airport for which you were initially scheduled; a surface DH from one co-terminal airport to another to start or end your recovery flying is not allowed.

Recovery Slips (23 J.)

For a complete explanation of how to enter a Recovery Slip, see the iCrew User's Guide in the ALPA folder of AeroDocs on your EFB.

Under **Section 23 J.**, if a regular pilot has been removed from a rotation due to irregular operations (IROPS) and is subject to recovery flying under **Section 23 K.**, they may submit a recovery slip (RS) to be awarded open time to satisfy their recovery obligation. RS awards are in seniority order if two or more pilots are using a RS for the same rotation. RS slips are the first step of coverage prior to WS's.

This awarded open time must be a single rotation with a value of at least 50 percent of the value of the pilot's original rotation and may be scheduled to operate on any available days in the current or subsequent bid period, including the days of the original rotation. A pilot who is awarded an RS rotation will be paid and credited the greater of the value of the rotation from which they were removed or the RS rotation. A pilot may also indicate their recovery flying preferences to be used by the Company when assigning recovery flying under **Section 23 K**.

An RS for beyond-next-day flying (and next-day flying at the pilot's request) will be processed in each automated PCS run (only the 0700 PCS run for next-day flying) and will have the same notification and acknowledgement requirements as any other beyond-next-day transaction. An RS for same/next/second-day flying will be awarded by Crew Scheduling and will have the same notification and acknowledgement requirements as any other same/next/second-day transaction. In both cases, RS requests will be processed prior to WS requests.

A pilot who has been removed from a rotation and is subject to recovery obligation has no requirement to submit an RS. If they do not, recovery flying may be assigned earlier under **Section 23 K**:

- A pilot who has not submitted an RS may be assigned recovery flying under **Section 23 K. 1** after the earlier of:
 - a. 24 hours after first attempted notification of their removal from their originally scheduled rotation, or
 - b. 0700E two days prior to the day of their originally scheduled report.
- A pilot who has submitted an RS may not be assigned recovery flying under **Section 23 K. 1** until:
 - a. 0700E two days prior to the day of their originally scheduled report, if the RS has been processed by at least one PCS run, or
 - b. 0700E one day prior to the day of their originally scheduled report.

An RS will not be awarded if:

- The pilot was not removed from their entire original rotation
- The value of the RS requested rotation is less than 50 percent of the value of the original rotation
- The RS requested rotation is not in the current or next bid period
- The pilot will not be in the category of the rotation on the day it originates
- The value of the RS requested rotation is greater than the value of the original rotation and would cause the pilot's projection to exceed the ALV plus 15 hours
- The RS requested rotation would cause the pilot to exceed their block hour limit
- The RS requested rotation would cause the pairing of two low-time pilots
- The pilot has not completed OE
- The RS requested rotation creates a conflict with another rotation and/or is within 30 minutes of creating an FAR and/or PWA conflict
- The RS requested rotation conflicts with an APD or conflicts with a reserve day on which PD appears on their schedule
- The RS requested rotation does not conform to the stipulations of the RS request
- The RS requested rotation is scheduled to operate during a period of their absence due to sick leave

Example: Assume a pilot is removed from rotation 1234, a domestic 4-day trip that reports at 1200 on August 15, releases at 1200 on August 18, and is worth 22:00. Assume further that the following rotations are in open time, and that the pilot is not scheduled to fly on any of the days of this open time:

Rotation 2345—reports at 0900 August 5, releases at 2100 August 6 worth 10:30
Rotation 3456—reports at 0900 August 15, releases at 2100 August 16 worth 11:30
Rotation 4567—reports at 0900 August 16, releases at 2100 August 17 worth 10:30
Rotation 5678—reports at 0900 August 16, releases at 2100 August 18 worth 15:30
Rotation 6789—reports at 0900 August 31, releases at 2100 September 6 worth 42:30

The pilot may be awarded an RS for rotations, 3456, 5678, or 6789 since all three operate on days off (including the days of rotation 1234, their original rotation) and all three are worth at least 50 percent of rotation 1234. Because rotation 6789 is worth more than rotation 1234, adding this rotation to their line cannot cause their projection to exceed the WS pickup limit for their category in the August bid period, and they will not be awarded 6789 if their projection is already above the WS pickup limit. They may not be awarded an RS for rotations 2345 or 4567 because each is worth less than 50 percent of rotation 1234, their original rotation.

The pilot may be assigned rotations 4567 or 5678 as recovery flying under **Section 23 K.** because each rotation reports at or after their originally scheduled report and releases within four hours of their originally scheduled release. They may not be assigned any of the other rotations as recovery flying under **Section 23 K.** because each reports and/or releases outside the required timeframe.

Provided the first attempt to notify the pilot of their removal occurs prior to 0700E on August 12, they will have at least 24 hours to submit an RS, if they so desire, before the Company may assign them recovery flying under **Section 23 K.** If the first attempt to notify the pilot of their removal occurs after 0700E on August 12, then the Company may assign them recovery flying under **Section 23 K.** as early as 0700E on August 13 if they have not submitted an RS.

If they submit an RS prior to being assigned recovery flying, then they may be assigned recovery flying under **Section 23 K.** after 0700E on August 13, provided their RS has been processed in at least one PCS run, and after 0700E on August 14 in any case.

If the pilot is not awarded an RS by the time that they may be assigned recovery flying under **Section 23 K.**, their RS request (if any) will be used as their Recovery Flying Preference Qualifiers to determine which rotation they will be assigned as recovery flying, in the same way that such qualifiers have been used in the past.

Recovery Flying PCS Preferences

For a complete explanation of how to enter Recovery Flying Preferences, see the iCrew User's Guide in the ALPA folder of AeroDocs on your EFB.

We highly recommend that a pilot always indicate their recovery flying preferences in the PCS Standing Request Qualifiers template in iCrew. When applicable, these preferences will be used by the Company in the event a pilot is assigned recovery flying under **Section 23 K.** If a **Section 23 J.** recovery slip is not awarded, then PCS preferences in iCrew will be the only way to potentially affect a possible **Section 23 K.** recovery flying assignment.

Swapping of Recovery Assignments

A pilot who is removed from a rotation due to irregular operations (IROPS) under **Section 23 K.** may incur contractual recovery obligations to the Company. The pilot may request to be released from any recovery obligations if they are willing to forfeit their rotation guarantee. Such a request will be approved if the reserve levels are at least 50 percent of the required reserves on the first day of the original rotation and the request is made at least 24 hours prior to the originally scheduled report time.

If the pilot has not been released from their recovery obligations, the Company may assign recovery flying in accordance with the restrictions in **Section 23 K.** The pilot flies the recovery flying but retains the rotation guarantee of the original trip. The pilot will receive the greater of the rotation guarantee or the value of the recovery flying.

Pilots retain the contractual right to swap or drop any assigned recovery flying using normal PCS transactions. However, swapping out of recovery flying or dropping recovery flying will result in the loss of rotation guarantee for the original trip. If a pilot swaps or drops their recovery flying, they are considered to have voluntarily forfeited their rotation guarantee.

Late Rotation Release

A pilot who is removed from all or a portion of their rotation due solely to a lack of legal rest following a delayed release from their previous rotation may only be assigned to deadhead to and/or fly any portion of their original rotation. Because such an assignment involves notification and acknowledgement on the part of the pilot, the mechanics of this can be greatly affected by the amount of rest you require after your delayed release.

When your rotation is affected by delays and/or reroutes that will cause you not to be legal to report as scheduled for your subsequent rotation, Crew Scheduling receives an alert to this fact. The scheduler will then set about determining how much of the subsequent rotation you will be legal to fly and make the appropriate adjustments.

This could include deadheading you to rejoin the remaining portion of your original rotation away from base but may not include additional new flight segments. It could also include rejoining your next rotation prior to receiving a break in duty first, under **Section 12 G. 2. Note three**.

Notification of any such change can come in several ways:

- Via ACARS while you are on your prior rotation, in which case you would be required to respond prior to leaving the cockpit at the end of the flight
- Via Company personnel, e.g., a gate agent, in which case you would be considered to have been notified
- Via telephone call from Crew Scheduling, to which you may or may not be required to respond

Examples

Consider the schedule below:

Date	2	3	4	5	6	7
Pilot's Schedule	3305	3305	3305	3306	3306	3306
Scheduled Report Times	0700			0700		
Scheduled Release Times			1400			1400

Example 1

Assume that delays cause the pilot to be released from rotation 3305 at 2200. This would cause them to have fewer than ten hours prior to reporting for rotation 3306. This IROP (application of the FARs) would cause them to be removed from rotation 3306 beginning with the first flight segment and subject them to recovery obligation, which can only be to deadhead to and/or rejoin their original rotation at some point.

If Crew Scheduling elects to notify the pilot of the point at which they will rejoin their rotation via ACARS or a Company representative at their arrival gate, the pilot will be required to respond.

If Crew Scheduling elects to make the notification by telephone, the pilot has no obligation to respond immediately. Rather, they can choose simply to enter rest, knowing that they are not legal to report at 0700. They may instead make themselves promptly available for contact from Crew Scheduling beginning at 0800, ten hours after their release from rotation 3305, as shown below. Crew Scheduling would now have until 1300 (six hours after the pilot's original report) to notify them of their assignment to recovery flying. Note that the period during which the pilot must be promptly available has been shortened to only five hours.

Date	2	3	4	5	6	7
Pilot's Schedule	3305	3305	3305	3306	3306	3306
Scheduled Report Times	0700			0700		
Scheduled Release Times			1400			1400
Delayed Release Time			2200			

Earliest Availability for Contact				0800		
-----------------------------------	--	--	--	------	--	--

Example 2

Assume now that the pilot is delayed or rerouted into an additional day on rotation 3305, releasing now at 0300 on D-day - again leaving them with insufficient rest prior to their next rotation. This IROP (application of the FARs) would also cause them to be removed from rotation 3306 beginning with the first flight segment and subject them to recovery obligation.

If Crew Scheduling elects to notify the pilot of the point at which they will rejoin their rotation via ACARS or a Company representative at their arrival gate, the pilot will be required to respond. If Crew Scheduling elects to make the notification by telephone, the pilot has no obligation to respond immediately. Rather, they can choose simply to enter rest, knowing that they are not legal to report at 0700.

In this case, however, the pilot's ten hours minimum required rest would not end until more than six hours after their original report from rotation 3306, at which point they can no longer be notified of their assignment to recovery flying. As such, Crew Scheduling will have no opportunity to notify them unless the pilot voluntarily checks their schedule or responds to a CNO notification during their rest period. The pilot always retains the option to contact Crew Scheduling themselves prior to release to determine how the conflict will be resolved.

Date	2	3	4	5	6	7
Pilot's Schedule	3305	3305	3305	3306	3306	3306
Scheduled Report Times	0700			0700		
Scheduled Release Times			1400			1400
New Release Time				0300		
Earliest Availability for Contact				None		

Summary

- If you are removed from all or a portion of your rotation due solely to a lack of legal rest following a delayed release from your previous rotation, you may only be assigned to deadhead to and/or fly any portion of your original rotation
- You may be assigned to rejoin your original rotation either before or after receiving a break in duty under **Section 12 G. 2.**
- If you are informed of the change to your second rotation via ACARS while you are on your prior rotation or via Company personnel, e.g., a gate agent, you are considered to have been notified and must report as scheduled
- If you are informed via a telephone call from Crew Scheduling, you are not required to respond until your required rest has ended, and then only until six hours after your second rotation's original report
- You always retain the option to contact Crew Scheduling yourself prior to release to determine how the conflict will be resolved

Rotation Guarantee on Recovery Award/Assignment

When the Company assigns a regular pilot recovery flying under *PWA Section 23 K.* or awarded recovery flying under *Section 23 J.*, the recovery flying carries a rotation guarantee.

- This guarantee is the value of the original NOOP rotation.
- Delta will pay the greater of either that rotation guarantee or the flying they perform.

If the pilot opts to drop or swap out of the recovery rotation, the Company will reduce their projection by the greater of their rotation guarantee or the recovery award/assignment value.

Under **Section 4 F. 4.** of the PWA, when a pilot flies a recovery rotation, the Company credits the rotation guarantee for their original NOOP rotation on the completion date of the recovery

rotation flown. This crediting practice can cause some of that pay to shift from one bid period to another in certain circumstances.

A **Section 23 K.** recovery assignment will always fall within the footprint of the pilot's original NOOP rotation. Therefore, the pilot's rotation guarantee will remain in the same bid period unless the pilot's original NOOP rotation was a transition trip. In that event, their pay and credit will be computed and applied:

- At the scheduled dates of the original NOOP rotation, if the value of the recovery flying is less than the value of the original NOOP rotation, and
- At the completion date of the recovery flying, if the value of the recovery flying is more than the value of the original NOOP rotation.

However, a pilot may request and be awarded a recovery rotation under **Section 23 J.** that does not fall within the original NOOP rotation footprint. The recovery slip award could even be in a different bid period.

For example, suppose the Company removes a pilot from their rotation 3305/02MAR (worth 24:00) under **Section 23 K.** and suppose they are awarded rotation 0125/26FEB (worth 12:00) on their **Section 23 J.** recovery slip.

	25FEB	26FEB	27FEB	28FEB	01MAR	02MAR	03MAR	04MAR	05MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						

Delta will move the pilot's rotation guarantee (the value of rotation 3305) from the pilot's March time card to their February time card.

The ability to be awarded a recovery slip in the current, previous, or subsequent bid period as the original rotation provides a great deal of flexibility. However, pilots must be aware of the possible consequences to the timing of their pay. For example, were this to cause the pilot's pay for the IROP rotation to shift into the subsequent month, they may or may not have sufficient time in the current month to recoup that pay.

Sick Leave on Recovery Award/Assignment

When pilots call in sick from their recovery award/assignments, the Company pays them and debits their sick leave bank by the value of their original NOOP rotation guarantee.

Note: If the pilot's recovery rotation was worth more than the original NOOP rotation, the pilot's pay would fall to the value of the original NOOP rotation guarantee.

What if a pilot then calls in well before the end of the recovery rotation and chooses to pick up flying that overlaps with that recovery rotation? In this case, the pilot's new rotation will be treated as sick leave flyback and paid per **Section 14 E. 2. b.**

It makes no difference whether or not the new rotation overlaps the pilot's original NOOP rotation.

Scenario #1

Suppose the Company removes a pilot from their rotation 3305/11MAR (worth 36:00) under **Section 23 K.** and assigns the rotation 0125/12MAR (worth 10:30) as recovery. This recovery rotation 0125 now carries a rotation guarantee of 36:00 (the value of the original NOOP rotation).

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						

Now assume this pilot now calls in sick for rotation 0125. As this rotation has the full value of their original NOOP rotation 3305, Delta will debit the pilot's sick bank for 36:00.

What if the pilot calls in well for B day and is awarded a WS for rotation 3301/13MAR (worth 12:00)?

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						
		Sick	Well						
			3301	3301					

Because 3301 overlaps the sick rotation 0125, it is considered sick leave fly back. The amount of fly back for which the pilot is eligible is the difference between the value of rotation 0125 (36:00) and the value of the portion of the rotation on which they were sick - A Day in this example. Assuming that the value of 3301 (12:00) is less than the amount of eligible fly back, the Company will deposit the total 12:00 value of 3301 into the pilot's sick bank, and their time card will only show the original 36:00 of pay.

Scenario #2

In a similar situation as in Scenario #1, suppose the rotation that the pilot is awarded on their WS is rotation 3301/15MAR, still worth 12:00. (Note that this award could happen either before or after calling in sick and/or well for rotation 0125.)

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						
		Sick	Well						
					3301	3301			

Because 3301 does not overlap the pilot's sick rotation 0125, it is not sick leave fly back. The pilot will receive 12:00 pay and credit for 3301 in addition to 36:00 for 0125.

Scenario #3

Suppose a pilot is removed under **Section 23 K.** from their rotation 3305/16MAR (now worth 24:00) and is awarded a **Section 23 J.** recovery slip for rotation 0125/12MAR (worth 12:00). This recovery rotation now carries a rotation guarantee of 24:00 (the value of their original NOOP rotation).

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						

What if this pilot now calls in sick for rotation 0125? As this rotation has the full value of the original NOOP rotation 3305, the Company will debit the pilot's sick bank for 24:00.

Now, what if the pilot then calls in well for B day and submit a WS for rotation 3301/13MAR (worth

12:00)?

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						
		Sick	Well						
			3301	3301					

Because 3301 overlaps the sick rotation 0125, it is considered sick leave fly back. The amount of fly back for which the pilot is eligible is the difference between the value of rotation 0125 (24:00) and the value of the portion of the rotation on which they were sick - A Day in this example. Assuming the value of 3301 (12:00) is less than the amount of eligible fly back, the Company will deposit the total 12:00 value of 3301 into the pilot's sick bank, and their time card will only show the original 24:00 of pay.

Scenario #4

In a similar situation as in Scenario #3, suppose the rotation that the pilot is awarded as a WS rotation 3301/15MAR, still worth 12:00. (Note that this award could happen either before or after calling in sick and/or well for rotation 0125.)

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						
		Sick	Well						
					3301	3301			

Because 3301 does not overlap the pilot's sick rotation 0125, it is not sick leave fly back. The pilot will receive 12:00 pay and credit for 3301 in addition to 24:00 for 0125.

Frequently Asked Questions

Q: What do the comments "SKED LEG TIMES DO NOT MATCH" and "LEG CANCELLED" mean?

A: These comments are indicators that the applicable flight segments on your rotation have either been changed from what they originally were on your rotation or that they have been cancelled. These comments do NOT serve as notification from the Company of a change to your rotation. Think of them rather as a heads-up that a change is likely coming.

Q: When has my rotation really been changed?

A: The Company should notify you via CNO, telephone message, iCrew pop-up, or some combination thereof, of any official change to your rotation. Until you receive such a notification, your rotation has not officially changed. Except for a limited set of circumstances, you are under no obligation to acknowledge any changes to your rotation. (See the *When Have You Been Contacted?* chapter of this SRH for a comprehensive discussion of your obligation to acknowledge changes to your rotation.)

Q: At the time that I was awarded my rotation in PCS or the Pilot to Pilot Swapboard, all flight segments were already cancelled. What are my obligations?

A: You have none. **Section 23 K. 1. Exception** provides that a pilot who is removed from their rotation due to cancellation that occurs prior to the addition of the rotation to the pilot's line will have no recovery obligation under **Section 23 K. 1.**

Q: They changed my rotation prior to sign-in, but there was never any mention of NOOP or 23

K.; what now?

A: If you have not been notified of a change to your rotation prior to report, nor have you acknowledged any changes, then you should report as scheduled. Any change to your rotation that exists at that time must comply with the requirements of **Section 23 K. 1. d.**

Q: What constitutes a legal recovery assignment?

A: If you have been removed from the first leg of your rotation, you can be assigned any recovery flying reporting on any day of your original rotation, provided the assignment is made within the first six hours after you report, you are not made to report earlier than your original report, and not scheduled to release later than four hours after your original release (four hours or same calendar day, whichever is later, if the last duty period involves an ocean crossing).

If your first leg remains intact and you are removed from a later leg departing from a station other than your base, you can be assigned any recovery flying so long as you are not made to report earlier than your original report of the rotation or release later than four hours after your original release (four hours or same calendar day, whichever is later, if the last duty period involves an ocean crossing).

If your first leg remains intact and you are removed from a later leg departing from your base, you can only be made to rejoin (or deadhead to rejoin) the remainder of your original rotation.

Q: They changed my rotation, prior to report, to show an earlier report time. What do I do?

A: You are under no obligation to check your schedule or respond to any attempted Company contact; however, if you choose to and recognize this violation, then call Crew Scheduling to inform them that this is an illegal recovery assignment. Let them know that you will report as originally scheduled and be available for flying at that time.

Q: They changed my rotation prior to report, I acknowledged, then they changed it again (still prior to report). What now?

A: Provided there was not a publicly announced waiver of passenger change fees due to IROPs, call Crew Scheduling to inform them that this is an illegal double **23 K.** recovery assignment. Remind them that requiring you to fly this new assignment will result in essentially quadruple pay - you will receive single pay and credit for your original rotation plus double pay, no credit for flying the illegal assignment. In addition, the pilot to whom this trip should have been awarded/assigned will likely receive pay for the trip under **Section 23 M. 7.**

Q: They changed my rotation prior to report, I didn't acknowledge, then they changed it again (still prior to report). What now?

A: Because notification of an award/assignment is a two-step process, the fact that you did not acknowledge the first change means that the notification process was never completed. As such, the second change is the only one of which you were notified. This is therefore your legally assigned recovery flying.

Q: I'm on a recovery rotation; can they still re-route me?

A: Yes. After airborne departure of the first leg of your rotation, **Section 23 L. Reroute** applies as with any other rotation.

Q: How do I contact Crew Scheduling/Tracking when I can't get them on the phone?

A: Please see A Delta Pilot's Guide to Major IROPs and "Keeping It Legal" in Appendix I of this SRH for three scenarios in which this could occur and the best courses of action in each case. In general, you can reach out through sources such as iCrew, Pilot Assist (either by telephone or the Pilot Assist app), your CPO, the Duty Pilot, or your dispatcher in order to pass time-critical information to Crew Scheduling or Tracking.

Q: What is the difference between NOOP and 23 K.?

A: Nothing. They are simply successive steps in the same process. First, a rotation is NOOP. This removes it from the affected pilot(s) line. At that point, either **23 K.**, **4 F. 1.**, or some other pay

designator is placed on the line to apply the rotation guarantee and to indicate the presence of recovery obligation (or lack thereof). During normal operation, this two-step process occurs almost simultaneously, and is typically transparent to the pilot. However, sometimes Crew Scheduling will NOOP a rotation, then later that day remove the NOOP and replace it with **23 K**.

Q: What do I do if they changed my rotation twice, each after an acknowledgement (double 23 K.), and I can't get anyone on the phone or they say it's within policy and I have to work?

A: With the specific exceptions in the *Can They Do That to Me?* section of this SRH, the RLA compels us to follow a "fly now, grieve later" course of action.

If you are unable to resolve this issue in time, you should comply with instructions from the Company and obtain the name of any Company personnel with whom you deal. Keep a copy of all paperwork, particularly the rotation when it was awarded and after each change and contact the MEC Scheduling Committee via the Scheduling Ticketing System (STS) link on the Delta MEC website when time permits.

Q: What is a recovery roster and how can I tell what my position is on the recovery roster?

A: The recovery roster is a list of the pilots in each category who have incurred a recovery obligation. Unfortunately, pilots cannot view this roster in iCrew.

Q: How do I know if I have a 23 K. recovery obligation?

A: There are three ways to determine if you have been so assigned a **23 K.** recovery obligation:

1. Select "Schedules" on the iCrew main page > Schedule Month > OK > Display Reserve **Call Status** Information; you should see a six-hour period beginning with an 'NR'; this will indicate your recovery obligation, to include the beginning and end of your six-hour window
2. Call Crew Scheduling/Crew Assist and ask
3. Call the Delta MEC Scheduling Committee and ask

Q: What happens if I am notified of a NOOP/23 K., then Crew Scheduling subsequently places a recovery assignment on my schedule?

A: If you are notified of and acknowledge a NOOP rotation, then you have zero obligation to the Company until the beginning of your six-hour recovery window, to include no required schedule checks. If Crew Scheduling places an assignment on your schedule that you do not acknowledge, then you have zero obligation to report for the assignment. At the beginning of your window, Crew Scheduling must call you with any assignment.

Q: What's the difference between a reroute under *Section 23 L.* and a recovery under *Section 23 K.*?

A: By definition, a recovery assignment is any change to a regular pilot's rotation prior to the airborne departure of their first flight segment, and a reroute is a change to any pilot's rotation after the airborne departure of its first flight segment. There are certain exceptions defined under **Section 23 L. 2. a.** that allow a reroute prior to the airborne departure of your first flight segment, but any reroute prior to the airborne departure of your first flight segment that doesn't comply with this exception is illegal.

Q: Does a co-terminal operation change my recovery obligations?

A: **Section 12 O. 1. d.** requires that any recovery assignment must begin and end at the co-terminal airport for which the pilot was originally scheduled. A surface DH from one co-terminal airport to another to begin said recovery flying is not allowed and would constitute an illegal recovery assignment.

Reroute (23 L.)

When a pilot's **original** rotation is altered (one or more flight segments are added or deleted) and they are notified of that alteration after the airborne departure of the first segment (including deadhead), Section 23 L. reroute rules apply. Simple "late operations" or an alteration of departure, enroute, and arrival times of the same scheduled flight (flight number & city pair) do NOT constitute a reroute, even if such late operations extend into a subsequent day.

An "original rotation" is a rotation as it appeared when it was *initially* placed on a regular or reserve pilot's schedule. This applies to both bid package rotations and rotations created by Crew Scheduling after publication of the bid package (e.g. a "will need" or split rotation). Once a pilot has been rerouted and is actively flying or deadheading on a rerouted segment, they are no longer on their "original rotation." Their new rotation at the moment of the reroute is now their "as scheduled" rotation.

NOTE ONE: When a pilot has been removed from their rotation due to an IROP affecting that rotation and assigned recovery flying under **Section 23 K.** of the PWA, the recovery flying to which they have been assigned is now considered to be their "original rotation." A reroute off of that recovery flying is **subject to** applicable reroute pay as described below.

NOTE TWO: It is sometimes necessary for the Company to alter the flight number of a given segment during late operations due to ATC constraints, particularly when the delay causes the flight to depart on the following day. When this is necessary, a remark will be made in the Flight Advisory Messages (FAM) and/or the pilot's rotation history indicating that the new flight number is protection for the original flight number designation. Such a delay and renumbering of the flight is *not* a reroute.

A pilot may access the FAM remarks for a given flight from a computer inside the Delta firewall, e.g., a computer in the pilot lounge, training center, etc. Navigate to DeltaNet > Company > Operations & Customer Center > Operations Info, then select either Flight Advisory Messages or Flight History to see the FAM remarks.

A pilot who operates or deadheads on a flight segment that did NOT appear on their "original rotation" *has been rerouted*. Such a pilot is not considered to have been returned to their original rotation until they either operate or deadhead on a segment that was part of their original rotation. A pilot who simply lays over at the originally scheduled location **has not rejoined their original rotation**. They must **actually operate or deadhead** (as appropriate) a leg from their original rotation.

A pilot may not be rerouted into more than one duty period, not to exceed one calendar day, that originates after the end of their originally scheduled rotation, with the following exceptions. They may be rerouted into more than one duty period and/or calendar day that originates after the end of their originally scheduled rotation due to the Company's:

- Inability to return them to their base (on-line) due to weather on a pilot's routing, pilot's origin or destination airport closed, in which case they must be returned to base by a direct routing, either flying or deadhead, and released upon arrival.
- Decision (within the Company's control) to cancel the pilot's flight segment (e.g., use of their assigned aircraft on another routing, mechanical on the pilot's aircraft), in which case they must be returned to their base on the first available on-line or off-line flight and released upon arrival.

Upon reaching their base while on a reroute, a pilot will either be:

- Returned to their original rotation at their base, or deadheaded to rejoin the remaining portion of the pilot's original rotation via the most direct route (cannot be given any new working flight segments)

-OR-

- Released with no further obligation
 - A regular pilot will be pay protected to their rotation guarantee

- A reserve pilot will not receive a rotation guarantee but will return to on call status after their release
- All pilots will retain reroute pay for the rerouted legs flown

Note: This is NOT subject to the “Fly Now and Grieve Later” policy.

Example:

Original Rotation

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
SAV-ATL	ATL-MIA	ATL-DFW
ATL-CVG	MIA-CVG	DFW-ATL

Rerouted Rotation (OK)

A Day	B Day	C Day
ATL-SAV	CVG-ATL	*DTW-DCA
SAV-ATL	*ATL-TPA	*DCA-MSP
ATL-CVG	*TPA-DTW	*MSP-ATL

* = rerouted flight segments

This is OK because the reroute originates at the pilot’s base but doesn’t subsequently transit their base until the pilot’s release

Rerouted Rotation (not OK)

A Day	B Day
ATL-SAV	*DAL-ATL
SAV-ATL	*ATL-TPA
*ATL-DAL	*TPA-ATL

* = rerouted flight segments

This is not OK because the reroute passes through the pilot’s base. After the first flight on B Day, the pilot must either be returned to their original rotation or released.

A pilot whose reroute includes a break in duty at their base is entitled to a hotel room, provided they request one at the time they are notified.

At the time of a reroute, all uncovered flights that are removed from a rerouted pilot’s rotation due to the above restriction must be built into one or more rotations, placed in open time, and covered via normal trip coverage. For example, if the pilot on the above reroute is released from the remainder of their original rotation on B Day, the ATL - TPA - ATL flights must be placed into open time; this open time may be in a base determined by Crew Scheduling.

In addition, any uncovered flight segments which were removed from the pilot’s original rotation as a result of the reroute, and that are beyond the current duty period, must also be placed into open time and covered via normal trip coverage, unless doing so causes a PWA or FAR conflict. In the narrow instance that a pilot may receive these legs as a reroute because they cannot be built into a legal rotation otherwise, the pilot’s rotation must be annotated by Crew Scheduling, and the MEC Scheduling Committee must be notified, to disclose that a reroute under this exception was performed.

Example:

Original Rotation

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
SAV-ATL	ATL-MIA	ATL-DFW
ATL-CVG	MIA-CVG	DFW-ATL

Rerouted Rotation

A Day	B Day	C Day
ATL-SAV	CVG-ATL	*DTW-DCA
SAV-ATL	*ATL-TPA	*DCA-MSP
ATL-CVG	*TPA-DTW	*MSP-ATL

* = rerouted flight segments

Assuming the pilot was rerouted the morning of B Day, and the two flights on that day (ATL-MIA and MIA-CVG) were used by Crew Tracking for a reroute on another pilot's rotations, the three uncovered flights on C Day must be placed in open time so long as they can be built into a rotation beginning with a legal deadhead flight to CVG.

If this is not possible, the flights that cannot be built into a legal rotation may be used for a reroute, but the rerouted pilot's rotation must indicate the fact that the flights were not able to be built into a legal rotation and the ALPA Scheduling Committee must be notified.

Finally, if a rerouted pilot is to be returned to their original rotation away from base via deadheading, that deadheading must be by the most direct means possible. This deadhead flight segment(s) will also generate reroute pay for the pilot.

When a pilot is rerouted, and the reroute causes the pilot to arrive at their base after the original rotation's scheduled release time, they are entitled to receive positive space transportation to any Company station, provided they make this request with Pilot Assist after they are notified of the reroute. A pilot who is unable to commute home that day due to a reroute will receive a hotel in base (to include positive space transportation on the following day), at pilot's request to Pilot Assist. The need for such a request will likely become evident to the pilot toward the end of their rerouted rotation.

Reroute—Regular Pilots

1. A regular pilot may not be rerouted prior to the airborne departure of the first flight segment of their rotation (Section 23 L. 2. a.), unless:
 - a. their rotation begins with a roundtrip within a single FDP that has been delayed,
 - b. the reroute is for another roundtrip within a single FDP that is scheduled to depart no earlier than the original roundtrip, and
 - c. they are returned to their original rotation following the roundtrip into which they are rerouted.

Note: Such a pilot will receive:

- 1) Single pay and credit (or the applicable pay, no credit for a GS, GSWC, IA, or IAWC) for the greater of their original rotation or the rotation flown, plus
- 2) Single pay, no credit for the roundtrip into which they are rerouted.
2. A regular pilot may not be rerouted into a flight that departs after the arrival of the last segment of their rotation, as it currently exists, i.e., tag-on flying, unless the flight had previously been removed from their rotation (Section 23 L. 2. b.).
3. A regular pilot whose reroute is scheduled to release more than four hours after their originally scheduled release (25 hours for transoceanic duty periods) is eligible for reroute pay unless the late release was due to their origin or destination airport being closed or weather on their route of flight. (See Sections 23 L. 8. and 14.)

Reroute—Reserve Pilots

1. A reserve pilot may be rerouted prior to their first airborne departure. (**Section 23 L. 2. a. applies only to regular pilots.**)
2. A reserve pilot who is rerouted into a rotation that contains a break in duty at their base (domicile layover) will be returned to their original rotation immediately after the layover. The pilot will have the option of requesting to be removed from the remainder of the rotation instead by notifying Crew Tracking when acknowledging the reroute. If the pilot chooses to be removed from the rotation, then they will lose any credit toward their guarantee of the portion of the rotation from which are removed.
3. A reserve pilot may not be notified of a reroute during or after their prerelease schedule check.
4. A reserve pilot whose reroute is scheduled to release more than four hours after their originally scheduled release (25 hours for transoceanic duty periods) is eligible for reroute pay for any duty period that extends into either an X-day or a regular line day-off unless the late release was due to their origin or destination airport being closed or weather on their route off flight. (See ***Sections 23 L. 9. and 14.***)

Reroute Pay

The pay treatment of a rerouted pilot depends upon certain triggers. Reroute pay treatments are additive and apply to both regular and reserve pilots. Reroute pay is pay, no credit (above the guarantee for a reserve pilot) and is in addition to all other forms of pay due for the rotation.

Reroute pay under ***Section 23 L. 4.*** is always due if legs not on the original rotation are flown. It is important to remember that reroute pay is only due on added flight segments if they are actually flown. While reroute pay is not due for deleted flight segments, pay for such flight segments deleted from a rotation will be captured in the rotation guarantee. Reroute pay is triggered upon the first addition or deletion of a flight segment.

Additionally, if a pilot is rerouted outside certain release parameters (see below) of their original rotation, then ***Section 23 L. 8.*** (Regular) or ***23 L. 9.*** (Reserve) pay will be applied *in addition to* any pay generated by ***Section 23 L. 4.***

Rotation guarantee is calculated at the conclusion of a rotation and includes actual flight time, deadhead time, minutes under (MU), the various trip and credit rigs, and pay, no credit pay treatments such as EDP Pay, ADG Carveout Pay, etc. Please refer to the Rotation Pay Calculation chapter of this SRH for a full discussion of how rotation guarantee is determined. Reroute pay is always in addition to any other rotation pay, including rotation guarantee.

As a reminder, reserve pilots are not entitled to rotation guarantee, to include additional pay items such as EDP, Sit, or ADG Carveout Pay. A reserve pilot will receive pay and credit and any applicable pay, no credit only for the rotation as flown.

Section 23 L. 4. Pay Calculation

For the purposes of reroute pay under ***Section 23 L. 4.***, the duty period that the first leg is added and/or deleted constitutes the first duty period of the reroute. Note that this may be a different duty period than the duty period in which the reroute message was received.

On the first duty period of the reroute, you will receive one-half pay, no credit for any flight segments added to your original rotation, whether deadheading or operating, in addition to the to all other forms of pay due. To calculate reroute pay, add up the block time of the rerouted segments as well as any MU time, and divide this value by two. Removed legs do not carry additional pay, but as previously stated, they DO trigger the reroute step pay sequence for any future duty periods.

On the duty period subsequent to the first duty period of the reroute, you will receive single pay, no credit for flight segments added to your original rotation, whether deadheading or operating, in addition to all other pay due for those segments. As above, MU time is added to block time.

If you are rerouted then subsequently returned to your original rotation, and then rerouted an additional time, the pay treatment continues to be single pay, no credit for any flight segments added to your original rotation, whether deadheading or operating. *There is no initial one-half pay step in this instance, and any subsequent reroute will always pay single pay, no credit.*

As mentioned above, if you are rerouted by having a flight segment deleted from your rotation followed by a break in duty, any subsequent rerouted legs will pay single pay, no credit premium, as the reroute began prior to the break in duty.

Last Day/Last Leg & Trip Credit Calculation under Section 23 L. 4.

If you are rerouted and that reroute *changes the last leg of the rotation* (i.e., your last leg is not the “original” scheduled last leg), any credit due (ADG, MCD, etc.) for the rotation is also subject to the reroute pay calculation at whatever premium is in effect for that leg (50% or 100%).

An expedient method to obtain the credit due for the rotation is to utilize the “*Archived Rotations*” function in iCrew, on the “Preflight” pull down menu. This function displays the rotation with the relevant credit already calculated.

13	2521	SJC 0617	MSP.1203	3.46	0.06	1.27	*	8301
	2109	MSP 1330	ORD.1504	1.34		0.54		8133
	D2109	ORD 1558	MSP.1744	1.46				
						1.46	DHD	
MSP	11.46	MARRIOTT CITY CENTRE		5.20	B			
						7.12	TL	
14	D2127	MSP 0700	SLC.0855	2.55		5038		
						2.55	DHD	
				0.00	B			
						2.55	TL	
						2.28	TRP	
						0.25	MCD	
						0.49	ADG	
REGULAR-	21.00	TL	8.45	BL	12.09	CR	0.06	MU
RESERVE-	21.00	TL	8.45	BL	12.09	CR	0.06	MU
						TAFB	70.40	CR
						TAFB	70.40	EX

In the lower right-hand corner of this display, just under the block/DH time for the last duty period, a list of credit values appears (red box). The *sum* of these values represents the credit due for the rotation, and this is the value utilized for the reroute pay calculation for both 23 L. 4. and 23 L. 8. & 9. should the last leg of the rotation be a rerouted leg. In this example, the credit due would be 3:42, and any relevant premium calculation would be performed with this value.

Section 23 L. 8. and 9. Reroute Pay

With a few exceptions, if a regular pilot is rerouted so that they are scheduled to be released more than four hours beyond the scheduled release time of their original rotation (the time limitation), then there may be additional pay due under **Section 23 L. 8.**, over and above the **Section 23 L. 4.** pay treatment. If a reserve pilot is rerouted as described above, the reroute must interrupt an X-day (or regular line day off) in order to qualify for reroute pay under **Section 23 L. 9.**

There are a few exceptions:

- “Transoceanic Exception”: The time limitation is 25 hours for a pilot when rerouted into, or while in, trans-oceanic operations.
- “The Weather Exception”: If a rerouted pilot is not scheduled to release at their base

within the time limitation due to their origin or destination airport being closed or weather on their routing, the pilot will not receive reroute pay under **Section 23 L. 8.** or **9.**

- “The reroute to undo a reroute Exception”: A rerouted pilot who is scheduled to be released at their base beyond the time limitation will not be entitled to reroute pay under **Section 23 L. 8.** or **9.** if the pilot is again rerouted for the purpose of releasing them at their base within the time limitation.

Note: In each of these cases, any reroute pay due under **Section 23 L. 4.** still applies and is unaffected by reroute pay under **Sections 23 L. 8.** and **9.**

Section 23 L. 8. Pay (Regular Pilots)

If a regular pilot is rerouted so as to be scheduled to release more than four hours beyond the release time of their original rotation, they will receive single pay, no credit for any duty period that is scheduled to extend beyond this limit, in addition to any other form of pay for the rotation.

The practical application of this is that if triggered, the final duty period, and all flying therein will receive an additional single pay, no credit, including any credit for the rotation that is due. If the pilot was rerouted into an additional duty period, such duty period will also generate an additional single pay, no credit premium as well as a new underlying rotation guarantee.

Section 23 L. 9. Pay (Reserve Pilots)

Pay for being scheduled to release beyond the time limitation works very much the same for reserve pilots as it does for regular pilots, but only if the rerouted duty period infringes an X-day or a regular line day off (e.g. transitioning bid periods from reserve to regular). If the reserve pilot is rerouted on or into additional on-call days, then no **Section 23 L. 9.** reroute pay is due, but **Section 23 L. 4.** pay will be due as applicable.

If it is triggered, the pay treatment is identical to the treatment for regular pilots -- single pay, no credit (above the reserve guarantee) for all duty periods that were scheduled to release beyond the time limitation.

Calculating Section 23 L. 8. & 9. Pay

If the reroute pay trigger has been met under **Section 23 L. 8.** or **9.**, the pay calculation is fairly straightforward. Add up all the block and MU time for the entire last duty period, to include all credit due for the rotation (exactly as it was done for **Section 23 L. 4.** described above). **Section 23 L. 10.** permits reroutes into one additional duty period, not to exceed one calendar day. If an additional duty period was added to your rotation, it is also covered by the premium, and should be included in your calculation. The rotation credit on your rotation display will take into account the extra duty period.

The reroute pay calculated for **Section 23 L. 8.** or **9.** should be added to the reroute pay for **Section 23 L. 4.** to get the total reroute pay due for the rotation.

Example:

Original Rotation

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
SAV-ATL	ATL-MIA	ATL-DFW

SAV-ATL	*ATL-TPA	*DCA-MSP
ATL-CVG	*TPA-DTW	*MSP-ATL

* = rerouted flight segments
rerouted scheduled release @ 2300E

Resulting Pay

- Applicable pay and/or credit for the entire rotation, plus
- One half pay, no credit for the last two flights on B Day under **23 L. 4.**, plus
- Single pay, no credit for all three flights on C Day under **23 L. 4.**, plus
- Single pay, no credit for all of C Day, to include any rotation credit due, under **23 L. 8.** or **9.**

Comprehensive Examples

Example 1: In the following example, the pilot was rerouted from their original legs on their last round trip on the last day (Cday) of the rotation to ATL - YUL - ATL (red box). The reroute was scheduled to release within 4 hours of the original release time, so Section 23 L. 8. & 9. reroute pay was not due.

To calculate reroute pay due under **Section 23 L. 4.**, the block time and minutes under (“MU”) of the rerouted legs are added together: 2:29 + 0:10 + 2:40 + 0:11 for a total of 5:30. As this was the first duty period of the reroute, this is multiplied by 0.5 to determine the pay for the rerouted legs, or 2:45.

As the last leg of the rotation was also part of the reroute, the trip credit due is also paid at the appropriate reroute premium. To determine the trip credit, look for the display of credit that appears on the right side of the display of the last duty period (green box). This display will vary depending on the type of credit that is due with the rotation. In the above example this value is 0:58. Now check the rotation for any DTY or DPM credit (in the yellow boxes, but not all rotations will have it). Add these numbers to the green box total. The total trip credit in this example is 2:36 (0:58+1:08+0:30). Since this is the first duty period of the reroute, this value is also multiplied by 0.5, or 1:18. Added to the leg premium, the total value of the **Section 23 L. 4.**

reroute pay is 4:03 (2:45 + 1:18). This is the value that should appear as “RRPY” on your time card, adjacent the rotation.

Note: Reroute pay is above all other pay due for the rotation, including pay features such as SIT pay and EDP pay (0:02 & 0:15 respectively).

Example 2:

This is a slightly more complex example that demonstrates deleted legs and the reroute pay sequencing.

In this example, the originally scheduled LAX-DCA-DTW on the 29th was truncated due to a gate return by deleting the DCA-DTW leg (blue arrow). The crew laid over in DCA. The crew was then subsequently deadheaded (via the most direct route) to rejoin their rotation's last leg. Since the deleted leg on the 29th triggered the reroute, all rerouted legs in the subsequent duty periods receive the 100% pay, no credit reroute pay.

In this example, the two rerouted legs, plus MU time is 3:40. As the last leg of the rotation was part of the original rotation, no reroute pay from rotation credit is due. The pilot should have an entry on their time card of RRPY with a value of 3:40.

Example 3:

The following rotation appeared in the bid package:

DAY	FLIGHT T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX

	0.00	HOL	0.00	CARVE	0.23	SIT	5.07	EDP	

The only portion of the original rotation operated was the first leg. The crew had a deleted leg on the first duty period (blue arrow), followed by a break in duty, which triggered the reroute pay sequence. Due to this, all legs on the B and C days paid at the 100% reroute premium. In addition, as the last leg of the rotation was also a rerouted leg, the pilots were due reroute pay on the rotation credit.

Reroute pay would be calculated thus: B day 1:11+1:18+0:01+1:08 = 3:38. For C day, 5:30. Trip credit is added by adding the values in the green & yellow boxes, or 1:38. Total **Section 23 L. 4.** reroute pay for this rotation should show on the Time Card as RRPY with a value of 10:46.

Due to a double gate return, the last leg on C day was removed (blue arrow) , the pilot laid over in MSP and DHed home the next day. As the removed leg on C day triggered the reroute, the DH on D day was paid at the 100% pay step, and as the last leg of the rotation, also paid reroute pay on any credit due. As the reroute released the pilot earlier than on the original rotation, no **Section 23 L. 8.** or **L. 9.** pay was due.

To calculate the reroute pay, the single leg on D day is 2:42, in addition to any credit due, which in this example 2:57+ 2:01, or 4:58 total. RRPY for the rotation on the Time Card should be 7:40.

Example 5:

The original rotation from the bid package:

```

The reroute began with the deleted leg on the B day, and a new leg to SFO (rerouted legs shown in the blue box). As this leg was during the first duty period of the reroute, the reroute premium is 50% (1:06). The 100% premium will apply for all subsequent duty periods of the rotation, as the pilot never rejoined their original rotation. Further, as the last leg of the rotation was a rerouted leg, the trip credit is also paid at the 100% premium. In this example, **Section 23 L. 4.** pay due would be $((2:11/2)+3:46+0:06+1:34+1:46+2:55)$, plus the value of the rotation credit (green & yellow boxes) of 5:23, for a total of 16:36. An RRPY entry on the Time Card will appear with this value.

This pilot was also rerouted into an additional duty period on what was originally a three-day rotation. Because none of the exceptions were met and the pilot was on a regular line, **Section 23 L. 8.** reroute pay was due.

To calculate this additional reroute pay due, the block and MU time for the entire original last duty period of the rotation (C day) is added, along with any block and MU from the additional duty period (sum of the totals in the red box). In this case, that totals 10:07 $(3:46+0:06+1:34+1:46+2:55)$.

Rotation credit in this example is also included because the final segment of the rotation was part of the reroute. Recall when the new duty period is added, the rotation credit is recomputed and will take into account the additional duty period. Adding the values in the green & yellow boxes provides a total of 5:23. Together with the block/MU time, the total **Section 23 L. 8.** reroute pay is 15:30. The value shown next to the "Reroute Pay" entry on the lower left of the Time Card should increase by this value.

This same calculation would have applied to a reserve pilot under **Section 23 L. 9.** had the *additional duty period encroached upon an X-day or a regular line day off* (in the case of a transition from reserve to regular.)

Total reroute pay for the rotation (**Sections 23 L. 4 & 23 L. 8.**) is 32:06 pay, no credit, in addition to all other forms of pay for the rotation.

Example 6:

In the following rotation, the pilot was rerouted from a four-day rotation into a 5th day due a gate return and a missed deadhead returning to base.

The removal of the DH on the D day (blue arrow) triggers the pay sequence for **Section 23 L. 4**. Therefore, the single leg on E day has a premium of 100%. Since the last segment of the rotation was a rerouted leg, trip credit is also subject to the same premium. RRPY pay for this rotation should be 1:44 (1:34 + 0:10) for the additional leg on E day, and 4:09 (2:43 + 0:30 + 0:16 + 0:40) for the credit due, all of which is pay, no credit.

Note that in this example, there is a slight variation in the calculation of credit due because of the presence of Duty Period Minimum (DPM) on the last day of the rotation. DPM provides for at least 2:00 per duty period, but as this is the last duty period of the rotation, is calculated as part of the credit due. This brings the total reroute pay owed under **Section 23 L. 4**. to 5:53.

Since this reroute was also scheduled to release the pilot beyond the four-hour limitation and was not subject to any of the exceptions, **Section 23 L. 8**. reroute pay was also triggered. In this example, that includes the block & MU time for D and E days, as well as any rotation credit due. Rotation credit values are in the green & yellow boxes. Adding these values (0:59 + 0:12 + 0:10 + 1:22 + 0:03 + 0:40 + 1:34 + 0:10 + 0:16 + 2:43 + 0:30) provides total of 8:39. This pay should be reflected in the "REROUTE PAY" entry on the time card.

How to Find Reroute Pay on your Time Card

For each rotation that has received pay under **Section 23 L. 4**., a line-item entry on your Time Card with the code "RRPY" will appear with the pay hours due. This entry will normally appear just below the rotation on which it was earned.

Unlike **Section 23 L. 4.** reroute pay, there is a dedicated entry for **Section 23 L. 8.** and **9.** pay near the bottom of the Time Card labeled “Reroute Pay.” However, this line does NOT break out the pay by individual rotations; it is rather the accumulation of all **Section 23 L. 8.** or **9.** pay for the entire bid period.

You may notice an “RR” (reroute) or an “RS” (reroute spill for rotations that carry over into the bid period) next to a rotation that has triggered **Section 23 L. 8.** or **9.** This only serves as notice that the marked rotation changed its footprint (longer or shorter). It populates automatically but has no significance in calculating any type of reroute pay or even if reroute pay is due.

Rerouted rotations are reviewed by Crew Scheduling, generally within a few days after completion of the rotation. The presence of reroute pay on a pilot’s time card during the rotation or immediately after the end of the rotation does not indicate that a final determination has been made. Reroute pay may be added or removed after completion of the review.

If you believe you are due reroute pay that is not appearing on your Time Card, utilize the red pay button on the Crew Assist app to submit your inquiry. Normally, reroute pay will be reviewed within seven business days, but major operational interruptions can extend this timeline. If not satisfied with the response, please contact the MEC Scheduling Committee via the Scheduling Ticketing System (STS) link on the Delta MEC website.

Rotation Change to Same Flight

Changing from an operating to a deadheading crewmember or from a deadheading to an operating crewmember on the same flight is an alteration to that pilot's rotation. The PWA further provides for a narrow and specific set of circumstances in which this may occur prior to the airborne departure of the first leg of a rotation and establishes the appropriate pay treatment for when this occurs. This provision may only be used to change a single leg of any rotation, with further restrictions and conditions listed below.

For the purposes of this carveout, the terms "same flight" and "same flight segment" mean a flight segment in which the aircraft type, flight number, departure and arrival airports, and the scheduled departure date have not changed. The one exception to this is when the flight has been delayed to the following day and the flight number must be changed so that there are not two of the same flight numbers on the same calendar day. The rotation remarks will annotate the use of this exception.

Scenarios

For all examples below, an ATL-based pilot currently holds the following rotation:

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
SAV-ATL	ATL-MIA	ATL-DFW
ATL-CVG	MIA-CVG	DFW-ATL

DH - Deadhead (Change from either Operate to DH, or DH to Operate); RR - Reroute

Operating to Deadheading:

Prior to the airborne departure of the first flight segment of a pilot's rotation, that rotation may be changed from the pilot operating a single flight segment, to deadheading on that same flight segment. If this occurs, the pilot will be paid as though they have been rerouted on that flight segment.

- If an actual reroute occurs in a duty period prior to the duty period in which this change occurs, the pilot will receive single pay, no credit for the changed flight segment, in addition to any other pay for the rotation.
- If not, the pilot will receive one-half pay, no credit for the changed flight segment, in addition to any other pay for the rotation, and any reroutes that occur in subsequent duty periods will result in single pay, and credit in addition to any other pay for the rotation.

Example 1

Assumption: The pilot is changed from operating to deadheading on the ATL-MIA leg, and later is rerouted to a different layover on B Day.

A Day	B Day	C Day
ATL-SAV	CVG-ATL	(RR) DTW-ATL
SAV-ATL	(DH) ATL-MIA	ATL-DFW
ATL-CVG	(RR) MIA-DTW	DFW-ATL

Result: The changed and rerouted legs ATL-MIA and MIA-DTW on B Day each add one-half pay, no credit to the pilot's pay for the rotation, and the changed leg DTW-ATL on C Day adds single pay, no credit to the pilot's pay.

Example 2

Assumption: The pilot is changed from operating to deadheading on the ATL-MIA leg and after the first airborne departure is rerouted as shown on A and B Days.

A Day	B Day	C Day
ATL-SAV	(RR) DTW-ATL	CVG-ATL
(RR) SAV-LGA	(DH) ATL-MIA	ATL-DFW
(RR) LGA-DTW	MIA-CVG	DFW-ATL

Result: The changed SAV-LGA and LGA-DTW legs each add one-half pay, no credit to the pilot's pay for the rotation, and the rerouted and changed legs DTW-ATL and ATL-MIA on B Day each add single pay, no credit to the pilot's pay.

Example 3

Assumption: The pilot is changed from operating to deadheading on the ATL-MIA leg and is later rerouted as shown on C Day.

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
SAV-ATL	(DH) ATL-MIA	(RR) ATL-HOU
ATL-CVG	MIA-CVG	(RR) HOU-ATL

Result: The changed ATL-MIA leg adds one-half pay, no credit to the pilot's pay for the rotation, and the rerouted legs ATL-HOU and HOU-ATL on C Day each add single pay, no credit to the pilot's pay (in addition to any other form of pay). Recall that since the last leg of the rotation is a rerouted leg, any trip credit will be paid at the appropriate reroute premium (in this case 100%).

Deadheading to Operating

Prior to the airborne departure of the first flight segment of a pilot's rotation, if the Company desires to change a single flight segment on a rotation from the pilot deadheading to operating that same flight segment, they may do so only *as a proffer to the pilot*. If the pilot accepts the proffer, they will receive single pay, no credit for the changed flight segment, in addition to any other pay for the rotation. If the pilot declines the proffer, they will remain on the originally scheduled deadhead, unless the Company chooses to remove the pilot from all or a portion of their rotation under **Section 4 E. 1.** of the PWA.

Also, assuming the pilot accepts the proffer, any later reroutes in the same rotation, whether occurring in a prior, subsequent, or the same duty period, will each generate an additional single pay, no credit for the affected leg(s), in addition to any other pay for the rotation.

Example

Assumption: The pilot was originally scheduled to deadhead ATL-MIA on B Day of the original rotation, they accept a proffer to now operate that flight, and after the first airborne departure they receive multiple reroutes as shown on A and C Days.

A Day	B Day	C Day
ATL-SAV	CVG-ATL	CVG-ATL
(RR) SAV-LGA	(DH) ATL-MIA	(RR) ATL-HOU
(RR) LGA-CVG	MIA-CVG	(RR) HOU-ATL

Result: The rerouted and changed SAV-LGA, LGA-CVG, ATL-MIA, ATL-HOU, and HOU-ATL legs each add single pay, no credit to the pilot's pay for the rotation (in addition to any other form of pay). Recall that since the last leg of the rotation is a rerouted leg, any trip credit will be paid at the appropriate reroute premium (in this case 100%).

Notes

- Once a pilot *has reported* for a deadhead-only duty period, they *cannot* be made to

operate a flight segment within that duty period.

- Prior to the airborne departure of the first leg of a pilot's rotation, changing from deadheading to operating or vice versa is limited to a single flight segment per rotation.
- All of the examples above assume the pilot was awarded or assigned the rotation to be paid as single pay and credit. The pay treatments listed for each of the above examples (as a result of the flight segment change and/or reroute(s)) are paid in addition to any other pay due (e.g., green slip, silver slip).

After Airborne Departure of First Flight Segment

After the airborne departure of the first flight segment of a pilot's rotation, changes to the pilot's rotation must conform with the PWA, including all reroute rules.

Trip Buys

This provision is not applicable to any schedule changes related to trip buys. A regular pilot will retain full rotation guarantee with no recovery obligation if this occurs.

Changes to Charter and MAC Rotations

Delta Air Lines operates a significant number of charter operations, both civilian and military air charter (MAC), services that often require additional flexibility beyond those provided in its scheduled operations. Changes to charter rotations are more common than with non-charter rotations, and **Section 23 G. 4.** of the PWA provides certain exceptions to the normal restrictions and limitations reroutes, etc.

Definitions

While the term "charter" is not specifically defined in the PWA, it has long been understood to mean a given flight segment(s) that is available only to a select party of passengers. Charter segments are identified on a rotation by flight numbers ranging in the 8000's.

The PWA defines Military Airlift Charter (MAC) as being a flight(s) conducted as a charter under an agreement between the Company and a branch of the United States Armed Services, except for Civil Reserve Air Fleet operations. A MAC rotation will be identified with a rotation designation that begins with the letter "M." It will contain only MAC flying and associated ferry flight segments.

Section 23 G. 4. - Allowances on Charter Operations

1. **Allowances for "mixed" flight operations** - Rotations containing charter segments may also contain ferry flights and/or non-charter flight segments.
Exception: MAC rotations may only contain MAC flying and associated ferry flight segments.
2. **Allowance for advanced report** - The report time for a rotation that begins with a non-MAC charter segment or a ferry flight to a non-MAC charter segment may be advanced by the same period of time permitted by **Section 23 G. 3.** on non-charter rotations (i.e. 15 minutes or less). An advanced report time of up to one hour is permitted only on MAC rotations. The pilot(s) assigned to such flight segments will not be considered to be removed or rescheduled. As with an advanced report to a non-charter rotation, a pilot who does not receive notice of such advancement will not be liable for a late show.
3. **Allowance for delayed report** - The report time for a MAC rotation may be delayed up to 24 hours. If the report is delayed by more than five hours, the affected pilots are entitled to lodging at their base upon request under **Section 5 E. 1. e.** of the PWA and will not be considered to be removed or rescheduled.
4. **Allowances for altered itinerary** - Departure time, arrival time, and intermediate stops of charter segments on a rotation, such as fuel stops, may be added or altered either prior to

or after report. The pilot(s) assigned to such flight segments will not be considered to be removed or rescheduled.

This applies only to the intermediate stops of charter segment(s) and any associated ferry flights. The primary origin and destination of charter segment(s) contained in a rotation may not be changed once the rotation has been awarded/assigned to a pilot. Rather, the pilot(s) must be removed from the rotation and the rotation be rebuilt as needed.

Exception: All segments of a MAC rotation may be altered as needed, including the primary origin and destination and thus the city pairing(s) of any associated ferry flights.

Delayed Operations on Charter and MAC Rotations

As with all Delta flight operations, charter and MAC flight segments are susceptible to delayed or late operations, sometimes more so. Any delay to a charter segment(s), a ferry flight to/from a charter segment, or a MAC segment(s) which results in the late release of the pilot(s) at their base must comply with the time / duty period limitations of a rerouted pilot under **Section 23 L. 10.** (i.e., one duty period, not to exceed one calendar day, with certain exceptions). A delay beyond such limitation as coordinated between Delta and the charter customer would require the pilot(s) originally assigned to such flying to be returned to their base as soon as possible. A new rotation would need to be constructed to cover the delayed charter / MAC flying.

Reroutes on Charter and MAC Rotations

Reroute pay due under **Section 23 L.** would not apply to a rotation that has undergone changes as permitted under the aforementioned allowances. However, a non-MAC rotation that contains charter segments may also contain non-charter segments. A reroute involving such segments would be subject to the applicable pay treatment(s) as prescribed by **Section 23 L.**

Critical Evacuation Situations

There are certain situations in which it is desirable that a crew be immediately deadheaded out of a given city into which they have flown without the contractually required break in duty. Examples of these include an outbreak of COVID-19 in a particular location, a missile attack, etc.

Should such an extenuating circumstance occur, the affected pilot(s) will each be afforded the OPTION of deadheading to a safe location and/or back to base without first receiving a contractually required break in duty.

- This deadhead assignment will comply with the seating requirements of **Section 8 F.**
Deadheading
- If the pilot accepts such a proffer, they will receive single pay and credit (or the applicable pay, no credit) for the greater of the rotation as flown or rotation guarantee, plus single pay, no credit for the additional deadhead flight(s) that created the noncompliant break in duty

The Company will not construct, award, or assign a rotation with such a noncompliant break in duty. Rather, such a deadhead(s) will only be added to a pilot's rotation via a reroute after it has been awarded or assigned.

For example, suppose that a pilot has been awarded or assigned the following rotation:

#A039	SA	EFFECTIVE SEP. 23 ONLY										CHECK-IN AT 14.00	
POS - A,B													
DAY	FLIGHT T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX			
A	234	JFK 1530	TLV 0930	11.00			339 M	12.30/18.30	12.30/18.00	4			
		TLV 60.25/CARLTON	TEL AVIV					11.00/17.00	.00CRD	11.00TL			
D	235	TLV 2355	JFK 0510	12.15			M	13.45/17.00	13.45/16.30	4			
								12.15/17.00	.00CRD	12.15TL			
								.00MCD	1.48TRP	.00DPA	1.12ADG		
TOTAL CREDIT		26.15TL	23.15BL	3.00CR	26.15FDP					TAFB	87.40		
TOTAL PAY		26:15TL	.00SIT	.00EDP	.00HOL			.00CARVE					

Suppose that after the rotation has been placed on the pilot's line, or perhaps after the flight to TLV has departed, Tel Aviv suffers a missile attack. While Delta desires to complete the flight from JFK to TLV - in order to allow its passengers to travel there as needed and retrieve any crews who are currently there - the Company also wishes to protect its crews by returning them to JFK as quickly as possible. The crew flying DL232 JFK-TLV will be proffered a reroute to deadhead on the return flight DL 233 TLV-JFK that same day.

If a pilot on this crew declines the proffer, that pilot will be housed in TLV at a safe location and brought back to base as soon as possible after receiving a contractually compliant break in duty.

- A pilot who accepts the proffer will be deadheaded on the return flight to JFK and provided a Business Class seat in accordance with **Section 8 F. 4. a.** of the PWA
- In this case, the pilot will receive single pay and credit (or the applicable pay, no credit) for the value of the rotation (26:15) plus single pay, no credit for the value of the deadhead flight that created the violation (12:15).

A rotation with such a noncompliant break in duty may not remain in open time or be awarded or assigned to any pilot. Pilots always have the option of declining the proffer of the immediate deadhead and availing themselves of a contractually compliant break in duty.

There are two sets of rules to consider regarding flight and duty time limits and rest requirements:

- FAR limits
- PWA limits

In every case, the most restrictive rules apply.

FAR Flight Duty Period (FDP) Limits

FAR Part 117 limits the total time in a Flight Duty Period, ending at block-in of the last flying segment. Post-flight duties and deadhead segments at the end of a pilot's duty period do not count as part of the FDP.

The FAR limits the length of time a pilot may be scheduled and required to remain on duty when performing flying. It distinguishes between duty (time that a pilot is required to perform a task for the Company other than flying) and flight duty (the time between report for duty involving flying and the block-in of the last flying segment).

A flight duty period (FDP) is a duty period during which a pilot reports to perform flying. It begins when the pilot reports for duty with the intention of performing flying and **ends when the aircraft is parked after the last flight segment (block-in) and there is no intention for further aircraft movement by the same pilot.** An FDP includes deadhead transportation, training and preflight duties, if they occur before a flight segment without an intervening required rest period. An FDP also includes any other required tasks performed by the pilot, such as reporting to the CPO, or performing alcohol testing prior to flying.

The maximum length of an FDP depends upon a number of factors, including time of report, crew complement (2, 3, or 4 pilots), number of legs scheduled to be flown (for an unaugmented crew), the pilot's acclimation status, and the type of on-board rest facility (for an augmented crew). It does NOT depend upon whether the operation is domestic or international.

FDP limits are both scheduling limits and actual limits. A pilot may not depart on a flight if it will cause them to exceed their FDP limit (as extended, if applicable).

Note: An FDP limit may be extended under certain circumstances. Please refer to the section titled "FDP Limit Extensions" below for the conditions under which the limits may be extended.

FDP Limits—Unaugmented Crew

To determine the FDP limit for an unaugmented operation, a pilot enters Table B (see below) at the time of report, using the local time as follows (for FDPs remaining in the continental United States, use reporting domicile time):

- A pilot who is acclimated to a theater encompassing that FDP starting point should use the local time of that FDP starting point.
Exception: If that FDP starting point is within 60 degrees longitude of their base, they should use base time.
- A pilot who is not acclimated to a theater encompassing that FDP starting point should use the local time at the location where they most recently became acclimated.

They then move to the column corresponding to the number of scheduled flight segments in that FDP to determine their FDP limit. Scheduled deadhead segments are not counted in the number of segments. If they are not acclimated to a theater encompassing that FDP starting point, they subtract 30 minutes from the FDP limit shown. **Remember, the FDP ends at block-in, not release.**

If a pilot is rerouted to remove or add flying segments to their FDP, the rerouted schedule must comply with the limitations in Table B as if it were an original schedule. The new number of flight segments and the original report time will be used to determine the new FDP limit.

TABLE B TO PART 117: Flight Duty Period: Unaugmented Operations

Scheduled Time of Start (Acclimated Time)	Maximum Flight Duty Period (Hours) for Lineholders Based on Number of Flight Segments						
	1	2	3	4	5	6	7+
0000-0359	9	9	9	9	9	9	9
0400-0459	10	10	10	10	9	9	9
0500-0559	12	12	12	12	11.5	11	10.5
0600-0659	13	13	12	12	11.5	11	10.5
0700-1159	14	14	13	13	12.5	12	11.5
1200-1259	13	13	13	13	12.5	12	11.5
1300-1659	12	12	12	12	11.5	11	10.5
1700-2159	12	12	11	11	10	9	9
2200-2259	11	11	10	10	9	9	9
2300-2359	10	10	10	9	9	9	9

Note: If you are not acclimated, the above times are reduced by 30 minutes.

FDP Limits—Augmented Crew

To determine the FDP limit for an augmented operation, a pilot enters Table C (see below) at the time of report, using the local time as follows (unless you have had a 36-hour or longer layover or have been in theater for 72 hours—use reporting domicile time):

- A pilot who is acclimated to a theater encompassing that FDP starting point should use the local time of that FDP starting point.
Exception: If that FDP starting point is within 60 degrees longitude of their base, they should use base time.
- A pilot who is not acclimated to a theater encompassing that FDP starting point should use the local time at the location where they most recently became acclimated.

They then move to the column corresponding to the type of rest facility and number of pilots scheduled in that FDP to determine their FDP limit. If the FDP includes flight segments with different crew complements and/or types of rest facility, they use the most restrictive FDP limit. If they are not acclimated to a theater encompassing that FDP starting point, they subtract 30 minutes from the FDP limit shown. Remember, the FDP ends at block-in, not release.

Note: Delta is authorized to operate certain 4-pilot 350 flights under a Fatigue Risk Management System (FRMS). The FRMS is part of Delta's Ops Specs and is regulatory. If Delta has designated an FDP to be operated under the FRMS, the FAR FDP limit for that FDP is 20.5 hours. This limit may be extended up to two hours by mutual concurrence between the pilots and the dispatcher.

TABLE C TO PART 117: Maximum Flight Duty Period Limits for Augmented Operations

Scheduled Time of Start (Acclimated Time)	Maximum Flight Duty Period (Hours) Based on Rest Facility and Number of Pilots					
	Class 1 Rest Facility		Class 2 Rest Facility		Class 3 Rest Facility	
	3 Pilots	4 Pilots	3 Pilots	4 Pilots	3 Pilots	4 Pilots
0000-0559	15	17	14	15.5	13	13.5
0600-0659	16	18.5	15	16.5	14	14.5
0700-1259	17	19	16.5	18	15	15.5
1300-1659	16	18.5	15	16.5	14	14.5
1700-2359	15	17	14	15.5	13	13.5

The A330-300/900 may operate up to 13 hours with a four-man crew using the installed Class 1 rest facility and a Class 2 rest facility—a Delta One seat equipped with the same noise and light protective curtain previously used on the A330-300. For these operations, crews will be limited to the applicable

FDP limit for a four-man crew and Class 2 rest facility. If there is a fourth pilot completing OE on a 330 with a single bunk no class 2 seat, use four pilot class 3 rest for all duty period calculations.

330 and 767-400 TOE and Rest Class Change with Four Pilots

The 330-300 series and 765 crews face a unique situation when OE/TOE is being conducted because the OE pilot is not fully qualified and cannot sit in a control seat without an LCP in the other control seat. As a result, Training Planning cannot release the senior relief pilot for a transoceanic flight segment(s). Other fleets have OE on domestic prior to conducting TOE or have two bunks retaining the FAR 117 Rest Classification. Since the 330-300 and 765 do not have dual bunks, the Rest Facility Class changes for transoceanic flight segments with four pilots.

WARNING:

Having a fourth pilot changes *which* FAR 117 Table C column to use and changes the Rest Facility Class available for the 765 and 330-300 series. *With four pilots, all pilots are reduced to the lowest class of rest available.* It is critical that prior to departure the proper rest class and duty limits are referenced so that individual LATT times are accurate. Listed below are the aircraft and rest Class for TOE. Compare your rotation at sign in against the descriptions below and make sure they match. *If there is a discrepancy someone on the crew **MUST Contact Crew Scheduling and request the "pilot count" be updated on the specific flight segment(s).***

The new 330-302 (with the center fuel tank) has an additional rest facility designated (Seat 2A) with a curtain in addition to the below deck bunk.

FDP Limits When TOE Is Being Conducted

765

The designated Crew Rest Facility is a Delta One seat (9A) with a curtain, making it a Class 2 rest facility. With the addition of a TOE pilot, the additional rest facility is a Delta One seat (9D) without a curtain, which constitutes a Class 3 Rest Facility. As a result, all pilots are reduced to Class 3 FDP limits when TOE is being conducted. This will reduce pilot FDP limits and should be carefully monitored during delays or divers. ***If TOE is being conducted and the rest class on your rotation reflects Class 2 with a fourth pilot on board - the FDP limits are incorrect.***

330-200

If the Bulk Cargo Crew Rest (BCCR) is fully operable, the 330-200 always has a Class 1 Rest Facility because of the dual bunks contained in the BCCR. Conducting TOE does not affect the FDP limits of a flight segment. Your rotation should reflect Class 1.

330-323

The Lower Deck Mobile Crew Rest (LDMCR) has a bunk making it a single pilot Class 1 Rest Facility. With the additional TOE pilot, the additional rest facility is a Delta One seat (2A) without a curtain, which constitutes a Class 3 rest facility. As a result, all pilots are reduced to Class 3 FDP limits when TOE is being conducted. Changing from a Class 1 rest facility to a Class 3 facility will have a significant impact on FDP limits and **MUST** be monitored carefully, particularly during delays or divers! ***IF TOE is being conducted and the rest class on your rotation reflects Class 1 - the rotation FDP limits are incorrect.***

330-302 (center tank)

The LDMCR has a bunk making it a *single pilot* Class 1 rest facility. A curtain has been installed around seat 2A for use when a relief crew is required on flight segments between 12-13 hours. If the aircraft is used with 3 pilots the FDP limits will be based on a Class 1 rest facility. When TOE is being conducted on a 330-302 with four pilots, the FDP limits will be operated as a Class 2 rest facility. ***IF TOE is being***

conducted and the rest class on your rotation reflects Class 1 - the rotation FDP limits are incorrect.

Conclusion

The automation updating rest class is a two-step process. The first step is having the proper pilot count for the flight segment(s) and the second occurs when an aircraft is assigned to a specific flight segment. The computer knows the rest class available for every ship in the system and will then automatically update the rotation based on the available rest facility including an inoperative rest facility.

The computer is *not* programmed to recognize the TOE pilot as a qualified pilot working the transoceanic flight segment(s) which would automatically update the pilot count. This is a manual process within Flight Operations. When TOE is being conducted on transoceanic flight segments, it is critical the 'pilot count' is updated to reflect 4 pilots. With the change in pilot count, the computer will update to reflect the proper rest class. You know this has been completed with the change in rest class as described above.

Maintenance only assigns ships to a specific flight segment approximately three days in advance. This means on rotations greater than three days you will need to review your rotation on day four (and beyond) in iCrew to make sure the rest class status is accurate.

WARNING:

When you are a crew member operating with TOE being conducted, it is **critical** the rotation reflects the proper rest class and duty limits. All of the computer driven LATT times will **ONLY** be accurate if the rest class is accurate. This becomes extremely important when encountering delays or diversions. ALPA strongly recommends, prior to departure, to make sure the rotation information is accurate so the computer generated LATT times are correct. **Contact Crew Scheduling to update the pilot count.**

FDP Examples

Example 1: A DTW based pilot is acclimated to DTW when they report for an unaugmented rotation at 0800E. Their first duty period includes two flying legs followed by one deadhead segment.

Result: The pilot's maximum FDP, per Table B, is 14 hours and they must be scheduled to block in from the second flying leg not later than 2200E. The pilot's actual block-in time may not be later than 2200E unless the FDP limit is extended by mutual consent between the Company and the pilots. (Please refer to the section below titled FDP Limit Extensions.) The FAR does not consider or limit the deadhead segment or any other duty after block-in of the second flying segment.

Example 2: After the first flying segment in Example 1, the pilot is rerouted and the new schedule replaces the deadhead segment with three flying segments, for a total of five flying segments.

Result: The new FDP limit is 12.5 hours, based on the original report time of 0800E and five flying segments. The pilot must be scheduled to block in on the fifth flying segment no later than 2030E.

Example 3: A SEA based pilot flies from SEA to NRT as part of an FDP and then receives 24 hours of rest in NRT. After their rest, they report at 1200 local time for an unaugmented FDP containing two segments of inter-Asia flying.

Result: The pilot changed theaters upon arrival in NRT. They were not in NRT for 72 hours and did not receive 36 consecutive hours free from duty, so they are not acclimated in NRT. They must use SEA local time to determine the FDP limit for the inter-Asia FDP, and subtract 30 minutes from the value in Table B. They would enter the chart with a report time of 2000 (SEA time). For two flight

segments, their FDP limit would be 11.5 hours.

Example 4: After block-in of a pilot's last flight segment, the station manager asks them to reposition the aircraft to another gate.

Result: The time spent in repositioning counts as part of the FDP. The FDP ends when the aircraft stops with no further intention of movement by the pilot.

Example 5: A pilot is scheduled for four flight segments, but during the FDP a diversion is necessary on the fourth segment. After the diversion, they continue to their original destination.

Result: The continuation flight to the original destination is not considered to change the number of flight segments and does not change the FDP limit. The continuation flight must be completed within the original FDP limit from Table B.

Example 6: A pilot's flight is cancelled before takeoff and they return to the gate.

Result: That segment does not count as a flight segment.

Example 7: A pilot is scheduled for an unaugmented FDP. After the FDP has begun, the Company wishes to extend the FDP limit by adding an additional pilot to the crew to the last flight segment and changing the crew complement to 3 pilots.

Result: The FDP limit cannot be increased by augmenting the crew after the FDP has begun.

Example 8: The Company wishes to change the report time after a scheduled layover due to a delayed inbound aircraft.

Result: FDP limits are determined by scheduled reporting time and not by actual reporting time. If the Company can give a pilot at least 10 hours' notice of the change to their report time, then their FDP limit will be based upon their new scheduled report time. Otherwise, they will be treated as though they began a short call period at their original report time (for FAR purposes only). The time between their original report time and their new report time will be considered a RAP. FAR Part 117 limits the combined total number of hours that the pilot may spend in a RAP and their first FDP to the lesser of:

- Report time plus FDP limit from Table B or Table C, OR
- The start of the RAP, plus Table B value plus four hours not to exceed 16 hours (unaugmented crew) Table C value plus four hours (augmented crew).

Cumulative FDP Limits

Delta may not schedule, and a pilot may not accept an assignment if it will cause their total FDP hours to exceed:

- 60 FDP hours in any 168 consecutive hours (this is a rolling 168 hours, which is equivalent to seven 24-hour periods), or
- 190 FDP hours in any 672 consecutive hours (this is a rolling 672 hours, which is equivalent to 28 24-hour periods).

These cumulative FDP limits apply to all operations, augmented and unaugmented. These are both scheduling and actual limits that cannot be exceeded. Prior to takeoff, if the flight will cause the cumulative FDP limits to be exceeded, the takeoff is not permitted. After takeoff, the cumulative FDP limits may be exceeded only to the extent necessary to enable an aircraft to land at the destination or alternate airport. Please refer to the section titled "FDP Limit Extensions" below for the conditions under which an FDP limit may be extended.

Comprehensive Examples

Example 1: An ATL based pilot is acclimated to ATL and flies the following rotation:

#P575 WE		EFFECTIVE JAN. 01 ONLY				CHECK-IN AT 15.35			
POS - A,B						SKED ON-DUTY			
DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	DTY/MAX
A DH	2055	ATL 1635	LAX 1840	5.05	76S	0.00/	0.00	6.35/11.43	
						5.05DHD			
		LAX 15.19/WESTIN BONAVENTURE				.00/17.00	.00CRD	5.05TL	
B	283	LAX 1159	NRT 1655	11.56	777 M	13.26/16.00		13.56/14.00	
		NRT 24.15/RADISSON HOTEL NRT				11.56/13.00	.00CRD	11.56TL	
D	283	NRT 1840	BKK 2355	7.15	M	8.15/ 8.30		8.45/10.40

						2.33DHD			
						.00/17.00	.00CRD	2.33TL	
						9.44TRP	.00DPA	.00ADG	
TOTALS---53.08TL 35.46BL 17.22CR 40.46FDP									TAFB 185.58

Result:

- The pilot remains acclimated to ATL and uses ATL local time to determine their limits for B-day from LAX to NRT. The FDP limit for B-day is 16 hours (based on a report time of 1329E, a three-pilot crew and a Class I facility.)
- The pilot changes theatre upon arrival in NRT.
- The pilot is unacclimated in NRT on D-day. They use ATL local time to determine their FDP limit for D-day because ATL was the location where they most recently became acclimated. They subtract 30 minutes from the charted limit because they are not acclimated in NRT. The pilot does not change theater on arrival in BKK, because BKK is within 60 degrees longitude of NRT.
- Upon receiving 36 hours free of duty in BKK, the pilot becomes acclimated to BKK.
- The pilot starts their FDP on G-day using BKK local time to determine their FDP limits for G-day and do not subtract 30 minutes from the charted limit because they are now acclimated.
- The pilot continues on H-day, using BKK local time to determine their FDP limits for H-day. However, H-day is an FRMS flight, and the FDP limit is 20.5 hours, regardless of start time.
- The pilot changes theatre upon arrival in MSP.
- I-day of this rotation is not an FDP and is not limited by the FARs. On arrival in ATL, the pilot must receive a minimum of 56 hours of rest, and the rest must be extended to 0700 to encompass three physiological nights referenced to ATL time. The total rest required is 69:27. Upon completion of the rest, the pilot will be acclimated to ATL.

Example 2: A SEA-based pilot is acclimated to SEA and flies the following rotation:

#A008 TU		EFFECTIVE JAN. 07 ONLY				CHECK-IN AT 6.20			
POS - B						SKED ON-DUTY			
DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	DTY/MAX
A DH	418	SEA 0720	JFK 1527	5.07	757	0.00/	0.00	6.37/12.40	
						5.07DHD			
		EWB 24.58/ROOSEVELT HOTEL				.00/17.00	.00CRD	5.07TL	
B	078	EWB 1825	AMS 0750	7.25	332 M	8.55/15.00		9.25/14.00	
		AMS 24.10/NH GALAXY				7.25/13.00	.00CRD	7.25TL	
D	179	AMS 1000	PDX 1120	10.20	M	11.50/13.30		12.20/14.00	
		PDX 24.05/HILTON DTWN PDX				10.20/13.00	.00CRD	10.20TL	
E	178	PDX 1325	AMS 0830	10.05	M	11.35/16.30		12.05/14.00	
		AMS 48.40/NH GALAXY				10.05/13.00	.00CRD	10.05TL	
H	231	AMS 1110	BOS 1320	8.10	3L3 M	9.40/16.30		10.10/14.00	
		BOS 27.20/PARK PLAZA				8.10/13.00	.00CRD	8.10TL	
I	230	BOS 1840	AMS 0740	7.00	M	8.30/13.30		9.00/14.00	
		AMS 27.25/NH GALAXY				7.00/13.00	.00CRD	7.00TL	
K	033	AMS 1305	ATL 1658	9.53	332 M	11.23/16.30		11.53/14.00	
		ATL 15.18/AT PILOT REQUEST				9.53/13.00	.00CRD	9.53TL	
L DH	1929	ATL 0946	SEA 1219	5.33	739	0.00/ 0.00		7.03/12.23	

Result:

- The duty period on B-day uses SEA local time to determine the FDP limits and not subtracting 30 minutes from the Table C Values. For Table C, use 3 pilots, Class 2 rest facility, and 1355 report (SEA time).
- Because the pilot is not acclimated in AMS on D-day, they must use SEA local time (the location at which they most recently became acclimated) to determine their FDP limits and subtract 30 minutes from the value in Table C.
- On E-day, because the pilot never became acclimated to a new theater and returned to a theater in which they were already acclimated, and because the starting point is within 60 degrees of SEA, they use SEA local time to determine their FDP limit and do not subtract 30 minutes from the Table C value.
- On H-day, the pilot is acclimated to AMS because they received a minimum of 36 consecutive hours free from duty. The pilot uses AMS local time to determine their FDP limit and does not subtract 30 minutes from the Table C value.
- On I-day, because the pilot is not acclimated to BOS, they use AMS local time (the location at which they most recently became acclimated) to determine their FDP limit and subtract 30 minutes from the Table C value.
- On K-day, because the pilot never became acclimated to a new theater and returned to a theater in which they were already acclimated, they use AMS local time to determine their FDP limits. They do not subtract 30 minutes from the Table C value.
- The deadhead only duty period on L-day is not an FDP and not limited by the FARs. On arrival in SEA, because the pilot traveled more than 60 degrees longitude and was away from base for more than 168 hours, the pilot must receive a minimum of 56 hours of rest, and the rest must be extended to 0700 to encompass three physiological nights referenced to SEA time. The total rest required is 66:11. Upon completion of the rest, the pilot will be acclimated to SEA.

FDP Limit Extensions

There are two types of FDP limit extensions permitted:

- A pre-takeoff extension of up to two hours due to unforeseen operational circumstances that arise prior to takeoff can be made if the Captain and the dispatcher agree that the crew is fit and the flight can be safely operated if the FDP is extended. A pre-takeoff extension of more than 30 minutes can be granted only once before a pilot receives a 30-hour rest period. A pre-takeoff FDP limit extension may not exceed two hours and may not cause a pilot to exceed their cumulative FDP limits.
- A post-takeoff extension of a pilot's FDP limit is allowed when unforeseen operational circumstances arise after takeoff, if the Captain and the dispatcher agree. The limit may be extended to the extent necessary to safely land the aircraft at the next destination or alternate airport, as appropriate. A post-takeoff extension may exceed a pilot's cumulative FDP limits. However, once the aircraft has landed at its destination or alternate airport, the same conditions outlined above for a pre-takeoff extension apply to any subsequent flying. That is, once on the ground, the applicable FDP limits (including cumulative limits) apply. A post-takeoff extension of more than 30 minutes can be granted only once before a pilot receives a 30-hour rest period.

Pilot concurrence is required by the FARs for all FDP limit extensions, even if the FDP limit extension is only for another pilot on the crew. The PWA requires concurrence from all crewmembers. Pre-takeoff FDP limit extensions can be for any specific amount of time up to two hours. Delta must keep a record of the pilot's concurrence and report all FDP limit extensions over 30 minutes to the FAA. The FOM will contain specific details on the acceptance of an extension.

Note: If Delta has designated an FDP to be operated under the FRMS, the FDP limit is 20.5 hours. The FDP may be extended up to two hours by mutual concurrence between the pilots and the dispatcher.

Reserve Rules

A reserve availability period (RAP) is the period of time a reserve pilot spends on short call (SC) prior to report of an assigned FDP. This time must be accounted for when determining the reserve's maximum flight duty period.

When a short call reserve pilot is assigned a rotation, they do not accrue FDP hours until they report for the FDP. The time spent during their RAP does not count as FDP time. FAR Part 117 limits the combined total number of hours that the pilot may spend in a RAP and their first FDP *to the lesser of*:

- Report time plus FDP limit from Table B or Table C, OR
- The start of the short call, plus Table B value plus four hours not to exceed 16 hours (unaugmented crew) or Table C value plus four hours (augmented crew)

The FDP time can be extended beyond its Table B or C limit, so long as the combined RAP + FDP do not exceed the limits set forth above. Any such extension requires concurrence of the pilots and the dispatcher.

Reserve Examples

Example 1: A 320 pilot begins a RAP at 0900, is called at 1030 and assigned a rotation. The rotation begins with a three-segment FDP and a report time of 1230.

Result: The pilot's RAP begins at 0900 and ends at 1230 when they report for the FDP. The pilot's FDP begins at 1230 and they begin accruing FDP time at 1230. Per Table B, the maximum FDP is 13 hours. The maximum combined RAP + FDP is the lesser of Table B plus four hours (17 hours) or 16 hours. Thus, the FDP must end (block-in) no later than 0100 (16 hours after the RAP began at 0900). This pilot requires 30 continuous hours free of duty during the 168 hours preceding 0900 and also during the 168 hours preceding 1230. They also require ten hours of rest immediately preceding 0900.

Example 2: An ATL 7ER pilot begins a RAP at 1200, is called at 1500 and assigned a rotation. The rotation report time is 1800. The first FDP includes one segment, ATL-MUC, scheduled to depart at 1930 with a scheduled block-in time of 0500 (ATL time).

Result: The pilot's RAP begins at 1200 and ends at 1800 when they report for the FDP. The pilot's FDP begins at 1800 and they begin accruing FDP time at 1800. Per Table C, the maximum FDP is 14 hours. The maximum combined RAP + FDP is Table C plus four hours (18 hours). Thus, the FDP must end (block-in) no later than 0600 ATL time (18 hours after the RAP began at 1200.) This pilot requires 30 continuous hours free of duty during the 168 hours preceding 1200 and also during the 168 hours preceding 1800. They also require ten hours of rest immediately preceding 1200.

Example 3: The flight segment in Example 2 is scheduled to block-in at 0500 (ATL time). Due to a 1:30 maintenance delay prior to pushback, the new anticipated block-in time is 0630 (ATL time).

Result: The flight may not take off because the pilot in Example 3 will exceed the maximum FDP plus RAP limit.

Report Time Changes

If you are notified prior to report that your departure time and your report time are delayed, you will be in one of three situations.

1. You do not acknowledge the notification until at or after the original report time. In this case, you have reported and begun your FDP. The Company cannot change the report time. They could end the FDP, give you another 10-hour rest period, and schedule you for a new FDP. If the new FDP infringes on your WOCL, the FAR requires 12 hours' notice. Your WOCL is defined as 0200-0559 acclimated time. **Note: PWA break in duty requirements may be more restrictive and would apply prior to any new duty period. (Refer to PWA Section 12 G.)**
2. You acknowledge the new report time 10 hours or more prior to the new report time. In this case, you will use the new report time as the start of your FDP and you will be in rest for a

minimum of ten hours prior to the new report time. Apply Table B or Table C using the new report time to determine your FDP limit. If the new FDP infringes on your WOCL, the FAR requires 12 hours' notice.

3. You acknowledge the new report time prior to the original report time and less than ten hours prior to the new report time. If, in your opinion, your sleep opportunity was interrupted, notify the Company. You will need an additional 10 hours of rest prior to beginning any FDP. If your sleep opportunity was not interrupted, you will treat the original report time as if it were the start of a short call period, for FAR purposes only. The time between the original report time and the new report time will be considered a RAP under the FAR. You will use the new report time as the start of your FDP, and you will use that time to enter Table B or Table C. Your FDP must end no later than the earlier of:
 - New report time plus FDP limit from Table B or Table C
 - Original report time plus:
 - Table C value plus four hours, including extensions (augmented crew)
 - Table B value plus four hours, including extensions, not to exceed 16 hours max (unaugmented crew)

Example 1: A pilot on an unaugmented crew is scheduled for an FDP reporting at 1000 with two flight segments. Their FDP limit per Table B is 14 hours. They are contacted by the Company at their scheduled pickup time at the hotel and told their flight is delayed, their new report time is 1230, and the new departure time is 1330.

Result: The pilot did not receive 10 hours of rest between the acknowledgement of the change and the new report time, so they are treated as if they began a short call period at the original report time of 1000. Their FDP begins at 1230. Their FDP must end no later than the earliest of:

1. their new report time plus their new FDP limit
 - (13 hours after 1230 = 0130), or
2. their original report time plus their new FDP limit plus four hours (including extensions)
 - (17 hours after 1000 = 0300), or
3. their original report time plus 16 hours (applies to unaugmented operations only)
 - (16 hours after 1000 = 0200).

The earliest of these three times is 0130 and this FDP must be scheduled to end no later than 0130.

Example 2: The crew in Example 1 reports per the amended schedule at 1230. They discover a mechanical on the aircraft that will cause a delay.

Result: By concurrence between the dispatcher and the pilots, the no later than limits from bullets 1 and 2 above may be extended up to two hours, not to exceed the 16-hour limitation in bullet 3 above or the FDP + 4 in bullet 2 above. The FDP must now end no later than 0200.

PWA FDP Limits (12 D.)

PWA Max Scheduled FDP

- 30 minutes less than the value derived from FAR Tables B and C
Exception: The maximum unaugmented PWA FDP limit is 13:00
 - This further restricts an FDP scheduled with one or two flight segments that reports 0700 - 1159, pilot acclimated time
 - A pilot on such an FDP may not be scheduled or rerouted to remain on duty in excess of 13:00
 - Such an FDP may be extended to no more than 16:00 with prior consent of the pilot
- Deadhead legs count toward the number of flight segments when entering Table B or C, as appropriate
- Non-transoceanic duty periods including any Reserve Availability Period (RAP) will be further restricted to not exceed 17 hours.

PWA Max Actual FDP

The value derived from the FAR Table B (not to exceed 13:00) or C

- For report time use the local time for the city to which the pilot is acclimated.
- If pilot is not acclimated to a theater encompassing that FDP starting point, they subtract 30 minutes from the FDP limit shown.
- If a pilot is rerouted to remove or add flying segments to their FDP, the rerouted schedule must comply with the limitations in the tables.
Exception: The maximum unaugmented PWA FDP limit for a reroute is 13:00
- If a flight diverts prior to reaching its destination, the continuation flight to the original destination is not considered to change the number of flight segments and does not change the FDP limit.

PWA Max Actual FDP Without Extension

A pilot will not be rerouted to remain on an FDP in excess of the applicable limit in Table B (not to exceed 13:00) or C

Max Duty Period for an FDP Followed by a DH

Scheduled: 30 minutes less than the time shown in FAR Table B (not to exceed 13:00) or C

Actual: one hour beyond the scheduled limit.

Max Duty Period for DH Only Duty Periods

Scheduled: 30 minutes less than the limit shown in FAR Table B (not to exceed a maximum of 13 hours) or C appropriate to the crew(s) operating the deadhead flight(s), as though the deadheading pilot were operating the single longest deadhead flight segment in the duty period, measured from report to block-in of the last flight segment

Actual: A pilot will not be rerouted or required to remain on duty more than one hour beyond the scheduled limit. DH-only duty periods may be extended indefinitely with pilot concurrence.

Examples of Duty Limits when Deadheading

FDP that Includes a Deadhead Other than the Last Flight Segment

PWA Scheduling & Extendable Limits; scheduling limit increases by 30 minutes after report to reflect reroute limit

FAR Scheduling & Extendable Limits

Under FAR 117, this FDP (which reports at 0930 pilot acclimated time, as the pilot is acclimated to LGA) is considered to have two flight segments and a limit of 14:00, extendable to 16:00. (See Table B to Part 117 below.) A pilot may be scheduled and/or rerouted to 14:00 and may elect to extend their FDP up to 16:00 (highlighted in red above).

However, the PWA counts the deadhead as a flight segment, making the contractual FDP limit only 13:00, extendable to 15:00 (highlighted in cyan above). Prior to report, the FDP may be scheduled to a maximum of 12:30, and the pilot may be rerouted only up to 13:00 and may only choose to extend their FDP up to 15:00. While not an FAR violation, rerouting a pilot beyond 13:00 or allowing them to extend beyond 15:00 would violate the PWA. (Being rerouted beyond the unextended FAR 117 limit of 14:00 would also violate FAR 117.)

PWA Duty Period and Scheduling & Actual Limits (apply to entire duty period)

FAR 117 FDP and Block Time Limits (apply only to flying leg)

Under FAR 117, and assuming it is flown as scheduled, this FDP ends upon arrival in SLC at 1015, for a total length of 6:25 (0550E - 1215E). There is no limit to the amount of time the pilot can subsequently deadhead, so long as they receive the applicable rest thereafter.

The PWA requires that the entire duty period, including the trailing deadhead flight, be scheduled to be within 30 minutes of the FDP limit, as determined using an 0550 acclimated report and two flight segments in Table B. That is, it must be scheduled to block in no later than 11:30 after the 0550 report, or 1720E. The total duty period, measured from report to scheduled block in, is 9:22 as currently scheduled.

The pilot may not be rerouted or required to depart from the gate on a deadhead flight that is scheduled to block in more than 12:30 after their 0550 report, or 1820E. While not an FAR violation, rerouting a pilot beyond 12:30 or requiring them to remain on duty beyond that point would violate the PWA.

Duty Period and PWA Scheduling & Actual Limits

FAR Duty & Block Time Limits (none for deadheading)

Because this leg would have been operated by a three-person crew using a Class 1 rest facility, the PWA duty period limit is 30 minutes less than the 16:00 FAR limit under Table C for such a crew and rest facility reporting at 1515 acclimated time.

With a report of 1545 and a PWA scheduled duty period limit of 15:30, the deadhead flight must be scheduled to block in no later than 00715E. The pilot may not be rerouted or required to depart from the gate on a deadhead flight that is scheduled to block in more than 16:30 after their 1545 report, or 0815E. While not an FAR violation, rerouting a pilot beyond 16:30 or requiring them to remain on duty beyond that point would violate the PWA.

Now consider the following deadhead-only duty period containing two deadhead legs:

5 D2267	*SFO	1559	LAX.1727	1.28	0.03	2.02	3118	2

5.37/11.30/12.30

0.00/ 0.00/ 0.00

Duty Period and PWA
Scheduling & Actual
Limits

FAR Duty & Block Time Limits
(none for deadheading)

Because the single longest leg in this duty period (SFO - LAX) would have been operated by a two-person crew, the PWA duty period limit is 30 minutes less than the 12:00 FAR limit under Table B for such a crew reporting at 1759 acclimated time (note that the crew is acclimated to JFK).

With a report of 1459 local time and a PWA scheduled duty period limit of 11:30, the last deadhead flight must be scheduled to block in no later than 0229 local time. The pilot may not be rerouted or required to depart from the gate on a deadhead flight that is scheduled to block in more than 12:30 after their 1459 report, or 0329. While not an FAR violation, rerouting a pilot beyond 12:30 or requiring them to remain on duty beyond that point would violate the PWA.

FRMS Duty Period Limits

An FRMS duty period may be scheduled to the FAR FRMS FDP limit of 20:30. A pilot will not be rerouted or required to remain on duty more than two hours longer than originally scheduled. If their flight is delayed beyond the two-hour point, they may remove themselves from the FDP for any reason.

Max Duty during Reroute and Delays

Pilots may not be rerouted beyond their applicable FDP limit. If the crew and the dispatcher agree, they may be extended due to a rolling delay (but not rerouted) up to two hours beyond such limit in most cases. In the case of an unaugmented FDP with one or two flight segments that reports 0700 - 1159, pilot acclimated time, the PWA FDP limit is 13:00, but the pilot may agree to extend their FDP up to 16:00.

In a reroute situation, Crew Tracking will use the best times available to construct revised schedules. For flights that have been completed, the actual times will be used. For a flight currently being flown, the enroute times will include known delays forwarded by Flight Control to Crew Tracking. Bid package scheduled times will be used for future flights.

However, if the dispatch release has been issued for a future flight and total block time has been determined to be *greater* than that of the bid package block time, then that increased block time will

be used for the flight segment. While minutes under schedule may appear for a future leg(s) after a flight plan is filed, the *greater* of the scheduled time or the dispatch release block time (if known) will be used to compute the scheduled duty time. Reasonable turn times between future flight segments, not to be less than 30 minutes, shall also be used in determining the scheduled duty time.

During an active RR situation, Tracking may use the full FDP limit contained in **Section 12 D. 2**. The limitation to schedule rotations 30 minutes less than FDP limits is for rotation construction and does not apply during RRs.

Section 12 D. 5.

It is within the sole discretion of each individual pilot to decide in any given situation whether they are fit for duty and will remain on duty beyond their applicable FDP or duty period limit. A pilot's decision not to remain on duty beyond such limit will be accepted without challenge by Crew Tracking.

Rest Requirements and Break in Duty Requirements

There are two sets of rules to consider regarding time between duty periods:

- PWA Break in Duty Requirements
- FAR Rest Requirements

In every case, the most restrictive rules apply.

Rest, as defined by the FAA, means having no present responsibility for work. Time spent on long or short call or performing any duty for Delta (e.g., DH) is not rest. A pilot cannot be made to call the Company or answer a phone call during a rest period, although they can voluntarily answer a call or make contact with the Company. Also, a pilot on a layover is not required to respond to an attempted contact by the Company.

A break in duty for PWA purposes is the time between release from one duty period and report for the subsequent duty period.

It is up to each individual pilot to judge their need for rest and inform Crew Tracking of their decision concerning the rest they require.

FAR Rest Requirements

This section describes FAR rest requirements. Please also refer to the section labeled “PWA Break in Duty Requirements” and remember that the most restrictive rules apply.

FAR Part 117 includes four rest requirements:

1. **“30-in-168”** Before beginning any reserve availability period (RAP) or FDP, a pilot must have received at least 30 consecutive hours free of duty within the 168 consecutive hours (seven 24-hour periods) immediately preceding the start of the RAP or FDP.
2. **“10 before beginning”** Before beginning any RAP or FDP, a pilot must have received at least ten hours of rest with a minimum of eight uninterrupted hours of sleep opportunity. A sleep opportunity generally commences once the pilot is at a location where they can reasonably be expected to go to sleep and not have that sleep interrupted, such as a hotel.
Exception: A pilot who is on short call does not have to receive ten hours of rest prior to beginning an FDP that starts during their short call period.
3. **“56 upon release”** If a pilot travels more than 60 degrees longitude in a rotation that requires them to be away from base for 168 hours or more, they must be given at least 56 consecutive hours of rest upon their release from the rotation. This rest must encompass three physiological nights based on local time (i.e., the hours of 0100 and 0700 pilot base time) and must be extended as necessary to encompass the three nights.
4. **“Rest after Deadhead”** If a pilot is engaged in deadhead transportation that exceeds the applicable FDP limit in Table B of FAR Part 117, using the column in the chart that corresponds to the number of deadhead segments, the pilot must be given a rest period equal to the length of the deadhead transportation (but not less than ten hours) before beginning an FDP. (See Table B, and the explanation in the section titled “Required Rest after Deadhead” below.)

Although an FDP ends at block-in of the last flying segment, a pilot’s rest does not begin until they are released from duty, which is normally 30 minutes after block-in of the last segment, flying or deadhead.

During each required ten-hour rest period (#2 above), a pilot must determine whether they have received a minimum of eight consecutive hours of sleep opportunity. Any disturbance, such as a fire alarm, phone call from the Company, etc., requires them to determine whether their sleep opportunity has been interrupted. For example, some pilots may have no problem returning to sleep after hearing a fire alarm, while others may find it difficult to get back to sleep even if the interruption was short. A pilot who is unable to get back to sleep would be required to advise Crew

Tracking or Crew Scheduling that their sleep opportunity was interrupted. The rest period would no longer satisfy the requirement for ten hours of rest with eight hours of uninterrupted sleep opportunity, and the pilot's schedule would have to be adjusted as necessary.

The ten-hour rest period immediately prior to the start of an FDP or RAP cannot be reduced for any reason. A pilot may not be required to perform any task for the Company (including a schedule check, distributed training, phone obligation, etc.) during any required rest period. A pilot may voluntarily perform such tasks without interrupting the rest period. For example, a pilot may choose to perform their quarterly CQ distributed training during one of their layovers and it would not interrupt their rest.

The Company may attempt to call a pilot during a rest period. If the pilot voluntarily chooses to answer a phone call, the FAA does not view the phone call as disruptive and interrupting the rest period. However, the pilot's sleep opportunity may be interrupted. If the pilot determines that the phone call has interrupted their required sleep opportunity (i.e., they cannot get back to sleep), the pilot has an obligation to report this to the Company and their schedule must be adjusted as necessary. If multiple calls are made in attempt to contact a pilot, the pilot's sleep opportunity may be interrupted even if they do not answer the phone. Thus, Delta runs the risk of interrupting a pilot's sleep opportunity by making a phone call during a required rest period.

Rest must be prospectively known and assigned, which means the pilot must be notified of both the start time and duration of a scheduled rest period before the rest period begins. After a pilot begins an assigned rest period, that rest period cannot be extended by notification from the Company. For example, if the Company calls a pilot ten hours after they started a rest period originally scheduled for 24 hours to tell them their rest will end ten hours later than originally scheduled, that pilot is not considered to have received 34 hours of continuous rest. Instead, they are considered to have received 24 hours of continuous rest following the acknowledgement of the change. This requirement places certain restrictions on the Company's ability to change the start time of an FDP because a pilot must receive at least ten hours of rest immediately prior to the start of an FDP.

Reserve Rest

FAR Part 117 divides reserve duty into three categories - airport standby, short call reserve, and long call reserve. Unless the certificate holder specifically designates the reserve assignment as airport standby or short call, a pilot on call is a long call reserve pilot.

Rest Required Prior to Reserve

FAR Part 117 requires two basic rest periods for reserve pilots:

- A minimum of ten hours of rest immediately prior to the start of an FDP or RAP. The ten hours of rest must provide a minimum of eight hours of uninterrupted sleep opportunity. Note: The ten hours of rest prior to the start of an FDP is not required for an FDP that begins during a RAP.
- 30 consecutive hours of rest (free of duty) in the 168 hours immediately preceding the start of any FDP, RAP or airport standby reserve.

Long Call Reserve

FAR Part 117 requires that a long call reserve pilot must be given at least ten hours of rest prior to starting an assigned FDP or reserve availability period (RAP). The rest must be prospective in nature and begin no later than ten hours prior to the start of the FDP or RAP. If an FDP begins before and will intrude into a long call reserve pilot's WOCL (0200-0559 acclimated time), then the pilot must be given notice of the assignment at least 12 hours prior to report. The pilot's FDP limit is determined from the applicable FDP limit table (B or C) based on the report time for the rotation.

Short Call Reserve

A short call reserve pilot may be assigned an FDP without receiving 10 hours of rest immediately preceding the start of the FDP.

Required Rest after Deadhead

If a pilot is engaged in deadhead transportation that exceeds the applicable FDP limit in Table B (using the column in the chart that corresponds to the number of deadhead segments) the pilot must be given a rest period equal to the length of the deadhead transportation, but not less than ten hours, before beginning an FDP or a RAP. For the purposes of determining if this rest is required, a pilot's deadhead transportation should always be compared against the limit in Table B, even if it is part of an augmented duty period, and will be calculated as follows:

- For a deadhead segment or segments following a flying segment in the same duty period, the deadhead transportation will begin at the departure time of the first deadhead segment and end at the arrival time of the last deadhead segment.
- For a deadhead only duty period, the deadhead transportation will begin when the pilot is required to report for the first deadhead segment and end at the arrival time of the last deadhead segment.

Note that a pilot's rest does not begin until they are released from all duty, typically 30 minutes after block-in of the last segment (flying or deadhead.)

Example 1:

```

TOTALS---15.50TL 11.33BL  4.17CR 21.39FDP                TAFB 55.24
```

Result: On B-day, this pilot's FDP ends at 1528. Their deadhead transportation begins at 1625 (departure time of the first DH segment after the FDP) and ends at 1737 (arrival time of the last DH segment) for a total of 1:12. This does not exceed the limit in Table B for an FDP beginning at 1625 with one segment (12 hours) and does not trigger an additional rest requirement.

Note that the DH segment on flight 1458 is part of the pilot's FDP and not part of their "deadhead transportation" for this rule.

Example 2:

```
#A005 TU                EFFECTIVE JAN. 07 ONLY                CHECK-IN AT 16.15

TOTALS---18.33TL  8.30BL 10.03CR 10.00FDP                TAFB 46.48
```

Result: On C-day, this pilot's deadhead transportation begins at 0900L (report time of the DH only duty period) and ends at 1433L (arrival time of the last DH segment) for a total of 11:33. This exceeds the limit in Table B for an FDP beginning at 0300 (ATL time), unacclimated, with one segment (8.5

hours), and triggers an additional rest requirement of 11:33, to begin at 1503L (release time).

Note that the required rest is equal to the length of the “deadhead transportation,” but not less than ten hours.

In-Flight Rest Requirements—Augmented Operations

Requirements for in-flight rest for augmented crews.

- Two consecutive hours must be available in the second half of the flight duty period (not the second half of the flight) for in-flight rest for the pilot flying the aircraft during landing, and
- Ninety consecutive minutes must be available for in-flight rest for the pilot performing monitoring duties during landing.

For a three-pilot crew, the standard “middle break” may not meet the requirements of this rule. For a four-pilot crew, the strategy of resting for the first half and flying for the second half will not meet the requirements of this rule.

To determine the midpoint of an FDP with one flying segment, add the time from report to takeoff to the planned flight time plus the planned taxi-in time to determine the length of the FDP. Add half of that time to the report time to determine the midpoint of the FDP. The pilot landing should plan for a minimum of two consecutive hours of in-flight rest after that point. The pilot monitoring during landing should plan for a minimum of ninety consecutive minutes of in-flight rest any time during the flight. There are no FAR requirements for in-flight rest for the relief pilot (crew).

Delta has authorization to operate under FRMS Operation Specification A318, Authorization Number DALA-003, which allows a three-man crew to use the standard “middle break” rest plan, provided:

- The crew’s FDP limit is no more than 14 hours
- The landing pilot takes either the second or the third rest break
- The rest break taken by the landing pilot is at least 1:45 in length

Each crew must determine the best strategy for in-flight rest in order to comply with the regulations and ensure an alert and rested crew is operating the aircraft during landing.

Rest Facilities

FAR Part 117 provides specific requirements for the type of on-board rest facility used during augmented operations. The FAA certified the class of on-board rest facility on each of Delta’s aircraft. The MEL for each aircraft has been modified to include on-board rest facilities and the procedures to be followed if a rest facility or one of its components is inoperative.

Rest facilities are certified by the FAA with three classifications:

- *Class 1 rest facility* means a bunk or other surface that allows for a flat sleeping position and is located separate from both the flight deck and passenger cabin in an area that is temperature-controlled, allows the flightcrew member to control light, and provides isolation from noise and disturbance.
- *Class 2 rest facility* means a seat in an aircraft cabin that allows for a flat or near flat sleeping position; is separated from passengers by a minimum of a curtain to provide darkness and some sound mitigation; and is reasonably free from disturbance by passengers or flightcrew members.
- *Class 3 rest facility* means a seat in an aircraft cabin or flight deck that reclines at least 40 degrees and provides leg and foot support.

350 FRMS Rest Requirements

If Delta has designated an FDP to be operated under the FRMS, there are additional planned and minimum pre-duty rest requirements, according to the following table.

FRMS Operation	Planned/Minimum Pre Duty Rest
----------------	-------------------------------

ATL-JNB	24/18
JNB-ATL	48/40
0700-1659L from the U.S.	24/13
1700-0659L from the U.S.	24/20
Anytime to the U.S. (except from JNB)	24/20

The FRMS FDP must be scheduled to provide the planned pre-duty rest. If delays are encountered on the previous rotation or on the FDP prior to the layover, the rest may be reduced to the minimum pre-duty rest.

If any FDP in a rotation is operated under the FRMS, the pilot must receive a minimum of 56 hours of rest upon return to base, and the rest must include three physiological nights referenced to base time. In most cases, the rest will be greater than 56 hours and will end at 0700 at the end of the third physiological night.

PWA Break in Duty Requirements (12 G.)

There are two sets of contractual minimum break in duty criteria the Company must follow—one is for *scheduling* purposes (i.e., creating rotations and reroutes for pilots) and the other is for *actual* use once a rotation is under way. The required break varies according to the type of flying being performed and the combined length of the duty periods on either side of the break.

Note: The applicable break in duty may be higher for line construction purposes. (See **Section 23 D. 11.**)

Reroutes into revised layovers must be scheduled with the applicable contractual minimum *scheduled* break in duty. Upon arrival at the layover, *actual* minimum break-in-duty times apply. Under some circumstances, FAR required rest may exceed contractual minimum break.

A pilot's duty period will continue until they have received a break-in-duty as specified below. This may generate additional duty period credit (see "1 for 2" below).

Co-terminal layovers in which a crew arrives at one co-terminal and leaves from another (e.g., EWR arrival with a JFK departure) require the ground travel time listed in **Section 8 B. 3** to be added to the applicable minimum scheduled and minimum actual break in duty. The transportation to and from the layover hotel is not a deadhead and the pilot does not receive the pay described in **Section 8 B. 3.**

Contractual Break in Duty Table

Duty Period Type	Minimum Scheduled Break	Minimum Actual Break
Non-Trans-Oceanic	• Ten hours prior to duty period • 13 hours prior to duty period if reporting in: ◦ EWR after arriving in JFK or LGA at the end of the prior duty period, or ◦ JFK or LGA after arriving in EWR at the end of the prior duty period	• Nine hours fifteen minutes prior to duty period • 13 hours prior to duty period if reporting in: ◦ EWR after arriving in JFK or LGA at the end of the prior duty period, or ◦ JFK or LGA after arriving in EWR at the end of the prior duty period
Trans-Oceanic (Away From Base)	• 13 hours prior to duty period • 13 hours after duty period scheduled for 13 hours or less • 18 hours after duty period scheduled for more than 13 hours	• 11 hours prior to duty period (eight hours after non-ocean-crossing deadhead duty period) • 11 hours after duty period scheduled for 13 hours or less • 14 hours after duty period scheduled for more than 13 hours
Trans-Oceanic (In Base)	• 13 hours prior to duty period • 13 hours after duty period	• 11 hours prior to duty period (eight hours after non-ocean-crossing deadhead duty period) • 13 hours after duty period

Exception: The minimum break-in-duty for a pilot reporting for an FRMS duty period that follows the delay or cancellation of a prior FRMS duty period will be ten hours.

Notes:

1. If the pilot's release is at one co-terminal airport and their report is at another, applicable ground travel time under **Section 8 B. 3.** will be added to their scheduled break-in-duty.
2. The 13-hour minimum break-in-duty referenced for non-trans-oceanic duty periods in the table above refer only to layovers in the NYC area. It does not apply between

rotations.

3. See **Section 23 D. 11.** for additional minimum breaks in duty for purposes of line construction.
4. A pilot who completes a rotation may be required to fly the next scheduled rotation on their line, or a portion thereof, without first receiving such break-in-duty, provided that such flying can be accomplished within their maximum scheduled duty time under **Section 12 D. 2. - 4.**

“1 for 2”

In order to achieve an FAR-required rest period on a layover, Crew Tracking may delay a pilot's scheduled report time and reduce the time between the pilot's scheduled report and scheduled departure, *with the pilot's concurrence*, by up to 30 minutes without changing the departure time. However, the contractual break in duty for duty period credit purposes (“1 for 2”) will be based on an unreduced time. If the 30-minute slide will not achieve an FAR-required rest, then the departure must be delayed or the crew replaced.

It is up to each individual pilot to judge their need for rest and inform Crew Tracking of their decision concerning the rest they require.

Consecutive Layovers

- A pilot will not be scheduled for a domestic rotation containing consecutive layovers of less than 12:00
- This applies only to bid package rotations
- This does not apply to a rotation that contains an international operation

Flight Time Limits

Flight time commences when an aircraft moves under its own power for the purpose of flight and ends when the aircraft comes to rest after landing. Delta Air Lines has always applied a slightly different definition, approved by the FAA, which mirrors the PWA definition of block time. At Delta, flight time is the time beginning when an aircraft first moves for the purpose of flight or repositioning and ending when the aircraft comes to a stop at the next destination or at the point of departure.

FAR Flight Time Limits

FAR flight-time limits are hard limits, not just scheduling limits.

All pilots are limited to:

- 100 hours in any 672 consecutive hours (this is a rolling 672 hours, which is equivalent to 28 24-hour periods)
- 1,000 hours in any 365 consecutive calendar day period (this is a rolling 365 days)

FAR Flight Time Limit—Unaugmented Crew

To determine their flight time limit within an FDP for unaugmented operations, a pilot should enter Table A below with their report time, using the local time as follows:

- A pilot who is acclimated to a theater encompassing that FDP starting point should use the local time of that FDP starting point.
Exception: If that FDP starting point is within 60 degrees longitude of their base, they should use base time.
- A pilot who is not acclimated to a theater encompassing that FDP starting point should use the local time at the location where they most recently became acclimated to a theater encompassing the FDP starting point of that series.

Table A to Part 117: Unaugmented
Operations Maximum Flight
Time Limits

Time of Report (Acclimated)	Maximum Flight Time (hours)
0000-0459	8
0500-1959	9
2000-2359	8

FAR Flight Time Limit—Augmented Crew

A pilot's FAR Part 117 flight time limit within an FDP for augmented operations is:

- 13 hours for a 3-pilot crew
- 17 hours for a 4-pilot crew
- IF Delta has designated an FDP to be operated under the FRMS, there is no FAR flight time limit for that FDP.

FAR Flight-Time Limit Examples

Example 1: A pilot in unaugmented operations is assigned an FDP reporting at 0700 with three flight segments and a total of 7:40 flight time. However, due to weather, the combined flight time of the first two segments is 1:30 greater than scheduled.

Result: The pilot's flight time limit is 9:00 based on their report time of 0700. The pilot determines that the flight time of the third segment will cause them to exceed their flight time limits. They may not depart on the third segment.

Example 2: The aircraft is pushed back from the gate by a tug, but due to airport congestion there is a 20-minute delay waiting for taxi clearance.

Result: The time from pushback counts as flight time because the aircraft has moved for the

purpose of flight or repositioning.

Example 3: Due to unforeseen circumstances that arise after takeoff, a pilot has to land at an alternate airport. While on the ground, they determine that continuing to their original destination airport will cause them to exceed their FAR Part 117 flight time limit.

Result: The pilot cannot continue as scheduled and cannot commence any flight segment that would cause them to exceed their FAR Part 117 flight time limit.

Example 4: A crew taxis an aircraft to a holding area and is told to expect an extended delay before takeoff. The engines are shut down and the aircraft remains in the holding area for an hour before departing.

Result: All of the taxi and hold time is counted as flight time.

Example 5: Same scenario as Example 4 above, but the aircraft is towed to the holding area, sits for an hour before the engines are started and the flight takes off.

Result: All of the time beginning from pushback is counted as flight time. Note: this is the current Delta method of tracking flight time and is not consistent with the literal interpretation of FAR flight time.

Example 6: A flight pushes back and the crew taxis to the runway with the intention of flight. Before taking off the crew is notified that the flight is canceled, and the aircraft is returned to the gate.

Result: Under the current Delta method of tracking flight time, all of the taxi time is counted as flight time, but the cancelled segment no longer counts as a flight segment for the purpose of determining the number of flight segments in the FDP.

Example 7: Prior to takeoff, a crew taxis an aircraft to a deicing pad and shuts down the engines. The aircraft is deiced and the crew restarts the engines and departs.

Result: All of the time spent during taxi and deice counts as flight time.

Example 8: A pilot performs flying as part of their military duty or personal flying.

Result: Military and personal flying are flight time, but do not count toward the FAR Part 117 cumulative flight time limits. Flying performed by the pilot on behalf of Delta Air Lines and any other commercial flying during the applicable period is the only flight time counted toward the cumulative limit.

PWA Flight Time Limits (12 E.)

PWA Flight Time Limit—Unaugmented Crew

PWA scheduled flight-time limit for an unaugmented duty period is:

- Transoceanic = eight hours
- Non-transoceanic = FAR 117 table A

PWA Flight-Time Limit—Augmented Crew

PWA scheduled flight-time limit for an augmented duty period is:

- 12 hours for a 3-pilot crew
- Not restricted for a 4-pilot crew

PWA Annual Block Hour Limit (BHL) (12 B.)

In order to make every pilot available for flying throughout the year, the PWA limits the amount of

block time for which a pilot may be scheduled in a bid period. The formula for determining a pilot's BHL may be found in **Section 12 B.** of the PWA. A pilot can view their BHL for the current or subsequent bid period in iCrew. Go to Personnel->Qualifications->Block Hours Flown.

A pilot's monthly block hour limit is just that—a limit. A pilot may not be awarded a line of time exceeding their BHL. A pilot may not be awarded or assigned any trip or pick up any trip from the Pilot-to-Pilot Swap Board that will cause them to exceed their BHL.

There are three instances in which a pilot may exceed their BHL:

- A pilot may be awarded a WS or YS in the current bid period without regard to their BHL in the subsequent bid period. If the award causes them to exceed their BHL for the subsequent bid period, a conflicting rotation(s) in the subsequent bid period will be dropped to resolve the conflict. The pilot will not be entitled to the guarantee for the dropped rotation.
- A pilot may be awarded or assigned flying in the current bid period, after the closing of the bid window for the subsequent bid period and before the line awards for the subsequent bid period, which will reduce their BHL for the subsequent bid period. Their line award for the subsequent bid period is based on the BHL calculated at the time the bid window closed and will not be adjusted.
- If a pilot exceeds their BHL due to overflying or reroute, their line will not be adjusted, although there will be a negative effect on their BHL in subsequent bid periods.

Rotation Award Requirements & Buffers

All flying awarded to pilots is subject to the above limitations from the PWA and/or FAR 117. Some of the limitations in the PWA apply to all rotation assignments and awards, some limitations apply only to voluntary awards (e.g., WS/YS) and some limitations apply only to initial line awards. In addition, both PBS and PCS apply buffers above and beyond any hard limitations.

When buffers apply to a limitation or rest requirement, the buffer is:

- 30 minutes for PCS white slip, yellow slip, and swap with the pot awards
- 60 minutes for PBS awards and Pilot to Pilot Swap Board transactions

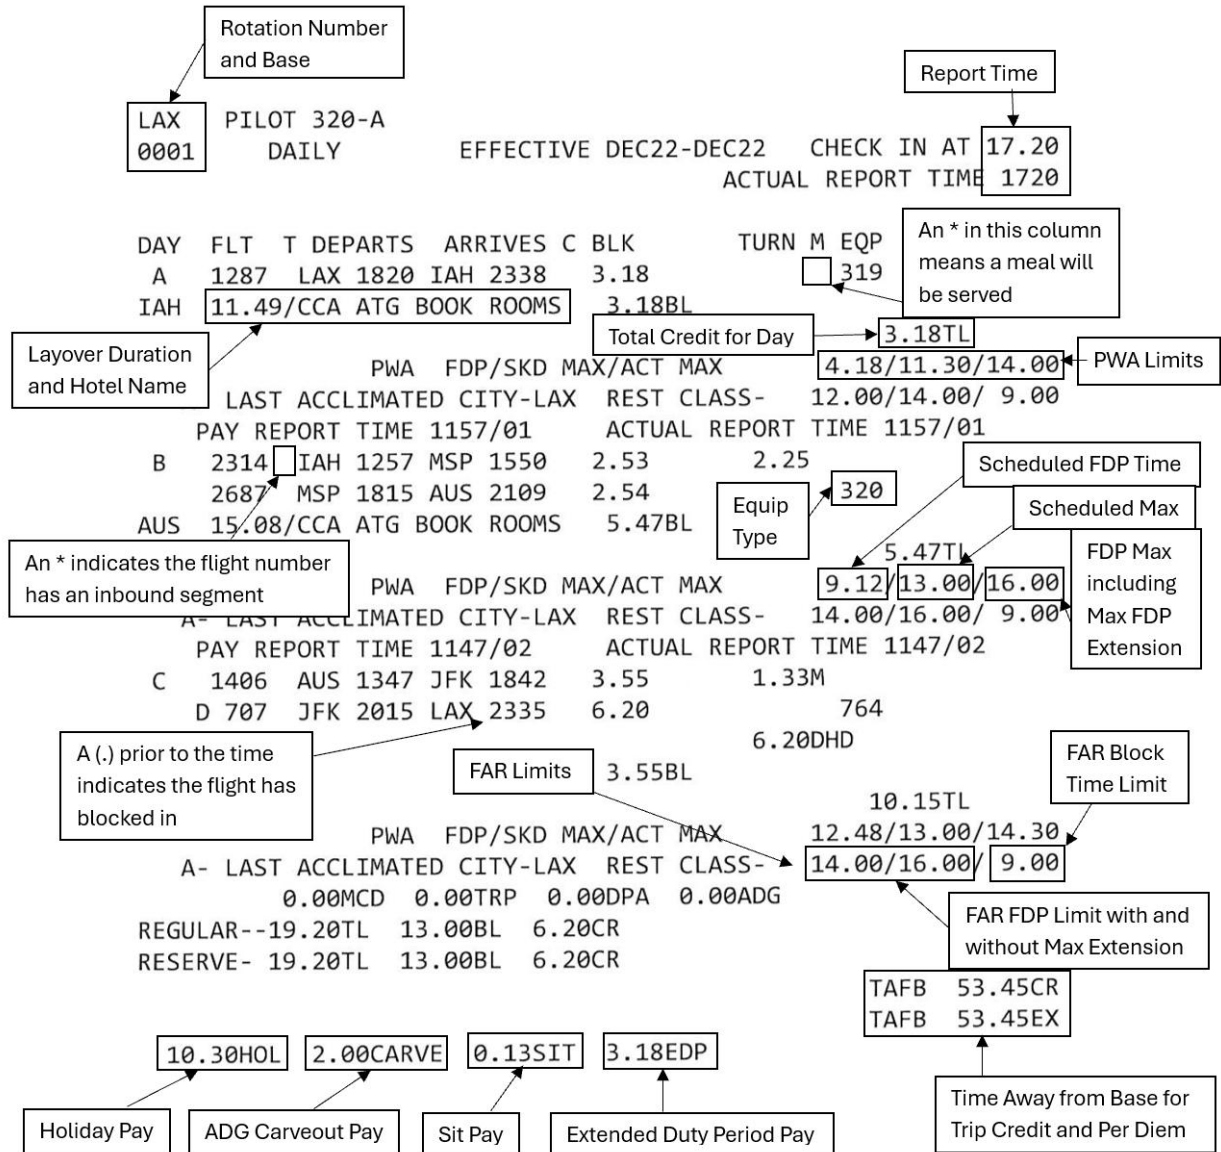

(Note: buffers do not apply to reserve assignments, green slip awards or inverse assignments)

PWA Limitations - All Awards and Assignments	Buffer?
Ten hours free of duty before a non-trans-oceanic duty period (buffer required by the ten hours' rest required by FAR 117 if not a DH-only duty period)	N
Scheduled 13 hours free of duty before and/or after a transoceanic duty period	N
Scheduled 24 hours free of duty between different direction (i.e., Europe, Pacific, South America) ocean-crossing duty periods	N
Scheduled Block Hour Limit (BHL)	N
Scheduled for flying in no more than three consecutive WOCLs	N
If scheduled to fly in three consecutive WOCLs, cannot be scheduled to fly in the following two consecutive WOCLs (pilot can waive this down to one WOCL off)	N

FAR 117 Limitations - All Awards and Assignments	Buffer?
Ten hours' rest before a Flight Duty Period (FDP)	Y
30 hours' rest in the last 168 hours	Y
56 hours' rest, to include three physiological nights (0100-0700, local domicile time) following a rotation with more than 168 hours Time Away from Base (TAFB) and in which the crew has traveled more than 60 degrees of longitude	Y
60 FDP hours in any 168 consecutive hours	Y
190 FDP hours in any 672 consecutive hours	Y
100 block hours in 672	Y

1,000 block hours in 365 calendar days	Y
Fatigue Risk Management System (FRMS) FDP - All Awards and Assignments	Buffer?
24 hours' rest before report for the FRMS FDP	Y
56 hours' rest, to include three physiological nights (0100-0700, local domicile time) following the rotation	Y
PWA Limitations - PBS Awards	Buffer?
<i>Scheduled 12 hours free of duty before and after a rotation</i>	N
<i>Scheduled 18 hours free-of-duty following a transoceanic duty period</i>	N
<i>Scheduled 48 hours free-of-duty between all different direction (Europe/Pacific/South America) ocean-crossing rotations (a pilot may reduce this requirement to 24 hours free-of-duty in PBS)</i>	N
<i>Scheduled for no consecutive duty periods that intrude into the WOCL, unless the intervening break-in-duty is at least 21 hours or includes the period from 0000 to 0759 (pilot acclimated time)</i>	N
<i>Note: Starting a rotation within the WOCL window is NOT a WOCL intrusion</i>	

Rotation Display Example

Latest Allowable Takeoff Time (LATT)

FAR Part 117 flight time limits and FDP limits are hard limits. Pilots need to be aware of the latest time that they are allowed to take off and remain under their FDP and flight time limits. We refer to this as the Latest Allowable Takeoff Time and it is calculated to prevent exceedance of any of the following limits:

- Cumulative FDP limit
- Cumulative block hour limit
- Daily FDP limit
- Daily block hour limit

Currently, we are presented with two separate LATTs. The Duty LATT and the Block LATT depending on each pilot's status as a reserve or regular pilot and the amount of flying or on-call obligation performed, the times may not be the same for all crewmembers. Delta provides us with the compliance data in the following ways:

Max FDP LATT Included in the Flight Plan Addendum Example

FAR 117 LATEST ALLOWABLE

TAKEOFF TIMES DL/1234/01/RLS 01 ATL-DTW 01JAN14

**** LATEST ALLOWABLE TAKEOFF TIME ****

**** DUE MAXIMUM FLIGHT DUTY PERIOD LIMIT ****

CAPTAIN ROTATION ID/DATE ATL 0001/01JAN

DUTY LATT DUE MAX FDP LIMIT

0

1/2300Z DUTY LATT DUE MAX FDP WITH EXTENSION APPLIED

0

2/0100Z

FIRST OFFICER ROTATION ID/DATE ATL 0001/01JAN

DUTY LATT DUE MAX FDP LIMIT:

0

1/2300Z DUTY LATT DUE MAX FDP WITH EXTENSION APPLIED:

0

1/2330Z

In this example, due to a previous extension, the first officer is only extendable by 30 minutes.

Max Block LATT, Included with Updated Weather Example

*****	LATEST ALLOWABLE TAKEOFF TIME	*****
*****	DUE MAXIMUM FLIGHT TIME LIMIT	*****
18:15		18:35
_____	PLUS 00:20 EQUALS _____	
OUT	MAX TAXI	BLOCK LATT
_____	PLUS 00:20 EQUALS _____	
OUT	MAX TAXI	BLOCK LATT

In this example, based on previous block hours flown during this duty period, taxi time in excess of 20 minutes will result in a planned exceedance of the block hour limit.

ACARS Notification of FDP Extensions

Delta uses an ACARS notification process for FDP extensions.

There are three possible messages that a pilot will receive. Pilots must choose to accept or decline the extension and send that information *prior to block in* at the destination:

- Five minutes prior to the pilot's unextended LATT and after ACARS is initialized, a non-chimed ACARS message will be uplinked advising the pilot(s) that the need for an FDP extension might exist.
- Upon reaching the pilot's unextended LATT and after ACARS is initialized, a non-chimed ACARS message will be uplinked advising the pilot(s) that the need for an FDP extension might exist.
- OFF + 20 minutes if FDP extension was needed but not acknowledged a chimed ACARS message will be uplinked advising the pilot(s) of the need to acknowledge an FDP extension. This will be the last message uplinked.

ACKNOWLEDGEMENT IS NOT REQUIRED BEFORE THE OFF EVENT, BUT MUST BE SENT PRIOR TO THE IN EVENT.

If a pilot accepts an FDP extension, the pilot must submit an ACARS FDP ACCEPT message along with the code prior to block-in. If they decline an FDP extension, or initially accept and then decide to decline an extension, the pilot must submit an ACARS FDP DECLINE message along with the code. After declining an FDP extension, the pilot should contact the Duty Pilot.

Each ACARS message will be sent with a unique response code. This unique response code should always be submitted when acknowledging an extension, acceptance or refusal. If all pilots listed on the ACARS message are replying with the same response, only either FDP ACCEPT or FDP DECLINE and the code need to be submitted. Crews should always be aware of their unextended LATT regardless of ACARS FDP notification. However, should you receive a notification before takeoff, ALPA strongly encourages all crews to use this as a time to assess all pilots' fitness for duty. Things can change between blocking out and taking off, and this notification is a good time to do one last assessment before takeoff. The safety of our crews, passengers and our airline is paramount. **At no time should a pilot feel pressured to fly when not properly rested.**

In the event ACARS is inoperative, refer to your aircraft's MEL for the procedures to follow in order to acknowledge acceptance or decline an FDP extension.

LATT Alerting via ACARS

LATT times are automatically monitored beginning at OUT time + 2 minutes.

If it is determined that any pilot has a computed LATT, Flight Time (BLOCK), or Flight Duty Period (FDP) within 30 minutes of the current time, an ACARS message will be sent to the aircraft providing the LATT time and the employee number of the affected pilot. This monitoring continues each minute until the OFF event is recorded. ACARS LATT messages are only intended to provide awareness of an approaching LATT. If a pilot receives this message, they must not depart after these times.

To minimize the possibility of an ACARS chime close to takeoff, only messages sent at OUT + 2 will include an alert chime (N/A A330/A350).

Must be **OFF** before 0251Z

Window of Circadian Low (WOCL) Operations

A pilot's WOCL is defined as the period between 0200 and 0559, pilot acclimated time. Both FAR 117 and the PWA limit the amount of flying a pilot may perform within their WOCL.

FAR WOCL Limitations

A pilot may not be scheduled for, or rerouted into, FDPs that infringe upon more than three consecutive WOCLs unless they are provided an opportunity to rest for at least two hours in a "suitable location" during each of the nighttime FDPs, as in split duty periods. Note that a DH-only duty period is NOT an FDP.

A WOCL is infringed upon if any part of the FDP touches any part of the WOCL. For example, an FDP that reports at 0600 does not infringe upon the WOCL, but an FDP that reports at 0559 does infringe upon the WOCL. An FDP that releases at 0159 does not infringe upon the WOCL, but an FDP that releases at 0200 does infringe upon the WOCL.

PWA WOCL Limitations (12 P.)

The PWA contains several WOCLs limitations that are more restrictive than FAR 117. Some apply only to initial line construction, while others apply throughout the month.

Initial Line Construction (applies only to non-trans-oceanic operations within North America and/or Latin America)

- A line may not contain consecutive duty periods that intrude into the WOCL unless the intervening break-in duty is at least 21 hours OR includes the period from 0000 to 0759 (pilot acclimated time)
- A single rotation may not contain more than two duty periods that intrude into a WOCL.
- If a duty period is scheduled to intrude into a WOCL, it will contain no more than two landings within the WOCL
- For an LAX, SEA, or SLC category, no flight segment will be scheduled with a departure between 0000 and 0500 pilot base time when the departure point is in the Central or Eastern time zone

A duty period intrudes into the WOCL if it reports prior to the WOCL and releases either inside or after the WOCL.

A flight segment intrudes into the WOCL if it departs prior to the WOCL and terminates inside or after the WOCL, either as scheduled or actual.

Examples:

- A flight that is scheduled to depart at 0130 and arrive at 0400 pilot acclimated time intrudes into the WOCL, even if the flight is delayed such that it departs after 0200 within the same duty period
- A flight that is scheduled to depart at 0130 and arrive at 0700 pilot acclimated time intrudes into the WOCL, even if the flight is delayed such that it departs after 0200 within the same duty period
- A flight that is scheduled to depart after 0200 does NOT intrude into the WOCL, regardless of when it arrives, even if it is part of a duty period that intrudes into the WOCL

All Operations

A pilot will not be scheduled or rerouted into a flight segment (operating or deadheading) that departs after a flight segment that intruded into the pilot's WOCL (0200 - 0559 pilot acclimated time). This applies to all rotations, not only those published in the bid package.

Because this rule applies to deadhead as well as operating flight segments, a pilot operating a redeye flight will normally be required to be scheduled to lay over prior to deadheading. If this occurs at the end of a rotation, the pilot retains the option of deviating from that scheduled deadhead as desired.

A pilot who is scheduled to fly in three consecutive WOCLs will not fly in the subsequent consecutive WOCL other than as late operations, i.e., a rolling delay. They may only be scheduled to fly in the fifth consecutive WOCL as a voluntary award, e.g., specific request in PBS, WS, YS, GS, etc.

Example 1: The Company intends to schedule a pilot for FDPs on four consecutive days that each have a report time of 0500 pilot acclimated time.

Result: That schedule is not permitted by FAR Part 117 because it infringes upon more than three consecutive WOCLs and the FDPs do not provide rest opportunities that meet the requirements to extend the limit to five consecutive WOCLs. It is also not permitted by the PWA.

Example 2: One of the FDPs from Example 1 is replaced by a deadhead only duty period.

Result: That schedule would be permitted under FAR 117 because a deadhead only duty period is not an FDP and no more than three consecutive WOCLs are infringed upon by an FDP but is still not permitted by the PWA because a deadhead-only duty period is still considered to infringe upon the WOCL.

Example 3: An ATL pilot is scheduled for back-to-back three-day trips to Europe.

Result: The schedule is permitted even though each trip has FDPs that infringe upon two consecutive WOCLs because the pilot is not on an FDP during a WOCL between the trips.

Example 4: A pilot's last flight segment blocks in at 0100 but is followed by a deadhead segment that blocks in at 0230.

Result: The FDP ends at block-in of the last flying segment. Thus, the duty infringes upon the WOCL, but the FDP does not. At Delta, this scenario will be treated as if the FDP did infringe upon the WOCL.

Redeye Flight Segment Restriction

A "red-eye flight segment" is an eastbound un-augmented flight segment that intrudes upon a pilot's WOCL, or touches 0200-0359 as the aircraft flies through the air.

The individual requirements that a flight must meet to be considered a redeye flight are as follows:

- The flight must be an unaugmented eastbound flight, i.e., the arrival airport must be east of the departure airport
- The flight must either intrude into the pilot's Window of Circadian Low (WOCL) or touch 0200-0359 as the aircraft flies through the air
 - A pilot's WOCL is the time from 0200 to 0559, measured in pilot acclimated time - a flight intrudes into the WOCL if it is scheduled to depart prior to the WOCL and arrive either inside or after the end of the WOCL
 - A flight "touches 0200-0359 as the aircraft flies through the air" if the flight operates during any portion of that period, measured in the time zone over which the flight passes at that time

A pilot will not be scheduled for a flight segment (deadhead or operating) prior to operating a redeye flight segment within the same FDP. This provision does NOT apply to a redeye flight segment that is scheduled to arrive prior to the pilot's WOCL unless the pilot has had a break in duty outside their base/acclimated time.

Examples:

- A pilot MAY NOT be scheduled to deadhead or operate LAX to SEA and then operate a redeye flight to ATL in the same FDP
- An LAX-based pilot MAY be scheduled to deadhead or operate to SEA on A Day of their rotation and then operate a redeye flight that is scheduled to arrive prior to 0200 pilot base time (the start of the pilot's WOCL) in the same FDP, because the pilot will not have had a break in duty outside their base/acclimated time

Note: This restriction on redeye flight segments does not apply to an FDP containing a charter operation and applies only to bid package rotations.

Fatigue Risk Management System (FRMS) Operations

The FAA has approved Delta Air Lines to operate certain A350 four-pilot operations under an FRMS using an operable Class 1 rest facility. The purpose of this FRMS is to allow these operations to exceed the normal flight/duty time limits of FAR 117.

Rotations operating under the FRMS in any given bid period are listed in the monthly bid package and indicated by 4* on the righthand side of the rotation display by each applicable leg.

FAR Flight Duty Period (FDP) and Flight Time Limits

An FRMS FDP will not be scheduled to exceed 20:30 and may be extended up to a maximum of 22:30 with the concurrence of the Company and the PIC. There is no flight time limit in an FRMS FDP other than that which is limited by the FDP itself.

PWA FDP Limits and Contractual Considerations (12 D. 1. Exception two)

A pilot will not be required to remain on an FRMS FDP more than two hours beyond its scheduled length. Prior to pushback, any individual member(s) of the crew can remove themselves from the flight if the flight plan shows the FDP to be more than two hours longer than originally scheduled. A pilot's decision not to remain on their FDP beyond this point will be accepted without question by Crew Tracking. No reason need be given by the pilot when exercising this option as it is not a fatigue-related provision and they will retain full rotation guarantee.

A pilot can recognize that an FDP will be operated under an FRMS by checking the FDP and/or flight time limits on the rotation display. The FAR FDP limit will be shown as 20:30, the flight time limit as 99:59 (i.e., no practical limit), and the PWA FDP limit will be equal to the scheduled FDP.

Pilot option to remain on FDP after 18:49

Max block set at 99:59 to signify no block limit

Duty and Rest Provisions

Before reporting for duty at the departure city of an FRMS operation, a pilot must have been scheduled for the pre-duty or layover rest period (if applicable) as shown in the table below. The pre-duty rest period must be scheduled to occur in the originating domestic city. For a flight where the first flight duty period is a deadhead flight to the originating domestic city, the reduced actual rest period is only permitted if the flight from the deadheading airport to the originating domestic city (that the pilot was on the previous day, as a deadheading pilot or as a pilot positioning the aircraft) was delayed due to a mechanical problem, weather or air traffic delay.

Departure City Local Time	Arrival City Local Time	Pre Duty Rest Planned/Min	Layover Rest Planned/Min
ATL 19:10	JNB 17:00	24/18	48/40
JNB 20:20	ATL 6:45		
FDP Start Local Time	Time of Day & Direction	Pre Duty Rest Planned/Min	Layover Rest Planned/Min
07:00 – 16:59	Day Westbound	24/13	24/20
07:00 – 16:59	Day Eastbound	24/13	24/20
17:00 – 06:59	Night Westbound	24/20	24/20
17:00 – 06:59	Night Eastbound	24/20	24/20

Upon returning to a domestic city from an FRMS operation, a pilot must receive at least 56 hours of rest, including three physiological nights (0100 - 0700 pilot acclimated time). A pilot may not be assigned any duty during this time, and this rest may not be reduced under any circumstance.

In the rotation below, the layover in ATL must be at least 56 hours in length, including three physiological nights. If the inbound flight 26 ICN - ATL is delayed for any reason such that the layover is reduced below this minimum, the subsequent outbound flight 27 ATL - ICN must be delayed to provide at least the minimum required rest.

Upon release from the rotation, the crew must also be provided at least 56 hours of rest, including three physiological nights. If the last flight of the rotation is delayed such that a pilot will not receive this minimum required rest, e.g., a scheduled rotation, training event, etc., then their schedule must be adjusted to provide at least the minimum required rest.

Cannot be less than 56:00, including 3 physiological nights

Pilot cannot have any duty until receiving 56:00 hours' rest, including 3 physiological nights, beginning :30 after actual block in

Short Call Reserve Coverage for FRMS Flights

To provide reserve coverage for last-minute FRMS flights, Crew Scheduling will notify reserve pilots in A350 categories of their conversion to short call 24 hours in advance, placing them into rest at the time of notification. A reserve pilot in an A350 category may be converted to short call on their first on-call day following a non-fly day(s) by being notified of the conversion to short call no later than 1200 (pilot base time) on their last on-call day prior to the non-fly day(s). Such pilot will be free from duty from the time they are notified of the conversion to short call until the start of the short call period.

The total number of hours a pilot may spend in a flight duty period and short call is 24:30 (20:30 plus four hours) as measured from the beginning of their short call period. This limit may NOT be extended.

Example one:

An A350 pilot is notified at 1200 of their conversion to short call at 1200 the following day. They are placed on rest from that point until the start of the short call period. After they have begun their short call, they are notified of a 1651 report to fly ATL - JNB. Their FDP is limited to 20:30 plus 4:00, measured from 1200, the start of their short call period. This limit may NOT be extended.

Example two:

A A350 pilot is notified prior to noon on their last on-call day prior to a block of X-days of their conversion to short call at 1200 on their first on-call days following that block of X-days. They are placed on rest from that point, through their X-days, until the start of the short call period.

FRMS Flight Delays

The FRMS provides that, should such a flight be delayed such that it cannot be completed within the allowable FDP limit of 20:30 (extendable up to 22:30), the crew may be reassigned to depart after receiving at least 10 hours of rest. This allows a new FDP report time to be set if the notification of the delay to the pilots is at least 10 hours before this new report time.

If the anticipated delay is short enough for the crew to remain within the allowable FDP limit, notification of a delayed report may be made to the crew within 10 hours of report. In this case, the initial report time cannot be adjusted for FAR purposes, and the FDP must be completed within the maximum 20:30 FDP (extendable up to 22:30), measured from the original report time. However, the pilot option to remove themselves from the flight prior to pushback if the flight plan shows the FDP to be more than two hours longer than scheduled is based upon the crew's actual report.

In either case, each pilot should carefully consider their fitness to perform the newly assigned duty.

Example:

A crew with a scheduled report of 1200 is notified at 0900 that their report has been delayed until 1500. Their FDP limit remains 20:30 (extendable up to 22:30), measured from 1200, their original report time. A pilot's contractual option to remove themselves from this FDP prior to pushback if the flight plan shows the FDP to be more than two hours longer than scheduled is measured from 1500, their actual report time.

Flight Cancellations and Diverts

If the crew reports for duty and the flight is cancelled, that crew must be given no less than 10 hours of rest before reporting for an FRMS FDP again. If the crew reports back for duty and the flight is cancelled again, each crewmember must be given 24 hours of rest before being required to report for FRMS duty again.

If an FRMS flight experiences a divert, or a return to the departure airport, and the flight to the destination can be completed within the FDP limit of 20:30 (extendable up to 22:30), the crew is permitted to remain on duty. However, any pilot retains the contractual option of removing themselves from the FDP if the new flight plan now shows the total FDP to be more than two hours longer than originally scheduled.

In either case, each pilot should carefully consider their fitness to perform the newly assigned duty.

Fatigue and the Fitness Review Board (FRB) (24 AA.)

As pilots, our first responsibility is to ensure the safety of our passengers and crew. Any decision regarding fatigue should be based solely on this issue. Passenger inconvenience and other factors are secondary and must not be allowed to outweigh safety. If it's not safe, do not fly.

A pilot will never lose pay guarantee as the result of a fatigue call. Note that removal from a rotation for reasons other than fatigue, e.g., sick, personal issues, etc., or because the pilot declines to extend their FDP beyond its limit under FAR 117 or beyond approved limits under FRMS is not covered by the FRB process.

“Fatigue” means a physiological state of reduced mental or physical performance capability resulting from sleep loss, extended wakefulness, circadian phase, and/or workload (mental and/or physical activity) that can impair a person’s alertness and ability to perform safety related operational duties. A pilot who is fatigued is too tired to remain on duty and will be immediately placed into rest.

“Unfit for duty” means you are fit to fly the next leg but may be fatigued for a subsequent leg.

Any number of physical or mental issues could cause you to be unfit for duty.

Assessment of fatigue is an individual decision; it is not a decision made by the captain on behalf of their crew. Each pilot must consider their own fatigue levels for all phases of flight, including landing and taxi-in, before agreeing to fly and before signing the release.

According to FAR Part 117, each flight crew member must report for any flight duty period rested and prepared to perform their duties. No certificate holder may assign, and no flight crew member may accept assignment to, a flight duty period if the flight crew member has reported for a flight duty period too fatigued to safely perform their duties. A pilot cannot accept an assignment for a flight duty period unless that pilot deems themselves fit for duty.

A pilot should make every effort to be properly rested prior to the start of any duty period. There are, however, circumstances beyond a pilot’s control that can prevent adequate rest prior to flight. For example, fire alarms or hotel guest noise may interrupt or prevent sleep. Such events are beyond a pilot’s control and can contribute to fatigue.

Any pilot who is fatigued or not fit for duty should immediately contact the Duty Pilot to initiate the fitness for duty process. If the Duty Pilot is not promptly available, pilots may alternatively contact Crew Scheduling (prior to report) or Crew Tracking (after report). Pilots who contact Crew Scheduling or Crew Tracking should request their information be forwarded to the Duty Pilot. Pilots will provide an expected rested and ready time to report for duty. The Duty Pilot will ensure Crew Scheduling and Crew Tracking (if not previously notified) and Crew Accommodations are notified of the pilot’s needs and undue operational pressure is not placed on the pilot.

The pilot will be returned to their original rotation following the expected time that the pilot declares they will be rested and ready to report for duty, with minimal disruption to the originally scheduled rotation. If it is not possible or practical to return the pilot to their original rotation, they will be released from any further obligation.

Within 48 hours of removing themselves from duty due to fatigue, either prior to reporting for their rotation or within their FDP limit, the pilot must submit to the Company a Fitness for Duty Report (FFDR). This report should state the circumstances that led to them not being fit for duty due to fatigue, and therefore unable to complete their Flight Duty Period (FDP) as scheduled. If the report has sufficient information for the FRB to make an informed decision on whether or not to debit a pilot’s sick bank, no further contact with the pilot is required. If insufficient information was provided in the initial report, the pilot will be contacted by an FRB representative and provided an opportunity to add additional information.

A pilot who declines an FDP extension will not be required to submit an FFDR or any other form.

FFDRs will be reviewed by the FRB, which is comprised of two ALPA and two Company representatives and meets on a monthly basis to review these reports. The FRB will not consider cases where the pilot calls in unfit for reasons other than fatigue (e.g., sickness or personal issues), or is unable to extend their FDP beyond its limit under FAR 117 or beyond approved limits under FRMS.

When a pilot is unable to complete any portion of a rotation (or reserve day) due to fatigue, pay for the rotation (or reserve day) is guaranteed with no pay loss to the pilot. If a pilot removes themselves prior to the start of their rotation (i.e., pre-report time) due to being unfit for duty for reasons where the operation was not a contributing factor to the pilot's fatigue as determined by the FRB, the scheduled block time of the segment(s), or the value of the reserve day(s), missed will be debited from the pilot's sick bank. Any such sick hours deducted from a pilot's bank will be excluded for purposes of sick leave verification lookback.

If the FRB is unable to reach a consensus on whether the operation was a contributing factor in the case of a removal prior to the start of a pilot's rotation, the matter will be referred to the MEC Chairman and the Senior Vice President of Flight Operations for final resolution.

The Fitness for Duty Report is located on Delta Net - My Division (Flight Operations) - Administration - Forms & Reports - Pilot Reports - Fitness for Duty Report

Under the terms of the PWA, the vacation year is April 1 to March 31. See the chart under Vacation Bidding for the vacation bidding timeline. A pilot may use the vacation move-up process to move an awarded vacation period to a more desirable period, if available. Vacation periods may be augmented by days purchased through the full service bank or the conversion of payback days into supplemental vacation days.

Also, “Vacation Slide” and “Vacation Any” may be utilized in PBS bidding to modify a vacation within a given bid period. For additional information, see the PBS Reference Handbook, available on the PBS Help & Resources website at <https://dal.alpa.org/Topics/CONTRACT/PBS>.

Definitions (7 A.)

“Accrued vacation” means the vacation time (i.e., the number of weeks or days) a pilot is accumulating in a vacation year for use in the next vacation year. The accrual rate for such vacation is determined by the number of years of continuous employment the pilot completed before April 1 of the vacation year.

“Earned vacation” means the vacation time (i.e., the number of weeks or days) a pilot is entitled to use in a vacation year.

“Individual Vacation Days” (IVDs) are a total of four to eight vacation days from a future vacation period (i.e., a vacation period that has not had the PBS bid package for that bid period published in iCrew) that can be used all together or split into two to four separate IVD periods each vacation year. The rules related to awarding of IVDs are identical to those for APDs but will be awarded prior to APDs. If a pilot were to choose to use their IVDs to drop a trip, they will receive vacation pay for each IVD just as they would have had they taken those vacation days with their regular vacation period.

“Purchased vacation” means the vacation days that a pilot receives as a result of a full-service bank transaction.

“Supplemental vacation” means the vacation days that a pilot receives (for use in the current or following vacation year) due to being inversely assigned into an X-day(s) (**Section 23 S. 9.**).

“Vacation bank hours” means the hours in a pilot’s vacation bank. A pilot will receive 4:35 per day for their vacation. A pilot’s vacation bank will be credited with the following number of hours:

Years of Continuous Employment Completed before April 1 st of Vacation Year	Earned Vacation	Vacation Bank Hours
1 – 4	2 weeks	64:10
5 – 10	3 weeks	96:15
11 – 15	4 weeks	128:20
16 or more	5 weeks	160:25

This allotment is proportionately reduced if you:

- Are furloughed or on a leave of absence (other than a known personal leave) in excess of 30 *aggregate* days, or
- Have a military leave of absence in excess of 30 *consecutive* days.

All vacation time is considered for line construction purposes in PBS. Additional vacation days that a pilot chooses to purchase from their full-service bank will also have a value of 4:35, with a corresponding “debit” to their full-service bank.

“Vacation period” means a portion(s) of the combination of a pilot’s earned, purchased, and supplemental vacation that is designated by the pilot as:

- a. primary
- b. secondary
- c. tertiary

d. quaternary

e. quinary

“Vacation year” means the period that begins on April 1 each year and ends on the following March 31.

Vacation Bidding (7 C.)

A pilot bids for vacation based on the category they hold on January 31 of the year the vacation year begins or the category they are scheduled to be converted to on or before January 31 of the year the vacation year begins.

Bid Deadlines

There are five rounds of bidding: primary, secondary, tertiary, quaternary, and quinary. Vacations awarded during each round are also labeled and prioritized as primary, secondary, tertiary, quaternary, and quinary.

Bid	Available Weeks Posted by:	Bidding Close Date (@2359E)	Award Posting Date
Primary	January 1	January 8	January 12
Secondary	January 12	January 19	January 23
Tertiary	January 23	January 30	February 3
Quaternary	February 3	February 10	February 14
Quinary	February 14	February 21	February 25

You can view your vacation days available for bidding in iCrew. From the **Main Menu** (iCrew) click on:

- ⇒ **Bids**
- ⇒ **Vacation**
- ⇒ **Initial Vacation Bids**
- ⇒ **Display Individual Vacation Days To Bid**

Helpful Hint!

The “help” function (PF5 key) is available on many pages.
This feature is helpful in filling out the bid information on that particular page.

Weeks Available for Bid in a Category

A vacation week begins on Sunday and runs through the following Saturday. Weeks in the vacation year are numbered consecutively, starting with the first Sunday in April. The actual number of vacation slots available for each numbered vacation week in a category is determined by the Company, subject to **Section 7 C. 7.** and posted in iCrew no later than January 1 of each year. You can reference the available slots when you structure your bid. The number of vacation slots in a week is reduced after the processing of each bid run based on the slots awarded from that run.

Numbered Vacation Weeks

To view the numbered vacation weeks for the following vacation year:

- ⇒ Main Menu (iCrew)
- ⇒ Bids
- ⇒ Vacation
- ⇒ Display Vacation Start Date Selection Numbers for Initial Vacation

To view the numbered vacation weeks for the current vacation year:

- ⇒ Main Menu (iCrew)
- ⇒ Bids
- ⇒ Vacation
- ⇒ Display Vacation Start Date Selection numbers for Move-up/Rebid Vacations

Weeks of Availability

To view the available slots for each numbered week in your category:

- ⇒ Main Menu (iCrew)
- ⇒ Bids
- ⇒ Vacation
- ⇒ Initial Vacation Bids
- ⇒ Display Vacation Weeks Available in Category

Vacation Bid Entry

Vacation bids are entered in iCrew and processed in seniority order. To enter a bid:

- ⇒ Main Menu (iCrew)
- ⇒ Bids
- ⇒ Vacation
- ⇒ Initial Vacation Bids

On this page, click on the appropriate vacation period via the Select Vacation Type (primary, secondary, tertiary, quaternary or quinary) and then Add Bids to enter your bid preferences.

Although the published weeks available to bid for primary vacations may not be available until January 1 vacation bidding opens November 1 of the previous year.

Vacation Periods

You may bid your entire allotted vacation in one period or split it into multiple vacation periods. The following restrictions apply:

- The maximum number of vacation periods is five.
- Each vacation period must be at least seven days long. *This means you must have at least 14 days of earned vacation in order to split it into two periods (SUPP days do not apply).*
- All vacation weeks within a single period must be available for bid. For example, if you bid two weeks of vacation starting with week 10, both week 10 and 11 must be available to be awarded.
- Vacation periods may be bid back to back. For example, in the primary bid you may bid and be awarded two weeks starting with vacation week 10. Then, in the secondary bid you may bid week 12. If awarded, this would constitute two separate vacation periods (weeks 10-11, and week 12).

48 Hours Free of Duty Prior to Primary Vacation (PVPP Days)

A pilot has the option of receiving two additional days free of duty immediately prior to their primary vacation (PVAC), provided they select them as part of their PVAC bid. PVPP days are unpaid days off. They do not apply any value to a regular pilot's LCW in PBS. They count as two of a reserve pilot's X-days and do not reduce their reserve guarantee.

For more information about PVPP days and their behavior during monthly line bidding, including vacation slides, please see the PBS Reference Handbook.

Less Than a Full Week of Vacation

If a pilot's accrued vacation is reduced for the time of a leave of absence or if they have worked less than a full year of employment in the previous year, they may have a number of vacation days that creates a "partial week" of vacation. This partial week of vacation will be bid as part of their *last* vacation bid. Additionally, the vacation period that their partial week touches must be available.

Example 1: A pilot has accrued 17 days of vacation. Their primary vacation bid may be for seven days and their secondary vacation bid will then be ten days. If they choose to bid week 25 as the start week for their secondary vacation bid, both weeks 25 and 26 must be available for the bid to be awarded.

Example 2: A pilot has accrued 17 days of vacation. They decide to bid all 17 days as their primary vacation starting on week 38. Weeks 38, 39, and 40 must be available for the bid to be awarded.

What Happens If You Fail to Put in a Vacation Bid?

If a pilot fails to bid in one of the vacation bidding periods, the system will attempt to award an available vacation week in the following order:

- One of the last two weeks of December

- Thanksgiving week
- A summer week
- Any available week

Purchased and Supplemental Vacation Days (7 E. 4. - 6.)

A pilot may purchase up to ten vacation days per vacation year from the full-service bank. When vacation days are purchased, 4:35 per day purchased is deducted from the Full Service Bank and deposited into the Vacation Bank. Available purchased days are listed on the VTS (Vacation/Training/Sick) page in iCrew.

If a pilot is eligible for any additional days off under **Section 23 S. 9.** through **12.** as of December 31, those days are automatically converted to Supplemental Vacation Days for use in the subsequent vacation year. Available Supplemental Days are listed on the VTS (Vacation/Training/Sick) page in iCrew. (See the chapter on Payback Day Usage in this SRH for other ways in which these days may be used.)

Purchasing Vacation Days

A pilot may indicate the number of vacation days they wish to purchase, and for which vacation year, in iCrew. If they are attempting to purchase vacation days for the current vacation year, they must also indicate the specific vacation period to which they would like the purchased days to be attached. To enter a bid:

⇒ Main Menu (iCrew)

⇒ Pay/Hours

⇒ Bank

⇒ Add/Update Bank Request

On this page, a pilot may enter the appropriate option (Option 3 to purchase vacation days for the next vacation year and Option 4 to purchase vacation days for the current vacation year) and the number of vacation days desired. If the purchase is for the current vacation year, the subsequent screen will show the pilot's remaining vacation periods so that they may indicate to which period the purchased days are to be attached.

Placement of Purchased or Supplemental Vacation Days

Purchased and supplemental vacation days may be placed at the beginning or end of any vacation period **at the pilot's discretion** for the subsequent vacation year. Two exceptions apply:

1. A vacation period may only be expanded by a block of seven consecutive purchased or supplemental vacation days in the month of December or the first ten days of January **and only during** the bidding and awarding of the vacation week **to which the additional days will be attached. the week where the additional days will be placed** must be available for award.
2. April and May vacation periods may be subject to a limited number of purchased vacation days to be set by the Company. This limitation is designed to allow the Company to remain in compliance with the staffing requirements under **Section 22 C.**

A pilot's placement options vary slightly depending on the timing of the request.

- **During Initial Vacation Bidding (prior to February 21)** – A pilot may indicate the number of purchased or supplemental vacation days they wish to place at the beginning or end of a particular vacation period at the time they bid for that vacation period. If they do not designate where the purchased or supplemental vacation days are to be added, the days will automatically be added to the beginning or end of the last awarded vacation week.

Note: If a pilot wishes to place additional vacation days at the beginning or end of a vacation period in December or the first ten days of January, but does not meet the exception requirements for placing additional vacation days, and:

1. They are not bidding their last vacation period, the vacation will be awarded but the additional days will not be awarded.
 2. They are bidding their last vacation period, the vacation and additional days will be awarded together, but not in December or the first ten days of January.
- **After Initial Vacation Bidding Closes (February 21 to March 31)** – Any vacation days purchased after vacation bidding closes must be placed at the beginning or end of an awarded vacation period. A pilot may also request to move any previously awarded purchased or supplemental vacation days to the beginning or end of any other awarded vacation period. This does not require Company agreement, but Exceptions 1 and 2 above still apply.

- *After the Vacation Year Begins (April 1)* – After the beginning of the new vacation year, a pilot may purchase vacation days for the current year. The days must be placed at the beginning or end of a vacation period for the current vacation year by mutual agreement with the Company. A pilot may also purchase vacation days for the subsequent vacation year.

Examples

In each of the following scenarios, the pilot is attempting to attach purchased or supplemental vacation days to an existing vacation and is submitting the request prior to April 1, the start of the relevant vacation year. Assume that the pilot is NOT requesting to add a block of seven days to their vacation.

1. Pilot has VAC November 23-29. DBMS will allow one and only one day to be attached to the back and as many as desired to the front.
2. Pilot has VAC November 30 - December 6. DBMS will allow no days to be attached to the back but as many as desired to the front.
3. Pilot has VAC January 4-10. DBMS will allow as many as desired days to be attached to the back but no days to the front.
4. Pilot has VAC January 11-17. DBMS will allow as many as desired days to be attached to the back but no days to the front.

Vacation Move-Up (7 D.)

After the quinary vacations are awarded, a pilot may bid to change an awarded vacation period through the vacation move-up bidding process in iCrew. Projected vacation periods will be available for move up before 0800E on the 25th day of the month that is two months prior to the bid period of the vacation.

Vacation move-ups are awarded according to the priority of the vacation and the pilot's seniority in their category. The primary vacation has the highest priority, followed by the secondary, tertiary, quaternary and quinary.

There are four different options that may be utilized for a vacation move-up bid:

- Move Entire Primary/Secondary/Tertiary/Quaternary/Quinary Vacation
- Split Off to Create a New Lower Priority Vacation
- Split Off to Combine with Another Vacation
- Move Any Part/All of a Vacation to a Specific Period

Clicking on the **F5 = Help** button will explain these options in more detail. Moving an entire vacation week from one week to another week is the most common bid and the most likely vacation move-up bid to be awarded. To split a vacation during the Move-Up process, a pilot must have at least 14 days in that vacation period.

Please see **Section 7 D.** of the PWA for more details on vacation move-ups.

Move-Up Bid Entry

Move-Up Bids are entered and processed via iCrew.

- ⇒ Main Menu
- ⇒ Bids
- ⇒ Vacation
- ⇒ Move-up Vacation Bids

Bids close at 0800E on the 1st of each month and awards are posted before 1800E on the 4th of each month. A move-up request will not be granted for a vacation week that begins in the current bid period. For example, a move-up request for a vacation week that begins on October 28 must be entered prior to 0800E on September 1.

When a move-up request is entered in iCrew, it will remain active until the move-up has been awarded or the month of the requested vacation period has passed. If a pilot decides they no longer desire the move-up, they must delete the move-up request. If awarded a vacation move-up, a pilot will receive a pop-up message in iCrew.

Individual Vacation Days (IVDs) (7 I. & 23 I. 11.)

IVDs are a total of four to eight vacation days from a future vacation period (i.e., a vacation period that has not had the PBS bid package for that bid period published in iCrew) that can be used all together or split into two to four separate IVD periods each vacation year. A pilot with fewer than three weeks of earned vacation may use up to four IVDs per vacation year on two separate occasions. A pilot with three or more weeks of earned vacation may use up to six IVDs per vacation year, also on two separate occasions.

A pilot may be eligible for up to two additional IVDs and up to two additional separate occasions each vacation year under **Section 14 K.**

The rules related to awarding of IVDs are identical to those for APDs but will be awarded prior to APDs. An IVD(s) must be the first and/or last day(s) of an awarded vacation period. If a pilot uses an IVD(s) to drop a trip(s) or on-call day(s), they will receive vacation pay for each IVD, regardless of the value of the rotation(s) or reserve on call day(s) dropped.

For example, assume that a pilot has a 4-day rotation reporting July 10. So long as the reserves available number for each day of the rotation is at least 25 percent of the number of reserves required, they may use an IVD(s) to drop the rotation. They may use anywhere from one to four of their IVDs to drop the rotation, which will drop with no pay. They will then be paid 4:35 for each IVD used.

To submit an IVD request, log into iCrew and select PCS → Leave Requests → Individual Vacation Days → Add Update Leave Request. Enter the date(s) on which you would like to place an IVD and indicate the vacation from which you would like the IVD(s) to be taken, and from which end. Note that, as with an APD, a day on which you have been awarded an IVD becomes a hard non-fly day on which you can neither be awarded nor assigned flying. As with an APD, the Company may deny an IVD request regardless of the number of reserves available during the period commencing two days before and ending one day after APD holidays. For a list of those holidays, please see **Section 23 I. 10.**

Qualification Training that Conflicts with an Awarded Vacation (7 C. 9.)

If a pilot is awarded an advance entitlement or voluntary displacement that requires qualification training and that training conflicts with an awarded vacation, the pilot may, at their option:

- Rebid the conflicting vacation period through the vacation move-up process. The pilot must notify Crew Resources of their desire to rebid the vacation within ten days of the first notice of a vacation conflict. If there are no available vacation periods for re-bid, the pilot may select a vacation week in the following year, after vacation bidding has completed. *The number of vacation periods available for bid in the following vacation year will be increased for every week resulting from a pilot who chooses this option.* Receive pay in lieu of taking the vacation period (paid out on the April 15th paycheck at the end of the vacation year).
- Request to retain the vacation period by entering such a request when entering their advance entitlement and voluntary displacement preferences in iCrew. Crew Resources will process such requests in seniority order and will attempt to schedule training that does not conflict with the vacation period. By requesting to retain a vacation period, a pilot agrees that a more junior pilot may be trained and/ or converted ahead of them with no pay protection provided.

A pilot who is assigned a mandatory displacement will not be scheduled for qualification training that conflicts with a previously awarded vacation period.

Please see **Section 7 C. 7.** of the PWA for more detailed contractual language.

Reroute or Late Operations into Vacation (7 F. 8. & 9.)

A pilot who flies into a vacation day(s), either due to late operations or a reroute is entitled to move that day(s), either to the end of that vacation period or to the beginning or end of a subsequent vacation period. If they choose to move the interrupted day(s) to the end of their current vacation period, they receive full pay and credit for the value of any rotation that is dropped as a result.

Vacation Rebid Entry

Vacation rebids are accomplished through iCrew.

- ⇒ Main Menu
- ⇒ Bids
- ⇒ Vacation
- ⇒ Rebid Vacation Bids

The **F5 = Help** button will provide additional guidance for entering your vacation rebid preferences.

Vacation Swaps (7 H.)

A pilot may swap an awarded vacation(s) with another pilot in their category by submitting a request via the Contact Crew Resources form (DeltaNet -> My Division -> right side of page under Popular Tools). To identify which pilot has a specific vacation period, a pilot may refer to the “Assigned Vacations” link on “Pilot Vacation & Known Leaves of Absence” page on the Crew Resources and Scheduling website.

Please see **Section 7 H.** for steps required to execute a swap, and the conditions that apply.

Vacation Contacts and Resources

If you have questions about your vacation bid, you may contact the Delta Crew Resources Vacation Office (ATL) via the SmartSheet on the Crew Resource/Scheduling page in DeltaNet under Contacts.

You may also contact the Delta ALPA MEC Contract Administration Committee **via the DART link at dal.alpa.org or by telephone at (800) USA-ALPA (800-872-2572).**

Scheduling of Qualification Training (11 F. 2.)

The manner in which the scheduling of qualification training is processed depends upon when the pilot is scheduled for such training.

Prior to 1800E on the 4th of the Previous Month

All qualification training that has been entered into a pilot's VTS file in DBMS will be loaded into PBS when line bidding opens for the subsequent bid period. PBS will process this training as a known absence, in accordance with *Section 23 Y. Miscellaneous, PBS Pay and Scheduling Examples*.

After 1800E on the 4th of the Previous Month

After the PBS bid window for the subsequent bid period opens at 1800E on the 4th of the prior month, any new or altered qualification training will not be utilized in PBS without the pilot's consent. If the pilot consents to pre-posting, they will be paid 3:05 for each training day as described in *Section 11 B. 1. a. 1) b)*. If the pilot does not consent to pre-posting, they will be paid for any conflicting trips that are dropped to accommodate the training as described in *Section 11 B. 1. a. 1) a)*.

Section 11 F. 2. a. of the PWA provides that the minimum time between the posting of qualification training on a pilot's line and the commencement of such training will be 15 days if the training is a result of an AE or VD award, or 25 days if the training is a result of an MD award. For example, if a pilot is to be scheduled for a qualification training event that begins on August 10, the deadline for posting such an event is July 26 if the training is a result of an AE or VD award and July 16 if the training is a result of an MD award.

Note that initial line awards for August will have been completed by either of these dates. Any training that is now assigned to the pilot will cause conflicting trips or on-call days to drop. The pilot, if awarded a regular line for August, will be paid and credited the greater of conflicting trips dropped or a pro-rata portion of the ALV per day for the period of their training.

For example, if the pilot's qualification training is scheduled to occur August 10-20, any trips on their line that are scheduled to operate on or after August 10 will be dropped. The pilot will be paid the greater of the value of any dropped trips touching August 10-20 or 1/30 of the ALV for each day August 10-20. Any dropped trips later in the month, i.e., that do not touch August 10-20 will be paid as though they were dropped due to an OE shadow period. That is, the pilot will be paid for any dropped trips that do not conflict with their OE, plus the greater dollar value of any dropped trips that do conflict with their OE or their OE itself.

Summary

The training planner has three deadlines to keep in mind, each of which affects their ability to schedule a pilot for training:

- Before 1800E on the 4th of the prior month - a pilot may be scheduled for qualification training that honors their requested days off in seniority order to the extent the Company is able; such training may be pre-posted in PBS
- After 1800E on the 4th but before 1800E on the 11th - a pilot may have qualification training pre-posted in PBS only if they are contacted and consent to such pre-posting; otherwise, the training can only be overlaid onto their initial line award after line bidding is complete
- After 1800E on the 11th - a pilot's qualification training may only be overlaid on onto their line award; such training must be posted by the 15- or 25-day deadline, as applicable

A pilot may **only** be scheduled for qualification training inside the 15- or 25-day deadline, as applicable, by proffer.

Pre-training Period (11 F. 2. c.)

A pilot will be afforded the option of designating two days free of duty immediately prior to the commencement of any qualification training (including initial, transition, upgrade, and requalification training) or the travel to such training. The days will be referred to as a pre-training period (PTP). A pilot may select this option on the "add/update advance entitlement/displacement preferences" template on the iCrew advance entitlement page by selecting Option G, Two Days Off Before Training. See the example

below.

A pilot may also request PTP days no later than 0800E on the 5th of the month prior to the earliest of such days. PTP days will not be paid and credited as training days and will have no value for line construction purposes. For a reserve pilot, such days will constitute two of the X-days allotted to their line under **Section 12 M**. A PTP will not be considered an absence for the purpose of prorating reserve guarantee.

Days Off during Qualification Training (11 F. 2. b.)

A pilot will receive at least two days free of duty in each consecutive seven-day period during ground, simulator, or flight training, with two exceptions:

- A pilot may be scheduled for one day free of duty in a consecutive seven-day period once during a qualification training program.
- A pilot whose scheduled training days are extended due to their failure to successfully complete a portion of their training may receive no less than one day free of duty in a consecutive seven-day period due to such extension.

A pilot, other than an entry level pilot, that is scheduled for qualification training whose footprint is at least 21 days in length and whose awarded base is two time zones or more away from the simulator training location, will receive at least three consecutive scheduled days off once during their qualification training footprint. If such pilot does not receive the three consecutive scheduled days off, then two additional vacation days that may be added to a vacation period in the current vacation year by mutual consent with the Company or added to the available vacation days for the next vacation year.

A pilot, other than an entry level pilot, who is scheduled for qualification training days in excess of 19 in a 30-day bid period, or 20 in a 31-day bid period ("an excess training day"), may elect to receive either 3:35 pay, no credit (in addition to other pay for the bid period) for each excess training day, or a compensatory day off for each excess training day.

- A pilot who has more than one excess training day must select the same option for all such excess training days.
- Days off between training events do not count as training days for purposes of determining "excess training days."
- A pilot who elects a compensatory day(s) off will have such day(s) placed in their Payback Day bank.

OE Scheduling (11 F. 8.)

A pilot to be scheduled for OE training may elect to receive two calendar days free of duty immediately following completion of training. Such request may be entered into iCrew under Personnel → Training/VTs → Training / OE Days Off Requests and must be submitted prior to the 20th day of the month prior to the bid period in which the OE training will be scheduled. The OE planner will then schedule the pilot's OE to begin no earlier than the third day following completion of training. Such a request will not result in any loss of pay.

The Company **will** provide 48 hours' notice before a pilot reports for any OE if more than ten days have passed since completing a simulator event. The Company may also proffer a minimum of 30-hour notice. It is up to the pilot to either accept or deny the 30-hour notice.

The extended notice period is to give pilots adequate time to arrange for childcare or any other personal obligations before OE. The minimum legal notice for OE under [FAR 117](#) is 30 hours of prospective rest in the previous 168 hours before a report.

There may be situations where a pilot cannot report for OE even with 48 hours' notice. The Company will accommodate those on a case-by-case basis. Training Planning's goal is to give pilots as much notice as possible.

NOE

A pilot who is NOE (non-qualified, awaiting OE status) is not on rest. As such, they must have at least a 30-hour break in the previous 168 hours to satisfy FAR 117 rest requirements. Since a pilot on NOE must be available for assignment, all FAR 117 rest requirements apply.

Training Over Rotation/Reserve Footprint

Training Planning can schedule training over the footprint of a rotation or reserve duty. In this circumstance, it is possible to receive less than 48 hours' notice as the pilot already had an obligation to the Company.

If you have questions regarding notification of assignments, please reference **the** When Have You Been Contacted? **Section** of the SRH.

Simulator Training

If a pilot has been waiting an extended period for a training assignment, such as Special Requalification (SRQ), Re-Establish Recency (RECY), etc., the Company will assign training that is "reasonable." If a pilot has personal obligations, such as childcare, parental care, or other crucial personal responsibilities, Training Planning will work with the pilot to find a mutually suitable training plan.

Summary

- A pilot may opt for two calendars off after completing qualification training prior to their first OE rotation
- The Company will provide 48 hours' notice for pilots awaiting OE if more than ten days after their last simulator event
- The Company may proffer a 30-hour notice; however, the notice will never be less than 30 hours of rest in the last 168 hours before reporting to comply with FAR 117
- Training Planning will also be sensitive to pilots' obligations when scheduling other training, such as SRQ, RECY, etc., after extended wait times

Cancellation of CQ Training (4 I.)

The following outlines PWA protections and pilot obligations in the event of a CQ or IQ cancellations.

Reserve Line Holders

If you are a Reserve Line Holder and your CQ is cancelled, your training days revert to on call days with a corresponding restoration of reserve guarantee.

Section 4 I. states:

A pilot will receive pay and credit for the value of a known absence (other than an unpaid absence) that was on their initial line of time and that is subsequently cancelled.

Reserve pilots are pay protected for their cancelled CQ, but the pay protection goes towards their reserve guarantee.

Regular Line Holders

Regular line holders whose days are dropped for Company convenience will be pay protected for the cancelled CQ under **Section 4 I.** and will have **no** recovery obligation.

CQ Cancelled

According to the Company, Training Planners should first attempt to cancel CQ for pilots in their “early” month. This allows the affected pilots time to bid for their CQ again in their must go or “must go” month. In addition, Training Planners may proffer other dates in the “early” or “may go” month to ensure pilots have options for recovery that work with their schedule.

Pilots cancelled in their “may go” month will not be able to bid for another CQ rotation as the bid window would already be closed for their “must go” month. In these cases, training planners will work with the pilot to find a mutually agreeable CQ footprint, if possible.

As a reminder, a pilot will not have their CQ moved over their golden days. Per **Section 11 B. 2. c.:**

Without pilot consent, the Company will not:

- 1) schedule a pilot to undergo CQ on their CQ golden days.*
- 2) extend a pilot's CQ into their CQ golden days.*

If getting rescheduled for CQ is not possible before the end of the pilot's “must go” month, the pilot will fall out of qualification. Pilots will be pay protected for the value of any trips dropped until the Special Requalification (SRQ) course can be scheduled and accomplished to regain qualification status.

Flight Duty after CQ Cancellation

Training Planning and Crew Scheduling are different departments at Delta. Often, these independent entities do not communicate with one another, and pilots may be subjected to illegal scheduling assignments after a CQ event is cancelled. Remember, travel days and training days are considered duty and are not considered rest. Pilots must ensure they receive the FAR 117 required *prospective* rest before accepting any additional flight duty period.

Reserve Obligations during Training

A pilot may not be scheduled to fly nor be on call during any portion of a training day.

Taken together, **Section 11 A. 6.** and **Section 11 A. 35.** of the PWA define a training day to be a day on which a pilot is scheduled to train, be on a break of three days or fewer between training sessions, or travel between their base and training location. **Section 11 F. 1.** further states that a pilot will be removed from scheduled flying and reserve obligations on each training day. Finally, **Section 11 F. 10.** requires at least nine hours free of duty after completing training, i.e., the end of the pilot's debrief, if training in base, or the block-in time of their scheduled flight from the training location to the base. (Scheduled positive space information can be found on your PBS calendar and in iCrew VTS.)

A pilot's schedule should reflect completed training time (as defined above by the end of the scheduled debrief or scheduled positive space flight), plus the nine-hour duty-free period. If the nine-hour duty-free period advances a reserve pilot into the next calendar day, then the pilot is immediately back on long call status at that time with an 18-hour minimum callout. If this period is still within the footprint of the original training day (i.e., does not advance into the next day), then they do not go back onto reserve status until 2400 that night, at which point the pilot is back on long call with an 18-hour minimum callout.

In no case may a pilot be scheduled to fly or be on call on the first training day prior to their report for training or the departure of the flight to the training location.

Example 1: Pilot based at the training location

Debrief ends at 1700E + 9-hour duty-free period = 0200E (the next day).

Result: The pilot is immediately back on long call status at 0200E, with an 18-hour minimum callout.

Example 2: Pilot based at the training location

Debrief ends at 1000E + 9-hour duty-free period = 1900E (the same day).

Result: The pilot is not back on long call status until **2400 base time**, with an 18-hour minimum callout.

Example 3: Pilot not based at the training location

Assumed positive space flight, as planned by the Training Department, blocks in at 2115 base time + 9-hour duty-free period = 0615 pilot base time (the next day).

Result: The pilot is immediately back on long call status at 0615 base time, with an 18-hour minimum callout.

Example 4: Pilot not based at the training location

Assumed positive space flight, as planned by the Training Department, blocks in at 1325 base time + 9-hour duty-free period = 2225 pilot base time (the same day).

Result: The pilot is not back on long call status until 2400 base time, with an 18-hour minimum callout.

Note: With regard to the examples of a pilot not based at the training location, only the scheduled arrival time of the pilot's planned flight back to their base will impact the subsequent start of a following reserve obligation. A pilot who encounters a delay to the end of their debrief requiring a later positive space flight to base or a pilot who is delayed while traveling on the planned flight to their base, must inform Crew Scheduling of the delays and ensure the start time of their subsequent reserve obligation is updated accordingly. A pilot who does not travel on the assumed flight, as planned by the Training Department, because they elect to book an earlier flight, elect to book a flight to a station other than their base, or utilize another means of travel (OAL or otherwise), will not have the start time of their reserve obligation adjusted for delays to their chosen means of travel or for any delays to the assumed flight that they elected not to book or travel on.

In each of the examples above, the pilot has no obligation to check their schedule or to be contactable until they return to reserve status, since a training day (to include travel) is NOT defined as a non-fly day. The pilot will not be scheduled to report or begin short call less than 18 hours after starting long call status, and Crew Scheduling will call to notify the pilot of any such assignment.

Sick Leave

Annual Allotment of Sick Leave Hours (14 D.)	227
Notification of Sickness (14 F.).....	227
Notification of “Well”	227
Shadow Bidding for Known Sick or Known Accident Leave (14 H. 1.).....	227
Early Return from Known Sick Leave	228
Sick Leave Verification (14 F. 3. - 6.)	228
What is Verification?.....	229
Sick Scenarios	229
Unanticipated Sick Leave - Regular Pilot	229
Partial Rotation Sick Leave - Regular or Reserve Pilot	229
Calling in Well Mid-Rotation and Replenishing Sick Bank - Regular Pilot.....	230
WS/GS/GSWC Sick Leave Scenarios (23 P. 3. e. & Q. 6. f. Exceptions)	230
Sick Leave on Recovery Award/Assignment	232

Annual Allotment of Sick Leave Hours (14 D.)

The annual allotments of sick leave hours in the chart below are based on what year of employment a pilot is in on June 1st of any given year. *(Example: A pilot who had their 6th anniversary with Delta in May 2013 would be in their 7th year of employment on June 1, 2013 and would receive 195 Sick Leave Credit Hours.)* All pilots with greater than 19 years of employment receive an annual allotment of 270 sick leave hours.

Year of Employment	Sick Leave Credit Hours
1st	50
2nd	75
3rd	100
4th	125
5th	145
6th	170
7th	195
8th	220
9th-19th	240
20th and thereafter	270

Notification of Sickness (14 F.)

A pilot is required to inform Crew Scheduling upon becoming aware that they will be unable to perform duty or be available on an on-call day due to sickness. Moreover, this includes notifying Crew Scheduling of periods of known sick or known accident leave as soon as a pilot becomes aware of them. This will allow Crew Scheduling to pre-post any known periods of sick or accident leave in PBS. A pilot is not required to state the nature of their illness to Crew Scheduling.

A pilot is also required to notify Crew Scheduling when they are well.

Calling in sick or well may be done via a telephone call to Crew Scheduling/Tracking, or via MiCrew.

Notification of “Well”

A pilot will remain on sick leave until they notify Crew Scheduling they are “well.”

- A regular pilot’s rotation will be removed from their line of time at 0700 pilot base time the day prior to report unless they call in well prior to that time.
- A reserve pilot who calls in well on an on-call day prior to 0600 will not be charged a sick day and will immediately be placed on long call status. If a reserve calls in well at or after 0600 on an on-call day, they will be charged for a sick day. The logic is that a reserve pilot who calls in well prior to 0600 can be given an assignment on that day since a long call pilot has a 18-hour leash.

Shadow Bidding for Known Sick or Known Accident Leave (14 H. 1.)

A pilot will shadow bid in PBS for periods of known sick or known accident leave in the subsequent bid period that are known by the Company before the close of line bidding. This is similar in application to the OE shadow bidding process.

Trips or on-call days that conflict with a shadow period are awarded for pay calculations only and will not actually be placed on the pilot’s line. A regular pilot’s pay for periods of known sick or known accident leave will be the greater of the scheduled value of rotations awarded that conflict with the shadow period or a pro rata portion of the ALV for each day of known sick or known accident leave. A reserve pilot’s pay for periods of known sick or known accident leave will be the greater of a reserve pro rata share for each on call day during their shadow period or a pro rata portion of the reserve guarantee for each day of known sick or known accident leave.

For example, assume that, on the first day of the month, a pilot is advised by their doctor and AME that, while they can still currently exercise the privileges of their First Class Medical certificate, they require surgery and that recovery will likely take eight weeks. The first available appointment for the surgery is over six weeks away on the 15th of the subsequent month and surgery is scheduled for that date. The pilot notifies Crew Scheduling of this upcoming eight-week period of known sick leave.

When PBS bidding opens for the subsequent month, the period of known sick leave starting on the 15th will be shown as a sick leave shadow period on the pilot's PBS calendar. The pilot will bid normally as if they did not have sick leave scheduled. Any flying or reserve on-call days awarded by PBS that conflict with the known sick leave shadow period will be awarded for pay purposes only and will:

- **For a regular pilot**, be compared to a pro rata portion of the ALV for that same period, and the pilot will be paid the greater of the two.
- **For a reserve pilot**, be compared to a pro rata portion of the reserve guarantee for that same period, and the pilot will be paid the greater of the two.

This will continue in subsequent bid periods containing the period of known sick leave until the pilot has recovered and called in well or exhausted their sick leave credit hours and transitioned to disability.

Early Return from Known Sick Leave

Six weeks after surgery the pilot from the **example above** has recovered and calls in well. The pilot has several options:

- Retain the full value of their period of known sick leave and return to work after that period, or
 - Retain the full value of their period of known sick leave, and
 - **For a regular pilot**, construct a line from open time available at the time of assignment without regard to **Section 23 P.**, in order to replenish sick leave credit hours used after calling in well,
 - **For a reserve pilot**, be assigned a specially created reserve line covering the balance of the schedule sick period,
- OR
- **For a regular pilot**, not be guaranteed pay and credit for the value of the known sick leave period and accept either:
 - a blank regular line for the balance of the period of known sick leave (having the ability to construct a line from open time available at the time of assignment without regard to **Section 23 P.**, or
 - a specially created reserve line for the balance of the period of known sick leave and be guaranteed pay and credit for no less than a pro rata portion of the reserve guarantee for each day on their specially created reserve line.
 - **For a reserve pilot**, accept a specially created reserve line for the balance of the period of known sick leave and be guaranteed pay and credit for no less than a pro rata portion of the reserve guarantee for each day of their specially created reserve line.

Sick Leave Verification (14 F. 3. - 6.)

The trigger for required verification is calling in sick **after** having exceeded 120 hours of sick leave in the preceding 12 bid periods. So long as they have not used more than 120 hours of sick leave in the preceding 12 bid periods, a pilot who calls in sick will not be subject to the verification requirement in that bid period, regardless of the amount of sick leave they use before calling well.

For example, assume a pilot uses no sick leave September through May, uses 30 hours of sick leave in June, and uses 60 more in August. Suppose they now use 75 hours in September. Because they did not use more than 120 hours in the 12 bid periods preceding September, they are not required to verify their sick leave in September, even though they have now used 165 hours in the prior 12 bid periods. However, if they now call in sick in October, verification will be required, as they will have exceeded 120 hours in the prior 12 bid periods (October of the previous year through September of the current year).

There are two ways to verify a sickness -- a Qualified Health Care Professional (QHCP) certificate and a doctor's certificate. A QHCP can be an A.P.R.N., a certified Physician's Assistant, a Chiropractor, or a licensed clinical psychologist. Similar to a doctor's certificate, a QHCP certificate is written verification from a QHCP indicating in general terms the nature of the pilot's sickness. A pilot who is required to verify a sick occurrence

because they used more than 120 hours of sick leave in the prior 12 bid periods has the option of providing either a QHCP or a doctor's certificate as verification.

	Verification Required	Type of Verification	Reimbursable
0-50 hours in both of 2 prior sick leave years	No	None	N/A
0-120 hours in prior 12 bid periods	No	None	N/A
More than 120 hours in prior 12 bid periods	Yes (unless pilot used 50 hours or less in both of 2 prior sick leave years)	QHCP or Doctor's Certificate	No
Greater than 14 consecutive days	No	None	N/A
Good faith basis	Company option (regardless of the number of sick hours used in the prior 12 bid periods)	Doctor's Certificate	Yes

What is Verification?

Depending on the reason for the verification, this may be accomplished by submitting a doctor's certificate or a QHCP certificate. Both certificates require written verification from the doctor or QHCP indicating in general terms the nature of the pilot's sickness.

The pilot must have a bona fide patient relationship with the QHCP or doctor who provides the certificate. That is, the pilot must be examined and/or treated by the medical professional in a manner consistent with their medical circumstances, irrespective of the pilot's relationship with that QHCP or doctor. A pilot's familial or social relationship with their doctor or QHCP does not preclude the establishment of a bona fide patient relationship. Typical indications of whether a bona fide relationship exists may include:

- Medical records normally kept in the course of treatment for any patient
- The pilot normally sees the QHCP or doctor professionally, absent any verification requirement
- The pilot's sickness is not inconsistent with the QHCP or doctor's area of practice

There is no requirement for a QHCP or doctor to provide a specific diagnosis of a pilot's medical condition. While a pilot may choose to provide a diagnosis, it is sufficient for the QHCP/doctor certificate simply to indicate - in general terms - the nature of the sickness. The following are some commonly used general descriptions of the nature of a sickness, though by no means intended to be comprehensive: cold, stomach bug, headache, back pain, broken leg, allergies, sinus congestion, type of surgery (e.g. shoulder surgery, cancer surgery), and oral/facial pain.

The QHCP/doctor certificate may provide the name of the disabling medication and cite the nature of the underlying medical condition in general terms.

Sick Scenarios

Unanticipated Sick Leave - Regular Pilot

A regular pilot notifies Crew Scheduling on the 9th that they are sick for their four-day rotation scheduled to report on the 10th. The pilot notifies Crew Scheduling that they are well and available for duty beginning on the 14th. The pilot is paid for the full value of the originally scheduled rotation for which they were sick, and that value is charged against their sick bank.

Partial Rotation Sick Leave - Regular or Reserve Pilot

A pilot reports for a rotation on the 10th. On the second day of the rotation, they notify Crew Tracking they are sick. The pilot returns to their base and recuperates. The pilot notifies Crew Scheduling they are well after the end of the rotation. If the pilot is a regular pilot, they are paid for the full value of the originally scheduled rotation with the portion of the rotation after they called in sick being charged against their sick bank. If the pilot is a reserve pilot, they are paid and credited for the portion of the rotation before they called in sick and paid and credited from their sick bank a reserve pro rata share for each on-call day after

they call in sick.

Calling in Well Mid-Rotation and Replenishing Sick Bank - Regular Pilot

A regular pilot notifies Crew Scheduling on the 9th that they are sick for their four-day rotation scheduled to report on the 10th. The pilot notifies Crew Scheduling that they are well and available for duty beginning on the 12th. Understanding that their sick leave bank has been debited for the full value of the original rotation, they pick up flying which conflicts with their original rotation via PCS, daily trip coverage, and/or the pilot-to-pilot swap board. The value of the conflicting trip will automatically be used to replenish the pilot's sick leave bank for the amount of sick leave used after the pilot called in well, and they will receive pay and credit for any remaining amount.

Example One:

- Regular pilot calls in sick for a four-day rotation (A, B, C, and D) with a value of 24 hours
- Pilot advises the Company on A Day that they will be well for B day
- Pilot is paid 24 hours of sick leave for original rotation
- A day has a value of seven hours and remaining rotation has a value of 17 hours
- On C Day, pilot is awarded and flies a three-day white slip with a value of 18 hours
- 17 hours will be used to replenish the pilot's available sick leave hours
- Pilot receives pay and credit for the remaining one hour of pay due for the white slip rotation

Example Two:

- Regular pilot calls in sick for a four-day rotation (A, B, C, and D) with a value of 20 hours
- Pilot advises the Company on B Day that they will be well for C day
- Pilot is paid 20 hours of sick leave for original rotation
- A and B days have a value of nine hours and remaining rotation has a value of 11 hours
- On C Day, pilot is awarded and flies a one-day white slip with a value of seven hours
- All seven hours will be used to replenish the pilot's available sick leave hours and the remaining four hours from the 11 original hours are paid from their sick leave bank
- Pilot receives no other pay and credit

Example Three:

- Regular pilot calls in sick for a four-day rotation (A, B, C, and D) with a value of 21 hours
- Pilot advises the Company on A Day that they will be well on B day
- Pilot is paid 21 hours of sick leave for original rotation
- A day has a value of six hours and remaining rotation has a value of 15 hours
- On B Day, pilot is awarded and flies a two-day green slip with a value of 11 hours
- 11 hours will be used to replenish the pilot's available sick leave hours
- In addition, pilot receives single pay, no credit for the portion of the GS that exceeds the lesser of the ALV or 75 hours

Example Four:

- Regular pilot calls in sick for a four-day rotation (A, B, C, and D) with a value of 22 hours that includes a duty period that begins on B Day and releases on C Day
- Pilot advises the Company on A Day that they will be well on C Day
- Pilot is paid 22 hours of sick leave for original rotation, of which 15 hours were attributable to A and B Day
- Pilot picks up a three-day rotation with a value of 18 hours that reports on C Day
- Seven hours will go to replenish the pilot's sick leave credit hours
- Pilot receives 11 hours pay and credit

WS/GS/GSWC Sick Leave Scenarios (23 P. 3. e. & Q. 6. f. Exceptions)

The PWA provides that a pilot will not be awarded a WS/GS/GSWC if the rotation would create an FAR conflict (30-minute buffer for WS) with a rotation(s) that the pilot missed or will miss due to sick leave. The two exceptions to this provision are:

- The pilot will be considered for such an award in seniority order after all pilots that do not have such a conflict

- This provision does not apply in the case of sick leave flyback

Note: The pilot is NOT “moved to the bottom of the list” for all WS/GS/GSWC awards, only for those awards for rotations that would create a conflict as described above.

Scenario #1

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305				3402	3402	3402
SICK	SICK	SICK	SICK				WS/GS	WS/GS	WS/GS

Pilot was sick for 3305 and later submitted WS/GS/GSWC for 3402. If they would not have been legal to fly both rotations (30-minute buffer for WS), they will be at the bottom of the WS/GS/GSWC list.

Scenario #2

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305						
SICK	SICK	WELL	WELL						
			3402	3402	3402				
			WS/GS	WS/GS	WS/GS				

Pilot was sick for 3305 and called in well for C day. They then submitted a WS/GS/GSWC for 3402. As this is sick leave fly back, they are not considered to have flown 3305 for legality purposes.

Scenario #3

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305		3306	3306	3306	3306	
SICK	SICK	SICK	SICK		SICK	SICK	WELL	WELL	
								3404	3404
								WS/GS	WS/GS

Pilot was sick for 3305 and 3306 and called in well for C day of 3306. They then submitted a WS/GS/GSWC for 3404. If they would not have been legal to fly both 3305 and 3404 (30-minute buffer for WS), they will be at the bottom of the WS/GS/GSWC list. However, they are not considered to have flown 3306 for legality purposes, as 3404 is sick leave fly back for 3306.

Scenario #4

10MAR	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
3305	3305	3305	3305						
SICK	SICK	WELL	WELL						
			3402	3402	3402		3505	3505	3505
			PCS	PCS	PCS		WS/GS	WS/GS	WS/GS

Pilot was sick for 3305 and called in well for C day. They were then awarded 3402, either through PCS or the Pilot to Pilot Swap Board. They then submitted a WS/GS/GSWC for 3505. Their legality is based upon their actual flying, including 3402. They are not considered to have flown 3305 for legality purposes, as the sick leave from that rotation was flown back by 3402.

Sick Leave on Recovery Award/Assignment

When pilots call in sick from their recovery award/assignments, the Company pays them and debits their sick leave bank by the value of their original NOOP rotation guarantee.

Note: If the pilot's recovery rotation was worth more than the original NOOP rotation, the pilot's pay would fall to the value of the original NOOP rotation guarantee.

What if a pilot then calls in well before the end of the recovery rotation and chooses to pick up flying that overlaps with that recovery rotation? In this case, the pilot's new rotation will be treated as sick leave flyback and paid per **Section 14 E. 2. b.**

It makes no difference whether or not the new rotation overlaps the pilot's original NOOP rotation.

Scenario #1

Suppose the Company removes a pilot from their rotation 3305/11MAR (worth 36:00) under **Section 23 K.** and assigns the rotation 0125/12MAR (worth 10:30) as recovery. This recovery rotation 0125 now carries a rotation guarantee of 36:00 (the value of the original NOOP rotation).

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						

Now assume this pilot now calls in sick for rotation 0125. As this rotation has the full value of their original NOOP rotation 3305, Delta will debit the pilot's sick bank for 36:00.

What if the pilot calls in well for B day and is awarded a WS for rotation 3301/13MAR (worth 12:00)?

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						
		Sick	Well						
			3301	3301					

Because 3301 overlaps the sick rotation 0125, it is considered sick leave fly back. The amount of fly back for which the pilot is eligible is the difference between the value of rotation 0125 (36:00) and the value of the portion of the rotation on which they were sick - A Day in this example. Assuming that the value of 3301 (12:00) is less than the amount of eligible fly back, the Company will deposit the total 12:00 value of 3301 into the pilot's sick bank, and their time card will only show the original 36:00 of pay.

Scenario #2

In a similar situation as in Scenario #1, suppose the rotation that the pilot is awarded on their WS is rotation 3301/15MAR, still worth 12:00. (Note that this award could happen either before or after calling in sick and/or well for rotation 0125.)

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP	3305	3305	3305	3305	3305	3305			
23 K. Recovery		0125	0125						
		Sick	Well						
					3301	3301			

Because 3301 does not overlap the pilot's sick rotation 0125, it is not sick leave fly back. The pilot will receive 12:00 pay and credit for 3301 in addition to 36:00 for 0125.

Scenario #3

Suppose a pilot is removed under **Section 23 K.** from their rotation 3305/16MAR (worth 24:00) and is awarded a **Section 23 J.** recovery slip for rotation 0125/12MAR (worth 12:00). This recovery rotation now carries a rotation guarantee of 24:00 (the value of their original NOOP rotation).

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						

What if this pilot now calls in sick for rotation 0125? As this rotation has the full value of the original NOOP rotation 3305, the Company will debit the pilot's sick bank for 24:00.

Now, what if the pilot then calls in well for B day and submit a WS for rotation 3301/13MAR (worth 12:00)?

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						
		Sick	Well						
			3301	3301					

Because 3301 overlaps the sick rotation 0125, it is considered sick leave fly back. The amount of fly back for which the pilot is eligible is the difference between the value of rotation 0125 (36:00) and the value of the portion of the rotation on which they were sick - A Day in this example. Assuming the value of 3301 (12:00) is less than the amount of eligible fly back, the Company will deposit the total 12:00 value of 3301 into the pilot's sick bank, and their time card will only show the original 24:00 of pay.

Scenario #4

In a similar situation as in Scenario #3, suppose the rotation that the pilot is awarded as a WS rotation 3301/15MAR, still worth 12:00. (Note that this award could happen either before or after calling in sick and/or well for rotation 0125.)

	11MAR	12MAR	13MAR	14MAR	15MAR	16MAR	17MAR	18MAR	19MAR
NOOP						3305	3305	3305	3305
23 J. Recovery Slip Award		0125	0125						
		Sick	Well						
					3301	3301			

Because 3301 does not overlap the pilot's sick rotation 0125, it is not sick leave fly back. The pilot will receive 12:00 pay and credit for 3301 in addition to 24:00 for 0125.

Targeted Line Value (TLV) and Average Line Value (ALV) (22 A. 4. & 22.)

Definitions

“Average line value” (ALV) means a number of hours established by the Company that is the projected average of all regular line values, for a position, for a bid period. That number of hours is between 72 and 84 (inclusive) for all narrowbody and 7ER positions, and between 71 and 85 (inclusive) for the 330, 350, and 765.

“Targeted line value” (TLV) means a 12-bid period rolling average of the ALV for a position that will be between 73 and 78 hours (inclusive).

“Position” means the combination of a pilot’s aircraft type and status.

Tracking and Monitoring of the TLV

The ALV is established by the Company for each position in a given bid period. The TLV, a 12-month inclusive “look-back” of ALV, ensures that the ALV does not remain consistently too high or too low. ALPA tracks and monitors the TLV and publishes a TLV average sheet on the MEC website. (See example below.) Please refer to the Library section of the MEC home page, then select “Committees,” “Contract Administration,” and “Bid Monitor.” Referencing the TLV average sheet below, you will notice the 12-month rolling average for each position in the far-right column. This average must comply with the applicable TLV range for that bid period.

	TLV

Vacancies and Surpluses (22 D. - F.)

PWA **Section 22** contains the contractual provisions by which a pilot may bid for and be awarded or assigned a different category when vacancies and/or surpluses are posted.

Definitions

“Advance entitlement” (AE) means an award (or, with respect to an entry-level pilot, an award or assignment) to a category that is anticipated to become effective on a subsequent conversion date.

“Category” means the combination of a pilot’s position and base (e.g., SEA 7ER A = SEA 757/767 captain).

“Category freeze” means a period of time that is determined under **Section 22 G.**, that commences on the date of a pilot’s award of an AE or voluntary displacement (VD) for which qualification training is required or on an entry-level pilot’s date of employment with the Company as a pilot, and during which the pilot will (unless declared eligible by the Company) be ineligible to be awarded another AE with an earliest conversion date falling within the freeze period (other than to a new or reestablished category) for which qualification training is required.

“Contingent displacement” means a displacement from a pilot’s new category that is caused by their displacement into that category.

“Contingent vacancy” means a vacancy in a pilot’s former category that is caused by their award to a different category pursuant to an advance entitlement.

“Conversion date” means the date on which the award or assignment of a pilot to a different category becomes effective.

“Displacement” means an award (voluntary displacement or VD) or assignment (mandatory displacement or MD) that is anticipated to become effective on a later conversion date to eliminate a surplus from a category.

“Position” means the combination of a pilot’s aircraft type and status (e.g., 7ER A = 757/767 captain).

“Status” means a pilot’s rank as captain or first officer (A = captain, B = first officer).

Process Overview

The process of filling vacancies starts when the Company publishes an advance entitlement or displacement bid posting. The bid posting may be a notice of vacancies, surpluses, or a combination of both. There is no defined schedule for the publishing of bid postings; the Company posts bids as needed.

Standing bids must be entered in iCrew no later than the closing date/time published in the bid posting. A pilot may enter three separate bids:

AE: a bid for a posted or contingent vacancy.

MD: a bid to indicate preferences to be used only if a pilot is mandatorily displaced from their category.

VD: a bid to be voluntarily displaced in lieu of a more junior pilot in the same category. This bid is only processed if a junior pilot would otherwise be mandatorily displaced from their category.

Crew Resources will post the bid results, a projected training/conversion list, and a projected category list on the “Crew Resources and Scheduling” page of DeltaNet.

Posting of Vacancies and/or Surpluses (22 D.)

The closing date/time will be at least 10 days after publication of a bid posting.

The latest conversion date must be no more than 150 days from the publishing date of the bid posting, with one exception. A bid posting in which at least 10% of posted positions are displacements may have a conversion date that is no more than 210 days from the publishing date of the bid posting. Once per calendar year, the Company may publish a bid posting in which the latest conversion date is no more than 335 days from the publishing date of the bid posting, so long as that posting contains at least one displacement.

Each bid posting will include the planned number of vacancies or surpluses. The actual number may be higher or lower due to contingent vacancies or surpluses. Therefore, a pilot's standing bids should always reflect what they want to be awarded (AE or VD) or the category they would like to hold if involuntarily displaced (MD) and should not be limited by the published number of vacancies or surpluses.

Bidding for Vacancies or Surpluses (22 E. & F.)

Standing bids are entered in iCrew. A standing bid may consist of up to three separate bid entries (AE, MD, and VD). For each preference, a pilot may specify one of three optional seniority restrictions on the award to that category:

LOW NBR—You are awarded the category only if you are projected to be at or above your specified minimum number in the category at the end of the conversion window. For example, if you enter a LOW NBR of 25, you will be awarded the category only if you are *projected to be* within the 25 most senior pilots in the category *at the end of the conversion window*.

LOW %—You are awarded the category only if you are projected to be at or above your specified minimum percentage of the category at the end of the conversion window. For example, if you enter a LOW % of 25, you will be awarded the category only if you are within the most senior 25 percent of the pilots *projected to be* in the category *at the end of the conversion window*.

REG ONLY—You are awarded the category only if you are projected to be a regular lineholder at the end of the conversion window.

Caution! A preference that specifies “regular line only” does not guarantee that you will be a regular pilot in the bid period of your conversion or any subsequent bid periods. The Company will make its best estimate of where the cutoff of regular lines for your desired category will be by the end of the conversion window, but this cutoff will likely vary throughout the year and is subject to change at any time, based upon the Company's operational staffing requirements.

A commonly used technique is for a pilot to include their current category with seniority restrictions. This allows a pilot to bid for several categories, including their current one, and to be awarded the category in which they will be the most senior. (See Example Bids #2 and #5.)

A pilot is not required to have a standing bid on file. However, we strongly recommend maintaining a standing MD bid at all times. Without a standing MD bid, if displaced, a pilot will be assigned a category under the provisions of **Section 22 F. 14.**, which may be at a different base.

A pilot's standing bid will remain active until one of the following occurs:

- they are awarded an AE or VD,
- they are assigned an MD,
- they are reinstated to a previous category, or
- they remove or change the standing bid.

The following table provides a summary of the several contractual provisions that apply to the awarding/assigning of a new category under the three different types of bids.

	AE	MD	VD
Keep Awarded Vacation	Yes	Yes	Yes
Eligible for Paid Move?	No (unless it is a newly established base)	Yes	Yes
Will Award Incur a Freeze? (Refer to <i>Section 22 A. 7.</i> and <i>22 G.</i>)	Yes (if qualification training is required)	No	Yes (if qualification training is required)
Eligible for Award If under a Freeze?	No (unless it is a new or reestablished category or a first-time captain position or the Company releases you from your freeze)	Yes	Yes
Seniority Used for Award	Use your seniority	Use your seniority	Use your seniority: • open vacancy or • same position at a different base Use junior pilot's seniority: • other position, no vacancy

How to Enter a Standing Bid

Please see the iCrew User Guide in the ALPA folder on your EFB.

Vacation Retention (7 C. 9.)

Option E allows a pilot to enter preferences to retain a scheduled vacation period that conflicts with qualification training required due to the award of an AE, VD, or reinstatement. (A pilot will automatically retain all scheduled vacations that do not conflict with their qualification training.) The Company will honor such requests, as follows:

- The vacation retention requests of pilots awarded the same position with the same award date, who entered such requests as part of their standing bids for such AE or VD (using Option E), will be granted in seniority order to the extent that the Company is able to assign another pilot(s) to the available training period(s) by a date certain, which is seven days prior to the award of lines for the bid period in which the training is scheduled to commence.
- The vacation retention requests of pilots that are made after such award date, may, at the discretion of the Company, be granted.

Note: In either case, if the pilot's request is granted, they will not receive pay protection if they are converted out of seniority order (see *Section 22 E. 9. Exception*).

If the pilot's request cannot be granted, the Company will notify the pilot and the pilot will then have ten days to decide what works best for them.

- The pilot may elect to re-bid the vacation through the vacation move-up process. If there are no available vacation periods for re-bid, the pilot may select a vacation week in the following year, after vacation bidding has completed. *The number of vacation periods available for bid in the following vacation year will be increased for every week resulting from a pilot who chooses this option.*
- At pilot's option, the pilot's earned vacation will be reduced by the number of days in such conflicting vacation period, and the pilot will receive pay under *Section 7 G. 3. b.* in lieu of such vacation period not taken.
- If pilot does not notify Company, the pilot will receive an available week in the current year. If none are available, the Company will pay out the pilot's vacation.

Request for Hotel During Training (5 E. 1.)

Option F allows a pilot to indicate their need for a hotel during training, if training is required as a result of a bid award/assignment. *Sections 5 E. 1. a.* and *b.* entitle a pilot to a hotel room during qualification training, either at or away from base. If a pilot does not indicate a need for a hotel on this template and later changes

their mind, they may indicate a need for a hotel by informing Flight Training Planning no later than the fifth day of the month prior to the bid period in which the training is scheduled to occur (e.g., by January 5 if training is scheduled any time in February).

Pre-Training Period (PTP) Days (11 F. 2. c.)

Option G allows a pilot to designate two days free of duty immediately prior to the commencement of their initial qualification training or the travel to such training. Such designated days will not be paid and credited as training days or have a value for line construction purposes. For a reserve pilot, such designated days will constitute two of the X days allotted to their line under *Section 12 M. 2*.

Note: A pilot who does not choose this option in their standing bid may request such days no later than 1800E on the fourth day of the month prior to the earliest bid period that contains such designated days by contacting Flight Training Planning. For example, a pilot who is scheduled to begin qualification training on April 2 may designate two days free of duty (March 31 and April 1) provided they make such request no later than 1800E on February 4. A pilot who is scheduled to begin qualification training on April 3 may designate two days free of duty (April 1 and 2) provided they make such request no later than 1800E on March 4.

Other Advance Entitlement/Displacement Preferences Page Options

The Advance Entitlement/Displacement Preferences page provides five additional options.

Posting of Pilots Vacancies and Surplus Positions

All bid postings will appear on the Crew Resources and Scheduling page of DeltaNet.

Count Pilots Holding a Preference for a Specific Category

A pilot can use this page to determine the total number of pilots senior to them who have submitted an AE bid preference for a specific category, and the number of pilots for whom this category is their first, second, or third choice. This information is updated in real time but does not specify any optional seniority restrictions that other pilots may have included in their preferences.

Display Pilot Vacancy Awards or Temporary Information

This page lists any AE or VD award or MD assignment a pilot received if they have not yet been converted to their new category.

Conversion/Base Assignment Information

This page lists a pilot's past category assignments and conversion dates and can be used to determine when reinstatement rights expire under *Section 22 F. 12*.

Relative Position Within Category for Next Bid Period

A pilot can use this page to determine the number of pilots in any specific category who will be bidding senior to them for the next bid period.

Reinstatement Rights (22 F. 12.)

A pilot who has been mandatorily displaced (MD) will be reinstated to the category from which they were displaced, without regard to the standing bids of more senior pilots, if:

- a. a vacancy is posted in that category, and
- b. the earliest conversion date stated in the posting is within the six bid periods following the conversion date of the pilot's MD, and
- c. their standing bid indicates a request for reinstatement and includes a preference for that category, and
- d. the vacancy has not been filled by reinstatement of a pilot senior to them who was also awarded an MD from the same category.

Note: If a pilot's preferences include a higher-priority AE preference for a different category, and that category has a vacancy that their seniority will allow them to hold, they will be awarded the higher-priority AE and not reinstated to the lower-priority category from which they were displaced.

Reinstatements to a category will be awarded in seniority order and are processed as part of the AE bid awards. Available reinstatement rights are shown in iCrew under AE bid preferences.

Training Assignments (22 E. 8. & 22 F. 9.)

A Projected Training Report will be posted on the Crew Resources & Scheduling page of DeltaNet a few weeks after the bid results are posted. It is similar to the Vacancy/Surplus Award Report but contains additional columns showing the month training is projected to occur (if required) and the month the pilot is projected to convert to their new category. Both dates are *projections* only.

The **actual** training assignment is made by Crew Resources. **Section 22** of the PWA governs assignments to training. In general, the order for training is as follows:

- Pilots awarded reinstatements/AEs to a category, in seniority order.
- Pilots assigned VDs from a category, in seniority order, followed by pilots assigned MDs from that category, in inverse seniority order.
- If there are multiple categories to which pilots have been awarded AEs and/or from which pilots are awarded VDs and/or assigned MDs, the Company determines which category to train to or from first.

Note: Training order is independent of previous or subsequent bid postings. Pilots from the *same* posting are trained in the order above.

Pilots will be notified in several ways when training is scheduled:

- Pop-up message in iCrew
- Letter to their residence
- The addition of training to their Vacation/Training/Sick (VTS) record in iCrew

Category Freeze (22 A. 7. & 22 G.)

The length of a pilot's category freeze is defined by the type of qualification training being undergone. While under a category freeze, a pilot may not be awarded another AE for which qualification training is required (other than to a new or reestablished category), except at the Company's discretion.

Type of Qualification Training	Duration of Freeze
Initial Qualification	24 Months
Differences	9 Months
All Other Qualification Training	12 Months

For example, a B-767/B-757 pilot who is awarded an AE or VD in the same status for the B-767-400ER (or vice versa) and undergoes differences training will incur a 9-month category freeze. Subject to **Section 22 G. 5.**, a pilot currently under a category freeze may be awarded an AE or VD to the same position at a different base.

The category freeze for a new hire is 24 months, with an exception after the first 12 months for a pilot who wishes to change bases and can only do so by changing aircraft. For example, a new hire who is assigned NYC 7ER B and can be awarded an AE for SLC 320 B with an earliest conversion date that falls at least 12 months after their hire date, provided they are unable to be awarded SLC 7ER B from that posting.

New or Reestablished Category

A new or reestablished category means a category that has not been in existence for 60 days since the date of the first opportunity for the first conversion. A pilot who is currently under a category freeze may be awarded a new or reestablished category even if qualification training is required. If the new or reestablished category is awarded as an AE or VD for which qualification training is required, a new category freeze will be incurred.

Note: There are exceptions to the conversion rules for a new or reestablished category. Specific details about the exceptions and the order of conversions may be found in PWA **Section 22 E.** and **22 F.**

Training Bypass (22 E. 13.)

A pilot may be bypassed on an AE by mutual agreement between the pilot and Company at age 60. The Company may bypass a pilot at its discretion at age 63.

Closing Categories

It is highly recommended that all pilots in those categories submit MD standing bids only.

New Aircraft Type

Specific details for pay and credit while in qualification training are covered in PWA **Section 11 B. 1.**

Note: There are exceptions to the conversion rules for a new aircraft type. Specific details about the exceptions and the order of conversions may be found in PWA **Sections 22 E.** and **22 F.**

Processing and Awards/Assignments

AEs and VDs to a category are awarded in seniority order among pilots whose standing bid contains a preference for the category.

MDs are assigned in inverse seniority order. A pilot who is being mandatorily displaced may be displaced, according to their preferences, to any category in which there is a pilot junior to him. A pilot whose standing bid does not contain sufficient MD preferences as of the closing date and time of the posting and is displaced will be assigned the next lower position at their base. If such pilot lacks sufficient seniority to hold a lower position at their base, they will, at Company option, be assigned into any position at another base that their seniority would permit them to hold.

A senior pilot may volunteer to be displaced (VD) in lieu of a junior pilot in their current category. A pilot who is being voluntarily displaced may:

- a. displace into a category to fill a vacancy existing at the time that the MD they are replacing is processed, and that their seniority entitles them to hold,
- b. displace into a category in the same position in a different base in which there is a pilot junior to them, or
- c. displace into any category in which there is a pilot junior to the pilot whose displacement they have volunteered to take.

A pilot's bid preference for an AE will not be awarded if the award, together with any VD/MD(s) to the same category, would create a surplus and cause a displacement from the category. In other words, a pilot's MD assignment (or VD award in lieu of a junior pilot's MD) into a category will supersede a more senior pilot's AE bid to that category. Please refer to PWA **Section 22 E 1.**

A pilot who is awarded an AE or VD may be bypassed, and pay protected at the higher composite hourly rate for the hours paid to them in their current category, if the commencement of their qualification training would be within:

- a. Five years of the date they reach the regulatory age limit for pilots, and the pilot and the Company mutually agree to the bypass, or
- b. Two years of the date they reach the regulatory age limit for pilots and the Company exercises its discretion to bypass. Specific details for AE/VD bypass provisions are covered in PWA **Section 22 E. 13.**

Bid Results

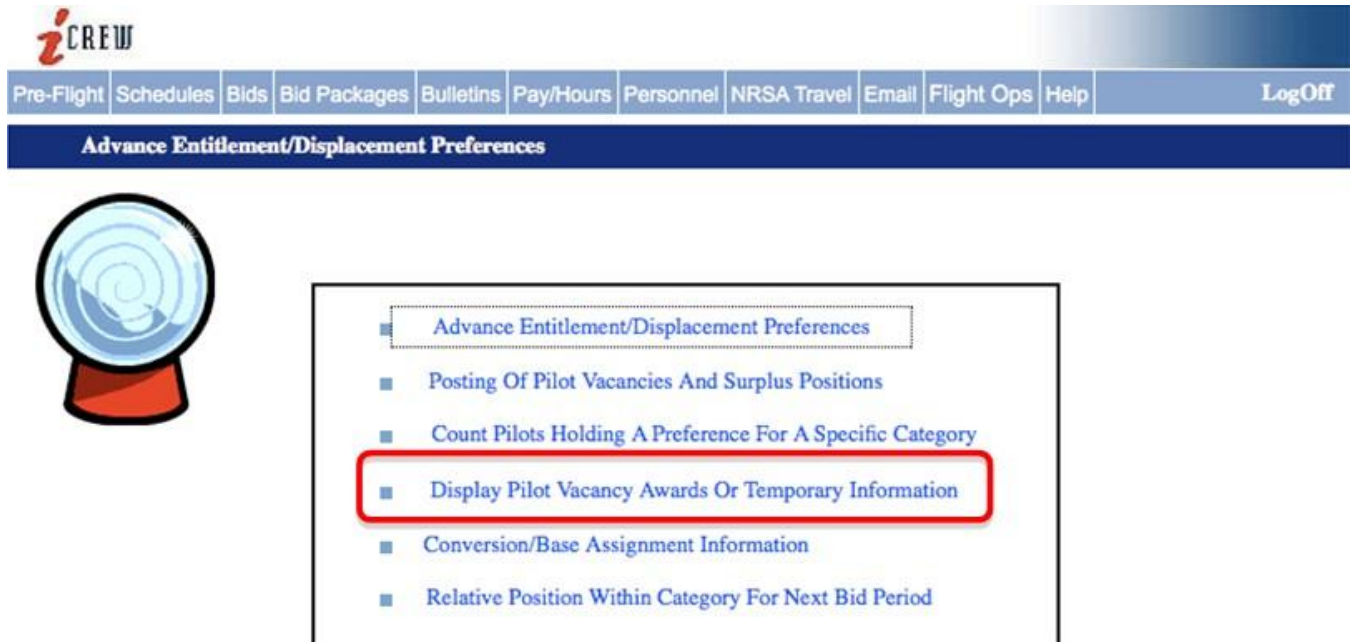

The bid results are posted on the Crew Resources and Scheduling page of DeltaNet. The Results link in the Advance Entitlements Displacements box on the right side of the page will bring up the Vacancy/Surplus Award Report. The report contains the following sections:

- Cover Page
- Advance Entitlement Awards
- Displacements (organized in two separate sections)
 - o Displacing to Category (VD first, in seniority order. MD second, in inverse seniority order.)
 - o Previous Category (VD first, in seniority order. MD second, in inverse seniority order.)
- Reinstatement

A pilot's individual award or assignment is posted in iCrew. Click on:

⇒ Bids

- ⇒ Advance Entitlement
- ⇒ Display Pilot Vacancy Awards or Temporary Information

Conversion (22 E. 6. & 22 F. 6.)

The conversion order for awarded AEs and VDs and assigned MDs will be determined by seniority:

1. Pilots who hold an AE from the same posting and to the same category will be converted in seniority order.
2. Pilots who hold a VD from the same posting and from the same category will be converted in seniority order.
3. Pilots who hold an MD from the same category will be converted in inverse seniority order.

Exception one: A pilot may indicate in their standing bid a desire to be converted among pilots who hold an award from the same posting, if:

1. Awarded an AE, after more junior pilots holding an AE to the same category.
2. Awarded a VD, after more junior pilots holding a VD from the same category.
3. Assigned an MD, before more junior pilots holding an MD from the same category.

Exception two: A pilot who is awarded an AE or VD and does not require training may be converted (in seniority order among other pilots not requiring training) in advance of a senior pilot who requires training.

Conversions always occur on the first day of a bid period. Monthly conversion lists are posted on the “Crew Resources and Scheduling” page of DeltaNet.

If training is required, the scheduled completion date of simulator training determines a pilot’s conversion date. If projected to complete simulator training on or before the 16th day of a bid period, a pilot will be converted no later than the first day of that bid period. If projected to complete training after the 16th day of a bid period, a pilot will be converted no later than the first day of the following bid period.

Note: There are exceptions to the conversion rules for a new aircraft type and a new or reestablished category. Specific details about the exceptions and order of conversions may be found in **Sections 22 E. and 22 F.**

Removal of Standing Bid

If a pilot is awarded an AE, VD, or reinstatement, or assigned an MD, their standing bids are removed (**Section 22 D. 10.**). We recommend that each pilot submit at least an MD bid prior to the closing of the next bid posting.

PBS Bidding

A pilot's conversion date will determine their category for PBS bidding. Please refer to the *PBS Reference Handbook* for insights into line bidding around qualification training.

Frequently Asked Questions

Q: My category is closing and I am being displaced. Which preferences should I submit?

- A: We recommend that pilots submit only an MD bid. A VD bid will not be awarded to a pilot in a closing category because they cannot "save" a junior pilot from MD. Submitting an AE bid could result in:
- award to a category lower on your preference list than your seniority would otherwise allow
 - loss of rights to retain an awarded vacation that conflicts with required qualification training
 - loss of paid move eligibility
 - a category freeze

Q: Should I list my current category in my AE/MD/VD bid?

- A: While not necessary, listing current category *with* seniority restrictions (e.g., Low Nbr, Low %, or Reg Only) is part of an effective strategy to attempt to remain at a desired seniority level within a category. A quick review on bid processing will highlight the impact of listing current category with *no* limitations. A pilot's AE preferences are processed first. If a pilot's AE preferences include their current category with no limitations, their AE bid will stop the processing at that point (provided they aren't being mandatorily displaced from their category). The MD bid is processed only if a pilot is being displaced from their category. Therefore, listing current category on the MD won't hurt, but it won't prevent an MD. A pilot's VD bid is processed only if someone junior in their category is being displaced. Like the AE, current category with no limitations on a VD bid would cause the bid to stop processing at that point.

Q: Do I need to submit an AE preference if I am happy with my current category?

- A: No. AE and VD bids are for categories a pilot desires *instead* of their current category. If a pilot doesn't wish to leave their current category, they should not submit an AE or VD bid. *However, we strongly recommend that all pilots have an MD bid on file at all times!*

Q: Do I need to submit an MD bid or will my AE bid be processed if I am displaced?

- A: Every pilot **absolutely** should have an MD bid in place. An AE bid will not be processed in place of an MD bid; an AE bid is only used to award a category with a vacancy. If a pilot's seniority does not allow the award of an AE, they would have *no* bid in place for displacement. At that point, they would be awarded a category under **Section 22 F. 14.**, which reads:

A pilot whose standing bid does not contain sufficient MD preferences as of the closing date and time of the posting and is displaced will be assigned the next lower position at their base. If such pilot lacks sufficient seniority to hold a lower position at their base, they will, at Company option, be assigned into any position at another base that their seniority would permit them to hold.

Q: When should I submit a VD bid?

- A: A pilot should submit a VD bid when they desire a new category. A pilot with a VD bid is volunteering to be displaced in lieu of a more junior pilot in their category. The VD bid is used in the same manner as an AE bid and usually should mirror a pilot's AE bid. That is, both the AE and VD bid should list categories which the pilot would like to be awarded. A VD bid may allow a pilot to be awarded a category that their seniority will not permit them to hold using an AE bid. A VD will also allow a pilot to be awarded a new category even if they are currently under a category freeze.

Q: How do I ensure that I will not be awarded a category in which I will end up on reserve?

- A: There are no guarantees against being awarded a reserve line during PBS bidding. Generally, a pilot with lower relative seniority is more likely to be awarded a reserve line. A pilot can minimize the possibility by specifying seniority restrictions (Low Nbr, Low %, or Reg Only) for categories they are bidding (including their own category). There is no specific low number or percentage that will guarantee a regular line. All seniority restrictions, including Reg Only, are *based on the projected category list at the end of the published conversion window.*

Q: What freeze applies if reinstated to a previously held category?

A: If a pilot was subject to a freeze when displaced, that “clock” continues to run and will apply when reinstated. For example, an MSP 320 B pilot is subject to a freeze that started February 1, 2012. That freeze will expire on January 31, 2014. In June 2012, the pilot was mandatorily displaced to MSP M88 B. If reinstated as part of a 2013 bid posting, the pilot would return to the MSP 320 B and would be subject to a freeze through January 31, 2014. If the pilot was *not* subject to a freeze when displaced, or if their freeze expired prior to their reinstatement, they will not be subject to a freeze when they are reinstated.

Q: How can I structure my bid to ensure I am displaced?

A: It isn’t possible to ensure a displacement unless the category is closing. A pilot’s MD bid will only be processed if, at the time their bids are being processed, the Company determines that due to surpluses there aren’t enough positions for the pilot to remain in their category. A VD bid will only be processed if a more junior pilot would otherwise be mandatorily displaced from the pilot’s category. If a pilot desires to be displaced, they should submit a VD bid with preferences/seniority restrictions they believe their seniority will allow them to hold, in addition to their MD bid.

Q: If I submit a VD bid and more junior pilots in my category are displaced, whose seniority is used to determine if I am eligible for another category?

A: It depends. If a pilot submits a VD bid, *their seniority* will apply to be awarded a category in which a vacancy exists at the time of processing their preferences or to be awarded the same position in a different base (e.g., displacing from MSP 320 A to DTW 320 A). The *junior pilot’s seniority* will apply to be awarded a category with no vacancy or to be awarded a different position in a category with no vacancy (e.g., displacing from MSP 320 A to MSP M88 A or to MSP 320 B).

Q: On the Add/Update Advanced Entitlement, Displacement, and Voluntary Displacement Preferences pages, what should be entered in the Pos column?

A: “Pos” stands for position. The only acceptable entries in this column are:
A = Captain
B = First Officer

Q: I am trying to enter mandatory displacement preferences, but I cannot find a mandatory displacement option. Where is it?

A: On the Add/Update Advance Entitlement/Displacement Preferences page, select option B, Displacement Preferences.

Q: I’ve been out sick for a year. Do I need to put in a bid?

A: If a pilot is using sick leave, their present category should be listed in iCrew (e.g., DTW 330 A), and they are eligible to participate in vacancy/surplus bidding. If a pilot is on a medical leave of absence, they should be listed as “NBC SIC” and are not eligible to participate. Please refer to **Section 13 C.** of the PWA for specifics about returning from a medical leave of absence.

Q: I am currently a SEA 330 B. I wish to remain in my category, but only if I can stay in the top 50 percent of the category. How do I bid?

A: Enter both an AE bid preference and a VD bid preference that contain the SEA 330 B category with a Low % seniority restriction of 50 percent. Next, enter lower-priority AE and VD bid preferences for desired categories. *We strongly recommend that all pilots have an MD bid on file at all times.*

Q: What am I paid while undergoing qualification training?

A: During qualification training, a pilot is paid for rotations removed to accommodate the training or a pro rata portion of the ALV, whichever is greater. The hourly rate is based on the pilot’s assigned category for the bid period. Refer to **Section 11 B. 1.**

Q: How am I paid if I am not finished with training prior to my conversion date?

A: At the conversion date, your hourly rate changes to the hourly rate of your new category. You continue to receive a pro rata portion of the ALV for each training day.

Q: I am a SEA 330 B who is scheduled for conversion to SEA 330 A on December 1, 2013. However, I am not scheduled to begin qualification training until January 1, 2014. How will I be paid in December and January?

A: You will be paid the ALV at the 330 A rate for December. You will bid for a line of time in PBS for January. PBS will not award anything that conflicts with your scheduled training. You will be paid a pro rata portion of the ALV for each day of training in January, exclusive of OE. Your pay for the remainder of January will depend on your PBS award and OE rotations flown. Please refer to **Section 11 B. 5.** for a complete explanation and examples of pay after completion of training and during OE.

Example Bids

At all times, a pilot should bid for what they want and want what they bid. If a bid posting indicates a surplus in one or more categories, it is always a good idea to enter displacement preferences—just in case—even if there is no posted surplus in your category. You may also wish to enter a bid indicating that you desire a different category if your seniority in your current category falls below a certain level. The following five examples highlight different situations.

Example Bid #1—Vacancy Announcement

First Officer Fly A. Broad is in the ATL 7ER B category and lives in Atlanta. They would like to bid the highest-paying international position that they can hold in ATL and are willing to be on reserve to do so. They are not willing to commute to any other base.

A bid is posted that contains vacancies and no surpluses. First Officer Broad might submit bids as follows:

AE	MD	VD
1. ATL 350 A 2. ATL 330 A 3. ATL 765 A 4. ATL 7ER A 5. ATL 350 B 6. ATL 330 B 7. ATL 765 B	1. ATL 330 B 2. ATL 73N B	None

This is a simple bid that reflects only vacancies. With this bid, the system will process through each AE preference and award the first category, if any, for which there is a vacancy at First Officer Broad's seniority. They do not submit a VD bid since no one is being displaced on this bid. However, they subscribe to the highly recommended technique of maintaining a basic MD bid at all times.

Example Bid #2—Vacancy and Surplus Announcement

First Officer Ima Gator is a commuter from Florida. They can barely hold a regular line in their ATL 7ER B category and are trying to avoid commuting to reserve. They do not desire for their relative seniority to fall below 75 percent. They would prefer instead to move to any first officer category in ATL in which they can hold a regular line.

A bid is posted with a number of vacancies and surpluses. First Officer Gator recognizes that they could lose relative seniority in their category, either by senior pilots converting to their category or by junior pilots converting from their category. Therefore, they might submit bids as follows:

AE	MD	VD
1. ATL 350 B 75%	1. ATL 350 B 75%	1. ATL 350 B 75%
2. ATL 765 B 75%	2. ATL 765 B 75%	2. ATL 765 B 75%
3. ATL 330 B 75%	3. ATL 330 B 75%	3. ATL 330 B 75%
4. ATL 7ER B 75%	4. ATL 7ER B 75%	4. ATL 7ER B 75%
5. ATL 73N B 75%	5. ATL 73N B 75%	5. ATL 73N B 75%
6. ATL 320 B 75%	6. ATL 717 B 75%	6. ATL 320 B 75%
7. ATL 717 B 75%	7. ATL 350 B	7. ATL 717 B 75%
	8. ATL 765 B	
	9. ATL 330 B	
	10. ATL 7ER B	
	11. ATL 73N B	
	12. ATL 320 B	
	13. ATL 717 B	

With AE, VD, and MD preferences submitted, the system begins by processing the AE bid first.

AE—This AE bid indicates a preference for the highest-paying first officer category in ATL in which First Officer Gator can be 75 percent relative seniority or higher. If they are projected to be at or above the 75 percent relative seniority level on the 350, 765, or 330, they may be awarded an AE to fill an existing vacancy. If not, and they are projected to be at or above the 75 percent relative seniority level in their own category, the system will stop at preference #4 and move on to the next pilot, leaving FO Gator in the ATL 7ER B category. If not, it will continue with the last four preferences and award an AE to fill an existing vacancy. If their seniority will not allow them to hold any of their seven AE preferences with 75 percent relative seniority, the system will not award an AE.

MD—If First Officer Gator was not awarded an AE and they are being displaced due to a surplus in their category, the system will process their MD bids. It will assign them the first category (even a higher one) in which, at the time of processing, there is a more junior pilot and for which any seniority restrictions are satisfied.

Their MD bid indicates a preference for the highest-paying first officer category in ATL in which they are at or above the 75 percent relative seniority level, if possible, followed by the highest-paying first officer category at any relative seniority.

VD—If First Officer Gator is not awarded a category from their AE bid *and* they are not being mandatorily displaced, but there is a junior pilot in their category that is a surplus and there are no senior pilot VD bids that can be awarded, the system will process their VD bids. The system will assign VDs from their category in seniority order to the extent that junior pilots would otherwise be mandatorily displaced. Seniority permitting, they will be assigned the first category which meets their seniority restrictions and in which there is either a vacancy or a pilot who is junior to the pilot whose displacement they are attempting to take.

Notice again that the system will stop at VD preference #4 if their seniority restrictions are met. If not, it will continue with the remaining preferences. If none of their preferences can be awarded, they will remain in their current category.

Example Bid #3—Surplus Announcement

Captain J. “Bull” Moose is in the DTW DC-9 A category, which is closing. Bull is currently senior enough to hold either 350 B or 320 A in DTW (their two preferred categories) and 7ER B in MSP. The DTW 320 A is their top preference, but they don’t know how their seniority will shake out with all of the displacements. Bull’s standing bid might look like this:

AE	MD	VD
None	1. DTW 320 A 80% 2. DTW 350 B 80% 3. MSP 7ER B 85% 4. DTW 320 A 5. DTW 350 B 6. MSP 7ER B	None

While Captain Moose could submit an AE or VD bid, there is no question they will be displaced on this bid because their category is closing. Keeping in mind that AE bids are processed ahead of an MD bid, Captain Moose realizes that if they submit the same preferences under an AE bid, they may be awarded the MSP 7ER B category via the AE bid if that is their only preference with a vacancy, while their MD bid will likely result in an assignment to the DTW 320 A category. In addition, being assigned an MD rather than awarded an AE allows them to avoid a category freeze and receive relocation benefits.

There is no need for a VD bid since their MD bid will be processed first.

Example Bid #4—More Complex Bid to Maximize Seniority

Captain Hedley “Head” Honcho is in the DTW 320 A category and lives in Chicago. Being centrally located between DTW and MSP, they find either base to be equally commutable. They like being senior in the left seat, prefer to fly the 7ER or 320, and want to be in whichever captain category will give them the most relative seniority. They are slightly above 50 percent relative seniority in their current category.

Captain Honcho’s bids reflect their desire to maintain as much relative seniority as possible.

AE	MD	VD
1. DTW 7ER A 25% 2. MSP 7ER A 25% 3. DTW 320 A 25% 4. MSP 320 A 25% 5. DTW 7ER A 50% 6. MSP 7ER A 50% 7. DTW 320 A 50% 8. MSP 320 a 50%	1. DTW 744 B 50% 2. DTW 330 B 50% 3. MSP 7ER B 4. DTW 7ER B	1. DTW 7ER A 25% 2. MSP 7ER A 25% 3. DTW 320 A 25% 4. MSP 320 A 25% 5. DTW 7ER A 50% 6. MSP 7ER A 50% 7. DTW 320 A 50% 8. MSP 320 A 50%

These AE and VD bids are more complex and indicate preferences for gradually lower relative seniority in their preferred categories. By including VD bids, Hedley ensures they will be considered for positions in the event pilots are displaced from their category and there are no vacancies in their preferred categories. While they are not likely to be in danger of mandatory displacement, Hedley always has MD bids entered.

Example Bid #5—Don’t Let This Happen to You!

First Officer I. B. Sleepen is a SEA 330 B and really enjoys living in base. The latest bid posting includes surpluses in other bases, but they figure that 22 pilots below them in category are enough to prevent their displacement. First Officer Sleepen hasn’t submitted any bids since they don’t want to fly out of another base and knows their seniority won’t allow them to hold a captain category in SEA. Their bids reflect their low level of concern.

AE	MD	VD
None	None	None

Unfortunately, Sleepen didn't correctly analyze the impact of those other surpluses. Twenty-three pilots were displaced into the SEA 330 B category, creating contingent surpluses, and they were mandatorily displaced. Without any MD bids submitted, they were treated under the provisions of **Section 22 F. 14.:**

A pilot whose standing bid does not contain sufficient MD preferences as of the closing date and time of the posting and is displaced will be assigned the next lower position at their base. If such pilot lacks sufficient seniority to hold a lower position at their base, they will, at Company option, be assigned into any position at another base that their seniority would permit them to hold.

Since First Officer Sleepen can no longer hold a position in SEA, the Company assigns them to DTW 744 B, where they are two from the bottom of the category. To rub salt in the wound, they could have held MSP 7ER B with enough seniority to hold a regular line. The moral of the story—***Always enter MD bid preferences!***

Asterisk Rotations (23 A. 2.)

General

An asterisk rotation is a rotation that is published in the bid package, and is scheduled to begin in that bid period and end in the next with:

1. A duty period that begins in the second bid period, and/or
2. A flight segment in the second bid period with a different flight number than the last flight segment in the first bid period.

An asterisk rotation is subject to change or removal from your line upon the publication of the following month's bid package. It can be extended by only a single day, reduced, altered in some other way in either or both bid periods, or canceled altogether. Once altered, the new rotation is referred to as a transition pairing and carries full rotation guarantee just as any other rotation.

Pay Implications

When your asterisk rotation is changed or canceled in the following month's bid package, you are guaranteed to be paid, in the current bid period, no less than the total value in the current bid period of the original asterisk trip. You are NOT due any pay guarantee in the following bid period.

Asterisk Rotation Shortened

The example below shows an asterisk rotation having been shortened by two days.

August Bid Package

#9502	TH	EFFECTIVE AUG. 29 ONLY										CHECK-IN AT 5.55				
POS - A,B																
	DAY	FLIGHT	T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA FDP/MAX

									1.27DHD							
								3.43/	9.00 .41DTY	5.51TL						
								4.18TRP	.00DPA .00ADG							
TOTALS---											16.42TL	8.20BL	8.22CR	18.34FDP	TAFB	58.26

September Bid Package

#9800	TH	EFFECTIVE AUG. 29 ONLY										CHECK-IN AT 5.55				
POS - A,B																
(REPLACES # 9502)																
	DAY	FLIGHT	T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA FDP/MAX					
A		804	ATL	0655	MCO	0819	1.24	1.06	757							
				MCO	0925	ATL	1058	1.33								
									5.03/12.00	5.03/11.30						
								2.57/	9.00 .00CRD	2.57TL						
									.00TRP .00DPA	2.18ADG						
TOTALS---											5.15TL	2.57BL	2.18CR	5.03FDP	TAFB	5.33

The pilot in the example above is guaranteed to be paid no less than the value the portion of the rotation in the current bid period (A + B Day = 6:33). They are not guaranteed pay for C Day, since it falls in the next bid period. Once the asterisk rotation has been replaced by the transition pairing, the pilot is guaranteed the full value of the rotation.

Asterisk Rotation Cancelled

If your asterisk rotation is cancelled altogether, you will receive a pay guarantee of the value in the current bid period of the asterisk rotation and will be subject to recovery under Section 23 K. of the PWA. Your recovery flying must be scheduled to report no earlier than your original report and to release no later than midnight on the last day of the bid period. Again, you will NOT receive any pay guarantee in the following bid period.

Asterisk Rotation Lengthened

If your asterisk rotation is extended by a day in the next month's bid package, you will receive single pay and credit for the rotation as flown, plus single pay, no credit for the additional duty period that the extension created. Since the additional duty period is the last duty period of the rotation, this additional pay will include TAFB, ADG, and/or any other credit earned on the rotation.

Note that this additional pay applies only to you so long as the rotation remains on your line. Were you to add such a rotation to your line (either from open time or from another pilot) after it had been extended, you would NOT be due the additional pay for the last duty period. You would simply be paid single pay and credit for the entire rotation.

In the example below, the asterisk rotation has been lengthened by one day. The pilot will receive 21:00 single pay and credit for the transition pairing, plus an additional 5:34 pay, no credit (the value of the added day). This pay is added manually to the pilot's time card by Crew Scheduling on or about the seventh day of the month in which the asterisk rotation ends.

FAR/PWA Violation Caused by Asterisk Rotation Change

If your asterisk rotation is changed such that it creates an FAR/PWA conflict with a prior rotation on your line, either an adjustment to the asterisk rotation will be made to correct the violation or the rotation will be removed from your line entirely. Again, you are guaranteed no less than the first bid period's value of your original rotation but will be paid only the value of the new rotation in the second bid period.

If your asterisk rotation is removed entirely from your line due to an FAR violation, you will be subject to recovery flying that must be scheduled to release no later than midnight on the last day of the bid period.

Asterisk Trip Extended into Vacation

If your asterisk rotation is changed such that it conflicts with your scheduled vacation in the subsequent bid period, the new transition pairing will be removed from your line. You will be paid for the portion of the asterisk rotation in the current bid period and will be subject to recovery flying that must be scheduled to release no later than midnight on the last day of the bid period.

If you are awarded a vacation move-up that conflicts with your asterisk rotation or transition pairing, you will have two options:

1. Drop the conflicting rotation with pay protection and recovery obligation in the first bid period. You will be paid only for the portion of the rotation that is scheduled to operate in the first bid period, and any recovery flying to which you are assigned must be scheduled to release no later than 2359 on the last day of that bid period.
2. With the concurrence of Crew Scheduling, move the vacation to begin on the day after the conflicting rotation.

Commuting Policy (PWA) (23 X.)

A commuting pilot is expected to arrive at their base with sufficient time and with adequate rest prior to beginning scheduled duty. A pilot will notify Crew Scheduling ASAP if they are unable to report as scheduled. Crew Scheduling will have the option of deadheading the pilot into their scheduled rotation, placing the pilot back on their scheduled rotation when it transits their base, removing the pilot from their scheduled rotation, or removing a reserve pilot from their on-call days. There is no rotation guarantee or reserve guarantee associated with any removal. To qualify for the treatments listed above, the pilot must have attempted to travel by air on at least two flights (on-line or off-line), as follows:

- The flights must be at least two hours apart and scheduled to arrive at their base at a reasonable time before their scheduled report, and
- The flights must show adequate actual seat availability within 24 hours of the departure, considering the pilot's seniority and normal load factor, or the pilot must have a jumpseat reservation.

Please note that the Company has an Unable to Commute policy, defined in the FOM and copied below, which is intended to recognize that prudent planning can, on rare occasions, be overcome by unforeseen circumstances. The policy was implemented to provide assurance of positive-space transportation to a pilot's scheduled or assigned duty. Please familiarize yourself with the entire policy from the FOM if you intend to avail yourself of this process. Please be aware that compliance with the PWA requirements outlined above will not necessarily make a pilot eligible for positive-space transportation under the Company's Unable to Commute Policy. The Company's policy requires an earlier notification from the pilot to Crew Scheduling.

Unable to Commute (UTC) Policy (FOM 3.3.1 December 30, 2016)

Background

The UTC policy recognizes that prudent planning for a commute can sometimes be negated by unforeseen circumstances. As a result, Delta developed UTC to maintain schedule integrity by assuring positive space transportation to a pilot's scheduled or assigned duty, including seniority list instructor pilots who are commuting to a scheduled training event at the Training Center in Atlanta, if they are UTC due to operational difficulties, such as weight-restricted flights, cancellations, mechanical delays, IROPS, etc. It is not intended to remedy the consequences of poor planning.

Definition

- Prudent planning is defined as having allowed for both a primary and a back-up flight that are scheduled to arrive at the pilot's base within a reasonable time prior to scheduled report.
- Prudent planning also requires that a pilot consider cabin/jumpseat availability, weather, and any special events that may impact load factor.

Requirements

- Pilot remains responsible to arrive at their base prior to duty with sufficient time and adequate rest, in accordance with governing rules and regulations.
- In order to utilize this policy, the pilot must have listed and checked-in for either a jumpseat or cabin seat on their primary flight.
- The primary flight can be on a Delta mainline, DCI, or OAL. The back-up flight must be on a Delta Mainline or DCI.

Procedure

If a pilot is not successful in boarding their primary flight:

- The pilot will notify Crew Scheduling.
- The pilot will provide the scheduler with the flight numbers of the primary and back-up flights.
- The scheduler will verify:
 - o that the pilot was listed for the primary flight, and
 - o that both flights were scheduled to have arrived within a reasonable time prior to scheduled report.
- Once verified, the scheduler will create a positive space reservation (or a jumpseat reservation, if available) on a flight that is scheduled to arrive prior to the pilot's scheduled report.
- Delta will provide positive space transportation only to the airport of a pilot's assigned duty.
- The scheduler must be able to make a positive space reservation prior to actual boarding of the

- intended flight.
- Positive space transportation will be provided regardless of reserve coverage.

Contingency

In the event that the back-up flight will not arrive prior to the pilot's scheduled report and the scheduler cannot find another suitable flight:

- The scheduler may make a reasonable attempt to deadhead the pilot (no pay or credit) to join their rotation with no rotation guarantee. Pilots who deadhead to join a rotation as a benefit of this policy are not subject to **Sections 8 F.** and **16 D. 1.**
- If the scheduler does not elect to deadhead the pilot, they will be removed from the rotation via personal drop (no pay or credit). Once released, the pilot is free to pick up a trip through the normal PCS process.

Possible Follow Up

- A pilot may be contacted by their CPO, or a seniority list instructor pilot may be contacted by their Fleet Captain, to discuss commuting strategies if their use of this benefit appears to have been excessive or inappropriate.
- If it is determined that the benefit has been misused, a pilot's future participation in the program may be reconsidered.

Daylight Savings Time and How it Affects Your Rotation

Most of the United States transitions to Daylight Savings Time each year around the end of winter and back to Standard Time midway through fall. These time changes often create challenges and questions with respect to scheduling and FAR/PWA legalities.

FDP, Duty Period, Short Call, and Rest Period Start and End Times

A pilot's report, departure, and arrival times will always be reflected in local time, regardless of Standard or Daylight Savings. At first glance, it may appear that certain time calculations are off by one hour. However, rest assured, they are still mathematically correct.

For example, the rotation below reports on the day prior to the onset of Daylight Savings Time (spring forward). Quick math using the report and release times would indicate a layover period in LGA of 18:36. However, because all times on B-Day are expressed in Daylight Savings Time, the actual layover time is 17:36, which is accurately depicted on the rotation and in bid package.

Similarly, the rotation releases at 2215L on B Day. Again, using quick math, total time away from base (TAFB) is 35:50. Remember, all times on B Day are expressed in Daylight Savings Time so the actual TAFB is 34:50 hours.

#4550	SA	EFFECTIVE MAR. 07 ONLY						CHECK-IN AT 10.25			
DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX

TOTALS---		10.59TL	10.59BL	.00CR	16.14FDP					TAFB 34.50	

Average Daily Guarantee (ADG)

PWA **Section 12 I.** provides that a pilot will receive ADG Carveout Pay of 2:00 pay, no credit for the last day of a rotation that has a release prior to 0200 local base time. If the rotation was scheduled or rerouted to release at or after 0200 local base time, then the pilot receives an additional ADG credit period in lieu of ADG Carveout Pay. Daylight Savings is automatically accounted for to ensure that a pilot receives full ADG credit for a day in which they have flown at least two hours.

For example, a pilot arrives on the last day of the rotation at 0145 local base time and releases at 0215 on the day that Daylight Savings Time ends (fall back). Because the transition back to Standard Time occurs at 0200L, the pilot's 0145 DST arrival will show, on paper, a 0115 Standard Time release. However, DBMS is programmed to recognize that the pilot was on duty for at least two hours on November 1 and will credit the pilot for ADG on that day.

Deadheading

General (8 D.)

- Deadhead transportation will not be booked on the jumpseat.
- Deadhead transportation for a pilot who:
 - *Is scheduled to deadhead at the end of a rotation*, will be booked on the flight(s) scheduled to return to base as soon as possible. (**Section 8 D. 3.**)
 - *Is scheduled to deadhead to a layover at the conclusion of a duty period*, will be booked on the flight(s) scheduled to reach the layover as soon as possible. (**Section 8 D. 4.**)
 - *Is scheduled to deadhead on an ocean crossing flight*, will be in a Delta One accommodations (**Section 16 D. 1.**).
- On a non-ocean-crossing flight with a scheduled block time of 3:45 or more during a duty period scheduled for more than 10:00 duty time will be assigned an available seat in the following order (**Section 8 F. 3.**) at the time the rotation is created or the deadhead leg is added to the rotation:
 - An aisle seat in an exit row
 - A window seat in an exit row
 - An aisle seat elsewhere in the coach cabin
 - A window seat elsewhere in the coach cabin
 - A middle seat in an exit row
 - Any seat in the coach cabin
- Report Time (**Section 2 A. 242.**)
 - The report time for a duty period that begins with an on-line deadhead or Delta Connection deadhead will be 60 minutes prior to departure time.
 - The report time for a duty period that begins with an off-line deadhead other than a Delta Connection deadhead will be 90 minutes prior to departure time.
 - The report time for a duty period that begins with an ocean-crossing deadhead that originates outside the continental U.S. will be 90 minutes prior to departure time.
 - The report time for a duty period that begins with a deadhead to or from Hawaii will be 60 minutes prior to departure time.
- Deadhead prior to ocean crossing (**Section 8 D. 5** and **8 D. 6.**)
 - Bid package rotations
 - A DH flight segment in the same duty period as an ocean crossing, will be scheduled to arrive 90 minutes prior to departure of the ocean crossing.
 - Rotations created after the publication of the bid package (rotation number usually starts with a zero) may, under certain circumstances, contain less than 90 minutes between the DH flight segment arrival and the departure of the ocean crossing flight segment. See **Section 8 D. 6.** for specific exceptions.

Deviating from Scheduled Deadhead (8 E.)

- Permission Required
 - A regular pilot does not need permission to deviate from a scheduled deadhead at the beginning or end of a rotation.
 - A reserve pilot must receive permission from Crew Scheduling to deviate from a scheduled dead-head at the beginning of a rotation.
 - A reserve pilot does not need permission to deviate from a scheduled deadhead at the end of a rotation.
- Effect on FARs
 - For the purposes of FAR Part 117, a pilot who deviates from a scheduled deadhead will be treated as if they had actually travelled on the scheduled deadhead segment(s).
- Effect on pay and per diem
 - The pay and credit and per diem of a rotation will not be affected by a pilot's decision to deviate from their scheduled deadhead.
- Lodging
 - A pilot who utilizes an off-rotation deadhead will be provided lodging as shown on their rotation, provided they notify Crew Scheduling of their desire to utilize such lodging.

- A pilot is responsible for their transportation to the lodging as shown on their rotation if their arrival time is different than the original DH flight's actual arrival time.
- Special considerations for MAC rotations.
 - A pilot deviating from deadhead on a MAC rotation will, upon their request, and provided that sales are authorized at the time of attempted booking, be provided positive space on-line transportation (including DCI) between a domestic airport in the vicinity of their permanent residence and:
 - the location (other than their base and subject to maximum scheduled duty time limits) where they join their rotation, and/or
 - the location from where they are scheduled to deadhead back to their base.

Deviating from Scheduled Deadhead at the Beginning of a Rotation (8 E. 8.)

- A regular pilot must notify Crew Scheduling of their intention to deviate during the 24 hours immediately preceding the report time for the originally scheduled deadhead segment.
- A reserve pilot must receive permission from Crew Scheduling to deviate at the beginning of a rotation.
- Positive Space Transportation (**Section 8 E. 8.**): A pilot who utilizes an off-rotation deadhead to travel from their base, or from a domestic airport or an airport in the Hawaiian Islands (other than their base) in the vicinity of their permanent residence, at the beginning of a rotation will be provided positive space on-line transportation if:
 - Company Business travel can be booked in TravelNet without overbooking,
 - the routing does not pass through the pilot's base,
 - the routing does not exceed the number of deadhead segments originally scheduled,
 - the routing is scheduled to arrive at a reasonable time before their required report under **Section 8 E. 5.**, and
 - the routing provides for a subsequent flight that is scheduled to arrive at a reasonable time before their required report under **Section 8 E. 5.** if the pilot's originally scheduled routing provided for such a subsequent flight.

Note one: A pilot who utilizes an off-rotation deadhead under **Section 8 E. 8.** may attempt their booking at any time within 14 days of the report of their rotation.

Note two: A pilot who utilizes an off-rotation deadhead at the beginning of a rotation that does not satisfy the requirements of **Section 8 E.8.** will be responsible for their transportation.

Note three: A pilot who is provided a positive space reservation for an off-rotation deadhead under **Section 8 E. 8.** will make every effort to cancel such reservation in TravelNet if the pilot no longer requires or intends to use the reservation.

Deviating from Scheduled Deadhead at the End of a Rotation (8 E. 9.)

- No permission is required for a regular or reserve pilot to deviate, but Crew Scheduling must be notified as soon as possible after the arrival of the last non-deadhead segment. This notification may be accomplished via a call to the scheduler or the IVR.
- Contractual break in duty and rest for FAR purposes will begin at the originally scheduled release time.
- Positive-space transportation (**Section 8 E. 9.**) - A pilot who utilizes an off-rotation deadhead at the end of a rotation to travel to:
 - his base prior to their scheduled deadhead will be provided positive-space on-line transportation if sales are authorized at the time of their attempted booking.
 - a domestic airport or an airport in the Hawaiian Islands (other than their base) in the vicinity of their permanent residence will be provided positive space on-line transportation if:
 - sales are authorized at the time of the attempted booking,
 - the routing does not pass through the pilot's base,
 - the routing does not exceed the number of deadhead segments scheduled, and
 - the flight segment(s) departs:
 - prior to the originally scheduled deadhead, or
 - on the same day as the originally scheduled deadhead.

Note one: A pilot deadheading under **Section 8 E. 9.** may attempt their booking at any time after the report of their rotation.

Note two: A pilot who utilizes an off-rotation deadhead at the end of a rotation that does not satisfy the requirements of **Section 8 E. 9.** will be responsible for their transportation.

Note three: A pilot who is provided a positive space reservation for an off-rotation deadhead under **Section 8 E. 9.** will make every effort to cancel such reservation in TravelNet if the pilot no longer requires or intends to use the reservation.

FAR Violation Caused by Daily Trip Coverage (23 P. 5. f. & 23 T. 3. a. 1. Exception two)

If a pilot is awarded a WS/YS that creates an FAR/PWA conflict with a rotation in the subsequent bid period, the rotation in the subsequent bid period will be dropped without pay. *A pilot may be awarded a white slip or yellow slip in the current bid period that will create an FAR and/or PWA conflict with a rotation in the next bid period. The conflicting rotation in the next bid period will be removed from the pilot's line. The pilot's projection/line guarantee will be reduced by the credit of the removed rotation.*

The PCS templates contain a check box to allow a pilot to avoid an award that would result in a rotation being dropped from their subsequent bid period line. Shown next is the screen applicable for white slip requests:

Crew

Pre-Flight | Schedules | Bids | Bid Packages | Bulletins | Pay/Hours | Personnel | NRSA | Email | Flight Ops | Print | Help | LogOff

White Slip Request In Base

Employee: Seniority: Bid period: Category:

Process this request until (mm/dd/yyyy) @ 23:59E

Award next-day flying on 0700E PCS run? No

Award even if it requires dropping a rotation next Bid Period for NO PAY:

If On Duty or in Sim Period acknowledge awarded rotation:

The default selection is "Yes." To avoid an award that would drop a conflicting rotation simply use the drop down arrow to select "No."

Award even if it conflicts w/ rotn next Bid Period? No ▼

Minimum Connection Times

Minimum connection times that are used between flights on a pilot's rotation vary based upon a number of factors, including the types of operations being conducted, whether the rotation is being scheduled or rerouted, etc.

The Basics

To be considered a legally constructed rotation under the PWA (published bid package and post-bid created rotations alike), all turn times within a duty period must comply with the table below.

Minimum Connection Times

	Bid Package Rotation Construction (Crew Planning)	Post-Bid Created Rotations (Scheduling or Tracking)	Reroutes (Tracking)
Connecting (DH/Op) to a Flying Leg (Excludes same ship) ¹	DOM-DOM: 30 minutes DOM-INTL: 30 minutes DOM-Transoceanic: 90 minutes INTL-DOM: 90 minutes ^{3 4} INTL-INTL: 90 minutes ^{3 4}		<u>No scheduled MCT</u> DOM-DOM, DOM-INTL: 30-minute average per turn within the same FDP, to be included in duty period calculations for FAR/PWA limitations DOM-Transoceanic ² , INTL-DOM, INTL-INTL: 90 minutes to be included in duty period for FAR/PWA limitations ^{3 4}
Connecting (DH/Op) to DH Leg (Excludes same ship) ¹	Greater of DeltaNet MCT Table or 30 Minutes ^{5 6}		
Same Ship ¹	DOM-DOM, DOM-INTL: 30 minutes DOM-Transoceanic ² , INTL-DOM, INTL-INTL: 90 minutes ^{3 4}		<u>No Scheduled MCT</u> DOM-DOM, DOM-INTL: When initially built, 30-minute average per turn within the same FDP to be included in duty period for FAR/PWA limitations DOM-Transoceanic ² , INTL-DOM, INTL-INTL: 90 minutes to be included in duty period for FAR/PWA limitations ^{3 4}

Co-Terminal MCT Calculation: 30 min + 8.B.3 Contractual Ground Deadhead Time + 1 hour

¹ DL Network Scheduling plans inbound/outbound flight number pairs. This data drives when crews will stay with aircraft or not. See "Final Schedule" at <https://deltaairlines.sharepoint.com/company/NetworkPlanning/Integrity> to determine inbound/outbound flight number planning.

² Excludes Hawaii stations; Operate to Operate connections to transoceanic Hawaii flights will have a minimum connection time of 60 minutes. Deadhead to Operate will have a minimum connection time of 90 minutes per 8.D.6. (ex. DHD SFO-LAX MCT is 90 minutes in LAX)

³ When inbound to the US from a pre-cleared station (<https://deltaairlines.sharepoint.com/company/NetworkPlanning/Integrity> - Bank Structure Report) use DOM-

DOM when calculating the MCT at that US station. Ex: YYZ-MSP-IND - MCT is 30 min as YYZ is pre-cleared and the crew would not have to clear customs upon arriving in MSP.

⁴ Excludes turns where the crew is planned to stay onboard the aircraft AND not clear customs, which for MCT purposes will be considered DOM-DOM (30 minutes), for same ship 30 minutes will be included in duty period. The airport list is updated and published monthly within the bid packages. Delta is granted an exception to the MCT table within the SRH for Charter flights, when expedited Special CBP handling is noted on a rotation at the time it is created.

⁵ When arriving from an international pre-cleared station (<https://deltaairlines.sharepoint.com/company/NetworkPlanning/Integrity> - Bank Structure Report) use the DOM-DOM or DOM-INTL column of the MCT table posted on Delta-Net (as applicable) when determining MCT times.

⁶ The DeltaNet MCT can be found on DeltaNet under My Division → Crew Resources → Misc: Min Connection Table for DH Flights. Please note, connection times in the linked table are subject to change.

Definitions:

DOM (Domestic)- Section 2 A. 83. “Domestic operation” means a flight segment to and from an airport, or between airports, located inside the contiguous 48 states of the United States, or a flight segment between an airport located in the Mainland United States and Alaska.

INTL (International) - Section 2 A. 139. “International operation” means a flight segment to or from an airport, or between airports, located outside the contiguous 48 states of the United States.

Exception: A flight segment between an airport located in the mainland United States and Alaska will not be considered an international operation.

MCT Examples & Walkthroughs:

1. ATL-CUN-ATL (INTL-INTL) Bid Package or Post-Bid Package Rotation (both legs operating)

a) Aircraft Swap: 90-minute MCT in CUN

- Enter the MCT table on the 1st row “Connecting to Flying Leg” since this is NOT same-ship. Since this is INTL-INTL the MCT would be 90 minutes in Cancun. Footnotes 3 or 4 do not apply.

b) Same Ship: 30-minute MCT in CUN

- Enter the MCT table on the 3rd row: “Same Ship”. Normally we would use the INTL-INTL MCT on the table for determining the MCT of 90 minutes in Cancun, however footnote 4 directs us to use the DOM-DOM times as Cancun allows crews to stay on the aircraft during same day and same aircraft turns.

ATL	PILOT 320	*** ROTATION OPER								
L663	POS-AB	EFFECTIVE MAR14				CHECK IN AT 6.13				
						ACTUAL REPORT TIME 0613				
DAY	FLT	T	DEPARTS	ARRIVES	C	BLK	M/U	TURN	M	EQP
14	2014	ATL	0713	CUN 0900		2.47		1.00M	321	2
	2013	CUN	1000	ATL 1350		2.50		1.30		2
	D1008	ATL	1520	CVG 1644		1.24			739	2
								1.24DHD		
CVG	12.46/HYATT		CVG DTWN			5.37BL		7.01TL		

2. CUN-ATL-SRQ (INTL-DOM) Bid Package or Post-Bid Package Rotation (both legs operating)

a) Aircraft Swap: 90-minute MCT in ATL

- Enter the MCT table on the 1st row: “Connecting to Flying Leg”. Arriving FROM CUN in ATL and connecting TO SRQ, we use the INTL-DOM MCT time of 90 minutes. Footnote 3 does NOT apply as Cancun is NOT a pre-cleared station. Referencing the “Final Schedule” table (per footnote 1) on DeltaNet showed that this turn was a planned aircraft swap.

b) Same Ship: 90-minute MCT in ATL

- | | | | | | | | | | |

				2.53DHD			
				8.25BL			

8. ATL-LGA-Surface DH JFK-MSP Bid Package or Post Bid Package Rotation (Co-Terminal MCT) 2:15 MCT between the arrival in LGA and the scheduled departure for JFK.
 - o Using the note under the MCT Table for Co-Terminal MCT Calculations we add 30 minutes (post flight) + 45 min ground deadhead time (Section 8 B. 3. time for LGA-JFK) + 1:00 preflight = 2:15 from block in at LGA to block out in JFK. Any time scheduled less than this would be an MCT violation.
 - o Of note, the MCT would be 2:15 regardless if operating or deadheading into and/or out of either airport.

If you are awarded or assigned a rotation that uses less than these times, then the rotation award/assignment violates the PWA and should be handled as follows:

1. Call Crew Scheduling to request that you be released from the rotation with full rotation guarantee and no recovery obligation. If a regular pilot, or released back into on-call status if a reserve pilot
 - a. If more than two hours remain prior to report, you should be released from the rotation
 - b. If within two hours of report, you will likely be made to fly the rotation
2. This is considered a “fly now, grieve later” violation, so if after contacting Crew Scheduling and your Chief Pilot you’re still made to fly the rotation, you should comply
3. Then please recontact each of these parties as necessary **AFTER** you complete the rotation to request the appropriate pay remedy
 - a. If you reported the violation more than two hours prior to report and are a regular pilot, you are due single pay and credit plus double pay, no credit for the value of the rotation
 - b. If you reported the violation more than two hours prior to report and are a reserve pilot, you are due single pay and credit (toward your reserve guarantee) plus single pay, no credit (above your reserve guarantee) for the value of the **affected duty period**
 - c. In either case, the pilot that would otherwise have been awarded/assigned the correct rotation is due single pay and credit for the value of the rotation
 - d. If you reported (or discovered) the violation within two hours of report, you are due single pay, no credit for the applicable duty period in addition to any other form of pay for the rotation
4. If you are unable to reach a satisfactory conclusion, please submit a **STS Report** via the Scheduling Ticketing System (STS) link on the Delta MEC website.

Rerouted Rotations (Not to Include Late Operations)

To be considered a legal reroute under the PWA, either:

1. The average turn time within a duty period must comply with the Reroute column of the MCT table *and* the turn time between the last two legs must comply with the minimum applicable turn time, or
2. The rotation must be annotated that additional duty time has been added due to the insufficient turn time(s).

Example:

- Enroute to ATL from ALB, consider the following ATL-PBI-ATL reroute below:

```

PWA REPORT TIME 0506/09    ACTUAL REPORT TIME 0506/09
9 2429 ALB 0606 ATL 0859 2.53    0.26 321
    1527 ATL 0925 PBI 1119 * 1.54    1.06M
      *PBI 1225 ATL 1425 2.00
          6.47BL
                      6.47TL
                      0.36TRP
          PWA FDP/SKD MAX/ACT MAX |9.19/11.30/14.00
B- LAST ACCLIMATED CITY-ATL REST CLASS- 12.00/14.00/ 9.00
      0.30MCD 0.36TRP 0.12DPA 1.43ADG
REGULAR--15.45TL 12.39BL 3.01CR 0.05MU
RESERVE- 15.45TL 12.39BL 3.01CR 0.05MU
ROT GUAR POS B - N/A

```

As we can see in the rotation above, there is no annotation that additional duty time has been added due to the ATL-PBI turn time of less than the 30-minute required MCT. The lack of that note in this scenario *would* normally be considered a MCT violation. However, because the *average* turn times in the flight duty period are at least 30 minutes (46 minutes actual) *and* the turn time between the last two legs is at least 30 minutes, this is a PWA compliant reroute with no MCT violation.

On the other hand, had the first turn time been 1:06 and the second turn time :26, an annotation saying that an additional time had been added to the FDP due to turn time less than 30 minutes would have been required.

If you are rerouted into a turn time that violates the rule above AND your rotation does not have the required annotation, then this reroute violates the PWA and should be handled as follows:

1. Call Crew Tracking to request that they show the Note and corrected FDP time to your rotation so that you can properly determine your LATT, FAR 117, and PWA limits and legalities.
2. You should not acknowledge or operate an FDP that does not correctly show your FDP and associated limits. If you need to stop the operation to ensure the reroute is legal, then please do so.
3. If you are unable to reach a satisfactory conclusion, but you determine that the reroute is FAR 117 compliant, contact the Scheduling Committee via the Scheduling Ticketing System (STS) link on the Delta MEC website.

Late Operations

If a flight on your rotation is delayed such that your turn time falls below the minimum required in the Minimum Connection Times table, Crew Tracking is not required to reroute you or delay your next flight to increase your turn time. Rather, you should proceed to operate your next flight without rushing through your preflight procedures. At that point, your connection time is for scheduling purposes only, and your actual departure time will be based upon readiness of your crew and completion of passenger boarding.

The Caveats

- These are contractual *minimum* connection times that the Company has agreed to use as indicated above for PWA legality. The Company may set longer actual connection times at their discretion based on operational requirements.
- These minimum connection times are for scheduling purposes only. They do not apply to late operations, and the Company is not required to reroute a pilot or delay a flight to accommodate a minimum connection time.
- Bid package rotations and post-bid created rotations will always contain a minimum turn time that complies with the table above, including same ship turns.

- The Company maintains a pilot MCT Table for minimum connection times greater than 30 minutes at various airports. When connecting from an operating flight to a deadhead flight on a different aircraft, please refer to this document, which can be found on the Crew Resources/Scheduling page on DeltaNet under the “Misc.” section. Note this table is subject to change from month to month.
- A pilot may be rerouted into a connection time that is shorter than is shown in the table above in order to avoid unnecessary delays for passengers on the affected flights. ***However, a pilot’s indicated duty period and/or FDP length on their then current rotation will always be based upon a connection time of at least the connection times shown in the table above.***
- While there is no contractual minimum connection time when a pilot is operating or deadheading on the same aircraft as their inbound leg, it will obviously take time to deplane the inbound flight, clean the aircraft, and board the outbound flight’s passengers. ***Again, the pilot’s rotation will always show a duty period or FDP length based upon a turn time that complies with the table above.***
- Under no circumstances should a pilot who is scheduled to operate a flight feel compelled to rush through their preflight procedures to satisfy these connection times. They are for scheduling purposes only, and actual departure times will continue to be based upon readiness of the crew and completion of passenger boarding.

Conclusion

So long as a pilot’s turn time is scheduled (not rerouted) to comply with the minimum times shown in the table above, the pilot’s rotation is in compliance with the PWA. Regardless of whatever turn time is shown, whether scheduled or actual, the pilot’s duty period or FDP length will always be adjusted in real time to reflect a turn time of no less than the minimum connection times shown in the table above.

Regular First Officers Removed for OE, and Regular Pilots Removed for Special Airport Qualification (23 G. 5.)

A regular first officer *may be* removed from their rotation or a portion of their rotation for the purposes of conducting another pilot's OE, and a regular pilot *may be* removed from their rotation or a portion of their rotation for the purposes of conducting another pilot's SAQ. In either case, the removed pilot will receive rotation guarantee and will not be subject to recovery flying. A pilot viewing a future rotation may see that it is scheduled for OE or SAQ, but they remain obligated to fly that rotation until they have been officially notified of their removal. The removal may occur at any time prior to or after the pilot has reported for the rotation, at the Company's discretion.

Section 23 G.5.—First Officer Removal for OE, Augmented Crew

When a first officer is to be removed from an augmented crew for another pilot's OE, the senior first officer will be afforded the option of being removed or flying, even when one or both first officers are not on the identical rotation as the LCP, provided doing so does not increase the number of deadhead segment(s) or hotel requirements beyond those that existed in the original first officer rotations. If it is not possible to remove a first officer without creating an additional deadhead segment(s) or hotel requirement(s), and the removal of either first officer would create an equal amount of total additional deadhead segments and hotel requirements, then the senior first officer will be afforded their option.

If the senior first officer is unavailable for contact, it will be assumed that they desire to be removed, unless they have indicated their preference not to be removed in the Comments section of the Telephone Information screen in iCrew.

Example 1: 7ER; OE Flights 196/06 & 197/08:

```
ATL 2395 7ER POS-A/B EFFECTIVE

ARRIVES
04 L 1 JFK 2100 LHR
0925 LHR 22.15/HOL INN
KENSINGTON
06 4 LHR 0940
JFK FIRST OFFICER DOE

Result: Only First Officer Smith could be removed. This will result in one additional deadhead segment. Removal of First Officer Doe from Flight 1 would also require removal of another first officer from Flight 41, resulting in two additional deadhead segments. Similarly, removal of First Officer Jones from Flight 41 would also require the removal of another first officer from Flight 1, resulting in two additional deadhead segments.

Rotation Construction Committee

The Rotation Construction Committee (RCC) is the primary conduit of rotation and bid package information between the pilot group and the Company. The RCC works closely with Company Crew Planners to review trip quality and trip mix for each category and will communicate any changes, improvements or modifications to the pilot group.

The Structure and Purpose of the RCC

The RCC is a subcommittee of the MEC Scheduling Committee and is staffed by pilot volunteers. The RCC chairman oversees RCC base volunteers from each base. The base volunteers are the conduits between the pilots, their LECs, and the RCC chairman regarding rotation construction. The RCC chairman in turn works directly with Crew Planning to address the issues brought to the committee's attention.

The purpose of the RCC is to review trip quality and mix for each category and communicate with the pilot group any information that affects trip mix or quality. The committee serves as the line pilot's primary point of contact for any rotation construction questions or concerns.

The Process

An important tool for the RCC is the Company's rotation optimizing program. It is a Jeppesen-Sanderson product which has been in use by Delta Crew Planning for many years. It is a common software tool in the global airline industry, and its primary purpose is to minimize synthetic credit (credit that is not block time). The program optimizes flight segments throughout an entire fleet, not any particular category. Since the program considers all flight segments system wide, the testing of a bid package improvement in one base must be thoroughly examined for any negative unintended consequences in another.

Rotation Guarantee

Sections 4 E. and F. provide the conditions under which a regular line holder will receive the original total value of an awarded rotation. Specifically, **Section 4 F.** provides that a regular line holder will receive no less than the scheduled credit of such rotation, plus all pay, no credit applicable under ADG Carveout Pay, Sit Pay, and Extended Duty Period Pay. As rotation guarantee is always pay and credit, these aspects of a rotation's value that were originally pay, no credit become pay and credit when applied to a regular pilot's rotation guarantee.

If a regular pilot is rerouted, the total value of their new rotation as flown (including any new applicable pay, no credit items) will be compared to the total value of their original rotation. The pilot will receive no less than the total value of their original rotation, with any difference being applied as pay and credit rotation guarantee.

A reserve line holder is not guaranteed the original value of a rotation from which they are removed or rerouted. As such, they may be subject to losing the value of any portion of their rotation that is not operated as scheduled. However, any pay, no credit that is due under the rerouted rotation will always be paid above their reserve guarantee.

In addition to all other forms of pay and/or credit, a pilot will receive any reroute pay due under Section 23 L.

Holiday Pay

Unlike other forms of soft pay, Holiday Pay is not a part of a regular pilot's rotation guarantee, and the rotation as flown must touch a holiday to be eligible for Holiday Pay. However, an early arrival will not prevent a pilot from receiving Holiday Pay that would otherwise be due, even if the early arrival causes the pilot to no longer operate or release on the holiday.

A pilot may be removed from the entirety or a portion of a rotation under Section 23 K., Section 23 G. 5., by a reroute, a mid-rotation sick or fatigue call, a FAR conflict in the rotation or caused by a preceding rotation, or lack of a required pilot qualification. Should such removal cause the pilot's resulting schedule to no longer touch the qualified Holiday, they will not receive the corresponding Holiday Pay.

For example, the following rotation **is scheduled to arrive on C day, one day prior to a designated Holiday, but** releases at 0014 on a holiday that will generate Holiday Pay. **Because the release time touches the holiday, the pilot is due Holiday Pay.**

DAY	FLIGHT T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX
A	674	LAX 0715	SEA 1002	2.47	1.17	3NE	M			2
	434	SEA 1119	JFK 1959	5.40			M	10.44/13.00	10.44/12.30	2
	JFK 23.31	SHERATON	TIME SQUARE				8.27/ 9.00	.00CRD	8.27TL	
B	476	JFK 2100	SAN 0016	6.16			M	7.16/12.00	7.16/11.30	2
	SAN 15.39	WESTIN	SAN DIEGO				6.16/ 9.00	.00CRD	6.16TL	
C	362	SAN 1725	SLC 2025	2.00	2.20	321				2
	1268	SLC 2245	LAX 2344	1.59				7.19/12.00	7.19/11.30	2
							3.59/ 9.00	.18DTY	4.17TL	
							2.30MCD	.00TRP	.00DPA	.00ADG
TOTAL CREDIT		21.30TL	18.42BL	2.48CR	25.19FDP				TAFB	65.59
TOTAL PAY		30:09TL	.10SIT	1.14EDP	5.15HOL			2.00CARVE		

Scenario 1: The rotation is flown as scheduled. This results in a rotation value of 21:30 pay and credit, plus 8:39 pay, no credit (Sit Pay of :10, EDP Pay of 1:14, Holiday Pay of 5:15, and ADG Carveout of 2:00).

Scenario 2: DL 1268 blocks in early at 2329, with a rotation release of 2359 on C Day. The pilot will not lose Holiday or ADG Carveout Pay due to the early arrival. This results in a rotation value of 21:30 pay and credit, plus 8:39 pay, no credit (Sit Pay of :10, EDP Pay of 1:14, Holiday Pay of 5:15,

and ADG Carveout of 2:00).

Scenario 3: A change to the rotation occurs (reroute or removal) such that the resulting rotation as flown no longer touches the holiday or has a turn time greater than two hours on C Day. Given that Holiday Pay is NOT part of a regular pilot's rotation guarantee, this results in a rotation value of 23:40 pay and credit, plus 1:14 pay, no credit (EDP Pay). A regular pilot's Sit Pay of :10 and ADG Carve Pay of 2:00 will be returned in the form of Pay and Credit as part of their rotation guarantee. For a reserve pilot, these values would be the same minus the value of the Sit Pay and ADG Carve Pay. Additional pay may be due depending on the nature of the change (e.g. a reroute).

It should be noted that a pilot who flies two rotations, each of which touch the same holiday, will receive Holiday Pay for each rotation. For example, a pilot arrives from a redeye early in the morning on a holiday and who subsequently reports for a rotation later that same evening after a legal break, will receive two instances of Holiday Pay. Additionally, as long as the rotation touches the holiday, it is NOT necessary for there to be a duty period on the holiday in order for a pilot to be entitled to Holiday Pay (e.g. a layover that extends across the entire footprint of the holiday).

Sit Pay

DAY	FLIGHT	T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX
A	674		LAX 0715	SEA 1002		2.47	3.28	3NE	M		2
	2372		SEA 1330	LAX 1610		2.40				9.55/13.00	9.55/12.30 2
										5.27/ 9.00	.00CRD 5.27TL
										.00MCD .00TRP .00DPA .00ADG	
TOTAL CREDIT			5.27TL	5.27BL		.00CR		9.55FDP			TAFB 10.25
TOTAL PAY			6:36TL	.44SIT		.25EDP		.00HOL		.00CARVE	

The rotation above includes Sit Pay of :44 due to the 3:28 scheduled turn time. This drives a rotation value of 5:27 pay and credit, plus 1:09 pay, no credit if the rotation is flown as scheduled (the rotation also generates EDP Pay of :25). So long as the pilot is not rerouted, the Sit Pay of :44 will remain, even if flight 674 arrives early or late, or if flight 2372 is delayed.

If the pilot is rerouted, however, the amount due under Sit Pay may change, depending upon the turn times for the new flight segments. For example, were the pilot to be rerouted into operating LAX - SEA - SFO - LAX with no turn time greater than two hours, Sit Pay would no longer be due. While Sit Pay will show correctly on a pilot's original rotation, Sit Pay for a pilot who has been rerouted will be handled manually by Crew Scheduling.

For a regular line holder, the total value of their new rotation as flown (including any new applicable pay, no credit items) would be compared to the total value of their original rotation - 6:36. The pilot would receive no less than the total value of their original rotation, with any difference being applied as pay and credit rotation guarantee, plus pay, no credit for any applicable reroute pay.

A reserve pilot would receive pay and credit only for the flying they perform, applied against their reserve guarantee, plus pay, no credit for any applicable reroute pay (paid above their reserve guarantee).

ADG Carveout Pay

DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX
A	424	LAX 1515	MSP 2054	3.39	1.01 321 M				2
	1441	MSP 2155	LAS 2320	3.25			9.05/12.00	9.05/11.30	2
		LAS 15.47/SIGNATURE	AT MGM GRA			7.04/ 9.00	.00CRD	7.04TL	
B	466	LAS 1637	ATL 2335	3.58			4.58/12.00	4.58/11.30	2
		ATL 21.47/GRAND	HYATT BUCKHEAD			3.58/ 9.00	.00CRD	3.58TL	
C	359	ATL 2252	LAX 0032	4.40		M 5.40/12.00	5.40/11.30	2	
						4.40/ 9.00	.00CRD	4.40TL	
					2.30MCD	.00TRP	.00DPA	.00ADG	
TOTAL CREDIT	18.12TL	15.42BL	2.30CR	19.43FDP				TAFB	58.47
TOTAL PAY	20:12TL	.00SIT	.00EDP	.00HOL		2.00CARVE			

The above rotation includes ADG Carveout of 2:00 because the rotation is scheduled to release between 0000 and 0159 (inclusive). This drives a rotation value of 18:12 pay and credit, plus 2:00 pay, no credit if the rotation is flown as scheduled. The ADG Carveout of 2:00 will continue to be due for both a regular or a reserve pilot, even if flight 359 arrives early such that the pilot is released prior to 0000.

On the other hand, if the last flight is delayed such that the rotation releases at 0200 or later, the 2:00 pay, no credit is compared to an additional ADG for that rotation, and a regular or reserve pilot will receive whichever pay treatment results in the greater total value. For example, were ATL - LAX delayed such that it arrived at 0139 (releasing at 0209), the result of retaining ADG Carveout Pay vs gaining an additional ADG would be compared. A regular or reserve pilot would receive the greater value, but no less than 20:12 pay and credit (the original total pay for the rotation).

If the pilot is rerouted on C Day such that they are released outside the 0000-0159 window, ADG Carveout would no longer be reflected on the rotation. For example, were the pilot to be rerouted to an earlier flight on C Day such that they release at 2359 or earlier, ADG Carveout of 2:00 would no longer be due.

For a regular line holder, the total value of their new rotation as flown (including any new applicable pay, no credit items) would be compared to the total value of their original rotation - 20:12. The pilot would receive no less than the total value of their original rotation, with any difference being applied as pay and credit rotation guarantee, plus pay, no credit for any applicable reroute pay.

A reserve pilot would receive pay and credit only for the flying they perform, applied against their reserve guarantee, plus pay, no credit for any applicable reroute pay (paid above their reserve guarantee).

Extended Duty Period Pay (EDP)

DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX
A	2666	SLC 1755	SAN 1851	1.56		321	2.56/12.00	2.56/11.30	2
		SAN 14.39/WESTIN	SAN DIEGO			1.56/ 9.00	.04DPM	2.00TL	
B	725	SAN 1100	ATL 1824	4.24	1.31	M			2
	660	ATL 1955	SLC 2159	4.04		M 10.59	14.00	10.59/13.00	2
						8.28/ 9.00	.00CRD	8.28TL	
					.30MCD	.00TRP	.00DPA	.00ADG	
TOTAL CREDIT	10.58TL	10.24BL	.34CR	13.55FDP				TAFB	29.34
TOTAL PAY	12:27TL	.00SIT	1.29EDP	.00HOL		.00CARVE			

The above rotation includes EDP Pay of 1:29 because B Day of the rotation is scheduled for a duty period of 11:29 from report to release (10:59 FDP plus a 30-minute release). This drives a rotation value of 10:58 pay and credit, plus 1:29 pay, no credit if the rotation is flown as scheduled. So long as the pilot is not rerouted, the EDP Pay will continue to be due for both a regular or a reserve pilot, even if flight 660 arrives early such that the duty period is shorter than scheduled. If the flight arrives later than scheduled, or if the pilot's release is delayed for some other reason, then EDP Pay will increase

accordingly on a minute-by-minute basis.

If the pilot is rerouted such that they no longer operate a duty period greater than ten hours in length, the EDP Pay would no longer be reflected on the rotation.

For a regular line holder, the total value of their new rotation as flown (including any new applicable pay, no credit items) would be compared to the total value of their original rotation - 12:27. The pilot would receive no less than the total value of their original rotation, with any difference being applied as pay and credit rotation guarantee, plus pay, no credit for any applicable reroute pay.

A reserve pilot would receive pay and credit only for the flying they perform, applied against their reserve guarantee, plus pay, no credit for any applicable reroute pay (paid above their reserve guarantee).

Minimum Calendar Day (MCD)

DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX
A	2606	LAX 1610	SFO 1728	1.18	1.00	320 M			2
		SFO 1828	LAX 2004	1.36	1.06				2
	2659	LAX 2110	PDX 2328	2.18		319	8.18/12.00	8.18/11.30	2
		PDX 16.33/HILTON	VANCOUVER WA			5.12/	9.00	.00CRD	5.12TL
B DH	2631	PDX 1731	SLC 2025	1.54	2.50	739			
	2235	SLC 2315	SMF 2359	1.44		320	7.28/12.00	7.28/11.30	2
							1.54DHD		
		SMF 15.56/HYATT	CENTRIC			1.44/	9.00	.46DTY	4.24TL
C	2812	SMF 1725	SLC 2000	1.35	2.45				2
	1268	SLC 2245	LAX 2344	1.59		321	7.19/12.00	7.19/11.30	2
						3.34/	9.00	.43DTY	4.17TL
						2.30MCD	.00TRP	.00DPA	.00ADG
TOTAL CREDIT	16.23TL	10.30BL	5.53CR	23.05FDP				TAFB	57.04
TOTAL PAY	18:23TL	.48SIT	.00EDP	.00HOL	2.00CARVE				

The rotation above includes MCD Pay of 2:30 because there is no flying attributable to a duty period or FDP that begins on the day after C Day of the rotation. This 2:30 is a part of the total pay and credit of 16:23 for the rotation. So long as the pilot is not rerouted, MCD Pay will continue to be due for both a regular or a reserve pilot, even if flight 1268 arrives early such that the pilot is released at 2359 or earlier.

If the pilot is rerouted such that they release at 2359 or earlier on C Day, MCD Pay would no longer be reflected on the rotation.

For a regular line holder, the total value of their new rotation as flown (including any new applicable pay, no credit items) would be compared to the total value of their original rotation - 18:48. The pilot would receive no less than the total value of their original rotation, with any difference being applied as pay and credit rotation guarantee, plus pay, no credit for any applicable reroute pay.

A reserve pilot would receive pay and credit only for the flying they perform, applied against their reserve guarantee, plus pay, no credit for any applicable reroute pay (paid above their reserve guarantee).

Comprehensive Example

DAY	FLIGHT T	DEPARTS	ARRIVES C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX

TOTAL CREDIT	26.25TL	23.52BL	2.33CR	35.04FDP				TAFB	91.23
TOTAL PAY	37:16TL	.08SIT	3.28EDP	5.15HOL	2.00CARVE				

Assume the rotation above is scheduled to release at 0028 on Thanksgiving Day. Its value is 26:25 pay and credit (including MCD Pay of 2:30), plus 10:51 pay, no credit (including Sit Pay of :08, EDP Pay of

3:28, Holiday Pay of 5:15, and ADG Carveout of 2:00), for a total value of 37:16. So long as the pilot is not rerouted, these pay treatments will remain, although EDP Pay will increase with any increases to the length of B and C Days and ADG Carveout could be replaced by an additional ADG if the rotation releases at 0200 or later.

However, suppose the pilot is rerouted to fly to LAX on C Day, as shown in the rotation below, and then surface deadhead back to ONT.

DAY	FLIGHT	T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX	
A	2027		ONT 0605	SLC 0855		1.50	2.05	320 M				2
	2630		SLC 1100	SAN 1158		1.58		3NE	6.53/12.00	6.53/11.30		2
			SAN 21.32/WESTIN	SAN DIEGO				3.48/	9.00	.03DTY	3.51TL	
B	725		SAN 1100	ATL 1824		4.24	2.07	321 M				2
	1251		ATL 2031	TUS 2118		3.47			11.18/14.00	11.18/13.00		2
			TUS 13.12/GRADUATE	TUCSON				8.11/	9.00	.00CRD	8.11TL	
C	1039		TUS 1200	LAX 1344		1.44			2.44/14.00	2.44/13.00		2
								1.44/	9.00	.16DPM	2.00TL	
								.30MCD	.00TRP	.00DPA	1.16ADG	
TOTAL CREDIT	15.45TL		13.43BL			2.02CR	35.04FDP				TAFB	91.23
TOTAL PAY	17.39TL		.06SIT			1.48EDP	.00HOL		.00CARVE			

As flown, this rotation now has a value of 15:45 pay and credit (including DPM of :16, MCD Pay of :30, and ADG of 1:16), plus 1:54 pay, no credit (Sit Pay of :06 and EDP Pay of 1:48), for a total value of 17:39.

For a regular line holder, this total value of 17:39 will be compared to the total value of their original rotation, not including the Holiday Pay - 32:01. The pilot will receive 15:45 pay and credit, plus 1:54 pay, no credit, plus 14:22 pay and credit (rotation guarantee for the difference between the total value of the original rotation and the new rotation), plus :52 pay, no credit (one-half pay for the rerouted leg).

A reserve pilot would receive 15:45 pay and credit (applied toward their reserve guarantee), plus 1:54 pay, no credit (paid above their guarantee), plus :52 pay, no credit (one-half pay for the rerouted leg, paid above their guarantee).

Neither the regular nor the reserve pilot will receive Holiday Pay, as they are no longer working on the holiday due to the reroute.

Summary

- An early arrival will have no effect on a pilot's pay
- A regular line holder's rotation guarantee will always include the full value of their rotation, not to include Holiday Pay in some circumstances, and is always pay and credit
- Reroute pay is in addition to all other pay for a rotation
- A pilot who flies two rotations which touch the same holiday will receive Holiday Pay for each rotation
- As a reminder, soft pay other than Duty Period Minimum, are applied to the last day of a rotation (not necessarily the day to which it applies)

Rotation Pay Calculation

Per **Section 12 L. 1.**, when a rotation is constructed, its value for pay and credit purposes is the greater of the pay applications described below:

- a. ADG (**Section 12 I.**), if applicable,
- b. Rotation credit (**Section 12 K.**), or
- c. The sum, on a duty period basis, of the greater of the duty period credit (**Section 12 J.**), DPM (**Section 12 H.**), or scheduled flight time for each duty period in the rotation
- d. The sum, on a daily basis, of the greater of the duty period credit (**Section 12 J.**), DPM (**Section 12 H.**), minimum calendar day (**Section 12 U.**), or scheduled flight time for each calendar day in the rotation.

This pay and credit is the amount that will be applied to a pilot's LCW in PBS, their projection for purposes of a full service bank transaction, the WS/YS pickup limit, a regular line holder's GS trigger, and a reserve pilot's guarantee. This is the amount that will be doubled for a regular line holder's GS/IA pay.

To this pay and credit value are added pay, no credit due under Holiday, ADG Carveout, Sit Pay, or Extended Duty Period Pay. This amount will NOT apply to the LCW in PBS, a pilot's projection, and will not be doubled in the case of a GS/IA. A reserve pilot will receive this pay above their reserve guarantee.

Holiday Pay (3 K.)

Any rotation that touches a listed holiday will receive an additional ADG (5:15) pay, no credit for each holiday touched by the rotation in addition to any other form of pay for the rotation.

- "Holiday" for purposes of this provision is defined as: Memorial Day, Independence Day, Thanksgiving Day, Christmas Eve, Christmas Day, New Year's Eve, and New Year's Day
- Holiday Pay applies only to the holiday itself
- Holiday Pay is pay, no credit and will be paid in addition to all other pay which the pilot is entitled
 - *Example A: A reserve line holder who flies a three-day rotation worth 17:00 that touches a listed holiday will receive 17:00 pay and credit (applied against their reserve guarantee), plus 5:15 pay, no credit (above their reserve guarantee)*
 - *Example B: A reserve line holder who flies the same rotation as a GS or IA will receive 17:00 pay, no credit, plus 5:15 pay, no credit for the rotation for a total of 22:15 pay, no credit above their reserve guarantee*
 - *Example C: A regular line holder who flies a three-day rotation worth 15:45 that touches a listed holiday will receive 15:45 pay and credit, plus 5:15 pay, no credit*
- Holiday Pay is due regardless if there is a duty period on the holiday, or whether pilot operates or deadheads on a flight
 - *Example: A three day rotation begins the July 3rd, with a 30 hour layover during July 4th*
 - Holiday Pay is due regardless of the fact there was no duty on July 4th
- If a rotation touches more than one holiday, holiday pay will be paid for each holiday
 - *Example: A rotation that touches both Christmas Eve and Christmas Day will generate 10:30 pay, no credit in addition to any other form of pay for the rotation*
- If a pilot flies two separate rotations, each of which touch the same holiday, they will receive Holiday Pay on each rotation.
 - *Example: A pilot who releases from a redeye at the end of a rotation on the morning of July 4th and reports for another rotation the evening of July 4th will receive 5:15 pay, no credit for the holiday on each of the two rotations*
- If a rotation touches a holiday as a result of reroute, recovery, or late operations, holiday pay will be due
- Holiday Pay will not apply to the LCW in PBS
 - *Example: A three-day rotation worth 17:00 that touches a listed holiday will apply 17:00 toward the pilot's LCW but the pilot will receive 17:00 pay and credit, plus 5:15 pay, no credit for the rotation*
- Holiday Pay will not count toward a pilot's WS/YS pickup limit, nor toward a regular line holder's GS trigger

- Holiday Pay is not doubled if the rotation is flown by a regular line holder as a GS or IA
 - *Example: A regular line holder who is above the GS trigger and flies a three-day GS rotation worth 17:00 that touches a listed holiday will receive 34:00 pay, no credit, plus 5:15 pay, no credit for the rotation for a total of 39:15 pay, no credit*
- A pilot must be on the rotation on the holiday to receive Holiday Pay
 - *Example A: A pilot on a rotation that is entitled to Holiday Pay who calls in sick prior to the holiday will be credited the value of the rotation from their sick bank but will not receive Holiday Pay*
 - *Example B: A pilot who calls in sick for a rotation that is entitled to Holiday Pay after having flown on the holiday will retain all pay and credit for the portion of the rotation they have flown, plus the Holiday Pay, and will then be credited any remaining rotation guarantee from their sick bank*
 - *Example C: A pilot who is removed from a rotation for any reason (e.g., another pilot's OE, Company convenience, IROPS, etc.) that is entitled to Holiday Pay prior to the holiday will not receive Holiday Pay*
 - *Example D: A reserve pilot who is on long call or short call reserve during a holiday will not receive Holiday Pay if the pilot was not on a rotation*

Note that the holidays that generate Holiday Pay do not comprise all of the APD holiday periods listed in **Section 23 I. 10.**

ADG Carveout Pay (12 I. Exception)

A pilot on a rotation that releases from 0000 to 0159 will receive 2:00 pay, no credit in addition to all other pay due on the rotation.

- For a regular line holder, ADG Carveout Pay will not count toward the LCW in PBS and, for a reserve line holder, the 2:00 pay, no credit will be above the reserve guarantee.
 - *Example A: A 3-day rotation that releases on the third day at 2359 is worth 15:45 pay and credit. Due to reroute or late operations, the pilot is released at 0030 on the fourth day. The pilot will now receive 15:45 pay and credit, plus 2:00 pay, no credit for the rotation. If the release on the rotation is now further delayed to 0200, the pilot will receive 21:00 pay and credit (due to the additional ADG), and this will replace the 2:00 pay, no credit.*
 - *Example B: A 4-day rotation that was scheduled to release on the fourth day at 0030 is worth 15:45 pay/credit along with 2:00 pay/no credit. An early arrival leads to a release at 2355. Pilot is still due 2:00 pay, no credit, as the rotation was scheduled to release past midnight, but prior to 0200.*
- ADG Carveout Pay will not count toward a pilot's WS/YS pickup limit, nor toward a regular line holder's GS trigger.
- ADG Carveout Pay is not doubled if the rotation is flown by a regular line holder as a GS or IA.
 - *Example: A regular line holder who is above the GS trigger and flies a GS rotation that releases on the fourth day at 0030 and is worth 17:00 will receive 34:00 pay, no credit, plus 2:00 pay, no credit for the rotation for a total of 36:00 pay, no credit. If this rotation is delayed or rerouted such that it now releases after 0159 on the fourth day, the pilot will receive a fourth day of ADG for a total of no less than 42:00 pay, no credit, just as they have in the past.*
- ADG Carveout Pay will apply toward a regular pilot's rotation guarantee.

Sit Pay (12 S.)

For all time spent between any two consecutive deadhead and/or flight segments within a duty period, a pilot will receive one minute of pay, no credit (in addition to all other pay) for every two minutes, measured from the scheduled block-in to block-out times, in excess of two hours.

- For a regular line holder, Sit Pay will not count toward the LCW in PBS and, for a reserve line holder, Sit Pay will be above the reserve guarantee.
 - *Example: A duty period is scheduled for 3:30 from block-in to block-out of two consecutive flight segments. The time over two hours is 1:30 and provides 0:45 of Sit Pay. If the rotation paid 15:45 pay and credit, the total pay would be 16:30, 15:45 of pay and credit, plus :45 of pay, no credit.*

- Sit Pay is based upon scheduled and/or rerouted scheduled sit times. A late inbound arrival will not reduce Sit Pay, nor will a delayed outbound departure increase Sit Pay.
- Sit Pay will not count toward a pilot's WS/YS pickup limit, nor toward a regular line holder's GS trigger.
- Sit Pay will not be doubled if the rotation is flown by a regular line holder as a GS or IA.
- Sit Pay will apply toward a regular pilot's rotation guarantee.

Extended Duty Period (EDP) Pay (12 T.)

For un-augmented duty periods that extend beyond ten hours, a pilot will receive one minute pay, no credit (in addition to all other pay) for every one minute of duty time beyond ten hours. This pay will be calculated on the greater of scheduled or actual duty time for each duty period. At the same time, duty period credit (one for two and/or one for one-and-one-half) will stop accruing after ten hours on duty.

- A duty period will always end at least thirty minutes after the end of an FDP, as the duty period includes any trailing deadheads, ground transportation to another co-terminal airport, any additional duty assigned to the pilot, e.g., drug testing, and the 30-minute release
- For a regular line holder, EDP Pay will not count toward the Line Construction Window in PBS and, for a reserve line holder, EDP Pay will be above the reserve guarantee
- EDP Pay will not count toward a pilot's WS/YS pickup limit, nor toward a regular line holder's GS trigger
- EDP Pay will not be doubled if the rotation is flown by a regular line holder as a GS or IA
- EDP Pay will apply toward a regular pilot's rotation guarantee

Minimum Calendar Day (MCD) (12 U.)

A rotation that ***does not contain an ocean crossing*** will generate an MCD of 2:30 pay and credit or the pilot's flight time, whichever is greater, for each calendar day (measured in local time). MCD will apply for any calendar day on which a pilot either does not report for a duty period at all, e.g., a 30-hour layover, or reports for a duty period that contains less than 2:30 of flight time, either operating or deadheading.

Any MCD credit that is generated in a rotation will be added to the total flight time of that rotation. This total is then compared to the ADG and trip credit for the rotation. The greatest of these values will determine the pay and credit value of the rotation. For the purposes of calculation, the block time of a duty period will be counted in the calendar day in which the duty period began.

Example: A pilot has a four-day rotation as follows:

- *A Day: 7:00 block time*
- *B Day: 8:00 block time (of which 1:00 extends into C Day)*
- *C Day: no block time (other than the 1:00 from the last flight on B day)*
- *D Day: 7:00 block time*

This trip will generate 24:30 pay and credit (22:00 flight time for the duty periods that report on A, B, and D Days and 2:30 MCD for C Day). The 1 hour of block time on C Day is counted towards the B Day block time total as that was the calendar day in which the duty containing the block time began. If a regular line holder who is above the GS trigger flies this rotation as a GS, they will receive 49:00 pay, no credit.

- Because it is pay and credit, MCD will count toward the Line Construction Window in PBS for a regular line holder and will be applied toward the reserve guarantee for a reserve line holder
- MCD will count toward a pilot's WS/YS pickup limit, and toward a regular line holder's GS trigger
- MCD will be doubled if the rotation is flown by a regular line holder as a GS or IA
- MCD will apply toward a regular pilot's rotation guarantee

Rotation Construction Examples

Below are examples as to how these principles interact with each other to drive rotation pay. These examples are rotations with no ocean crossing segments.

Example #1:

Rotation Report: 1200 Release: 1630

	A Day	B Day	C Day
Scheduled Block / Minimum Calendar Day	7:00 / 0:00	0:00 / 2:30	7:00 / 0:00
Duty Period	12:00	0:00	11:30
Extended Duty Period (EDP) Pay	2:00	0:00	1:30
Sit Pay	0:45		

This rotation features two long duty periods, along with a 4:30 sit on the first day, and a 30+ layover on B Day. Pay and credit for the rotation is the sum of 14:00 of flight time on A and C Days plus 2:30 MCD for B Day, for a total of 16:30 pay and credit (ADG would have been 15:45). This is the amount that will be applied toward a regular line holder's Line Construction Window (LCW) in PBS and the amount that will be doubled if a regular line holder flies the rotation as a GS (assuming they have reached the GS trigger) or as an IA. For a reserve line holder, this is the amount that will be applied toward their reserve guarantee.

The 3:30 EDP Pay and 0:45 Sit Pay are pay, no credit (in addition to all other forms of pay). They will not be applied toward a regular line holder's LCW in PBS or doubled if a regular line holder flies the rotation as a GS (even if they have reached the GS trigger) or as an IA. For a reserve line holder, the 4:15 EDP and Sit Pay will be above their reserve guarantee.

In all, the rotation will generate 16:30 pay and credit, plus 4:15 pay, no credit, for a total of 20:45.

Example #2

Rotation Report: 1100

Scheduled Release: 2330 on B Day

Actual Release: 0100 on C Day

	A Day	B Day	C Day
Scheduled Block / Min Calendar Day	6:00 / 0:00	2:00 / 0:30	0:00 / 2:30
Duty Period	11:00	3:30	
Extended Duty Period (EDP) Pay	1:00	0:00	
Sit Pay	0:30		
ADG Carveout			2:00

This example is a two-day rotation, with a long duty period on the first day which includes a 4-hour sit, and one short leg with a late report on the second day.

As originally constructed, the rotation will generate an ADG of 10:30 pay and credit, plus 1:00 Extended Duty Period Pay and 0:30 Sit Pay, both pay, no credit, for a total of 12:00. However, due to late operations, the flight on B Day blocks in at 0030 on C Day, pushing the actual release into the next calendar day. Due to this, ADG Carveout of 2:00 pay, no credit is added to the rotation pay, plus MCD of 2:30 pay and credit for the new C Day. As a result of this, the rotation now pays 11:00 pay and credit, plus 1:00 Extended Duty Period Pay, 0:30 Sit Pay and 2:00 ADG Carveout Pay, for a total of 14:30.

Rotation Display Example

The example rotation below reflects the way a rotation's various pay treatments are displayed on a pilot's rotation in DBMS. Being pay and credit, MCD (which is generated by the lack of flight time on B Day) is shown on the same line as trip credit, DPA, and ADG, and is included in the Total Credit value of the rotation. This is the value that applies to the LCW in PBS, a pilot's WS/YS pickup limit, a regular

pilot's GS trigger, and a reserve pilot's reserve guarantee, and the value that will be doubled when a regular pilot flies the rotation as a GS/IA.

DAY	FLIGHT T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX		
A	2093	MSP 1016	VPS 1300		2.44	1.00	320 M				2	
		VPS 1400	MSP 1657		2.57	1.15					2	
	2538	MSP 1812	BIL 1926		2.14		M 11.10/13.00	11.10/12.30			2

		MSP 1032	BTB 1405		2.33	1.00	M				2	
	2062	BTB 1505	MSP 1655		2.50		M 10.27/12.00	10.27/11.30			2	
							7.21/ 9.00	.00CRD	7.21TL			
							2.30MCD	.00TRP	.00DPA	.00ADG		
TOTAL CREDIT		17.46TL	15.16BL		2.30CR	21.37FDP						TAFB 56.09
TOTAL PAY		20:23TL	.00SIT		2.37EDP	.00HOL						.00CARVE

Under **Section 12 L. 1.**, the rotation above will pay the greater of:

- Average Daily Guarantee (ADG) = 15:45
- Rotation (Trip) Credit = 16:03
- The sum, on a daily basis, of the greater of duty credit, duty period minimum, MCD, or flight time
= 7:55 + 2:30 + 7:21 = 17:46

The total credit for the rotation is 17:46, as flight time plus MCD is the highest of the three values.

Sit Pay, EDP Pay, Holiday Pay, and ADG Carveout pay are all pay, no credit. These values do not apply to the LCW in PBS, a pilot's WS/YS pickup limit, or a regular pilot's GS trigger. They pay above a reserve pilot's reserve guarantee, but are not doubled when a regular pilot flies the rotation as a GS/IA.

The sum of these values is added to the TOTAL CREDIT of a rotation to determine its TOTAL PAY. In the example above, the fact that the two duty periods are 11:40 and 10:57 in length, respectively, generates EDP Pay of 2:37 pay, no credit. This brings the TOTAL PAY of the rotation to 20:23.

Spillover Rotation Pay

When a rotation carries over from one bid period to the next, the pay for that rotation will usually be split among the two bid periods. You will be paid for the duty periods that begin in each respective bid period (measured in local time at the station of report) in that bid period. Any additional credit and/or pay, no credit items (e.g. Holiday Pay, etc.) that are applied to the last day of a rotation will be paid in the bid month of the last duty period of the rotation.

For example, consider the following rotation:

```

LAX    PILOT 350          *** ROTATION DBMS ***    20MAR/15:15 GMT

```

This rotation reports on 27FEB. The last duty period of the rotation reports on the first day of the March bid period (i.e. 02MAR SYD local time). Even though the crew reports on 01MAR pilot base time, all the pay for this duty period will be applied to the pilot's March time card, as shown in the time cards below. If the pilot holds a reserve line in March, this pay will be applied toward their reserve guarantee.

Standby Rotations (23 AA.)

The Company may proffer Standby Rotations at certain times. These rotations are a form of out of base short call reserve, built into a rotation which is biddable by both regular and reserve pilots. Available Standby Rotations appear in Reserve Open Time.

The Company may only offer Standby Rotations when a significant event is anticipated that triggers “double 23K,” which requires ticket change fee waivers for customers and a Critical Ops Update to be published by the Company. These rotations are completely voluntary and may not be utilized by the Company at any time that “double 23k” is not in effect.

The short call periods within a Standby Rotation will not count as short call credits for a reserve pilot, nor will the pilot be due any additional pay if not used during one or more of the short call periods in a Standby Rotation.

Construction

Standby Rotations must be three to five days in length for narrowbodies, and three to six days in length for widebody categories. The first and last days will be scheduled as deadhead days, and the intervening days will be scheduled with nine-hour short call periods that are pre-designated when the rotations are constructed. The pilot will sit the short call periods in the base designated by the standby rotation.

Standby Rotations may only be created for those bases in which the aircraft’s position exists.

For example, an ATL330A standby rotation could only be built with short call periods in bases with existing 330A categories, currently NYC, DTW, MSP, or SEA. Standby rotations cannot be built for bases where the equipment does not have a base, currently SLC or LAX for the 330.

When a Standby Rotation is constructed for a co-terminal base, e.g., NYC, it will begin and end with deadheads to and from the co-terminal airport to which the pilot is expected to be promptly available. For the NYC base, this could be EWR, JFK, or LGA. For the LAX base, this could be LAX, ONT, SNA, BUR, or LGB.

The first day of a Standby Rotation will be scheduled as a deadhead-only day, and the last day will be scheduled as a deadhead-only day. The deadhead at the end of a Standby Rotation must be scheduled to return the pilot to their base as soon as possible after receiving ten hours of rest following the last scheduled short call period.

Awarding a Standby Rotation

Standby Rotations are **voluntary only**. They cannot be assigned to regular or reserve pilots in any fashion (not even as IAs) and may only be awarded via white slip, yellow slip, green slip, or green slip with conflict. A pilot may enter their WS, YS, GS, or GSWC request for a Standby Rotation, either by rotation number (Standby Rotation numbers will begin with the letter S) or by date range.

When entering a date range, the pilot will be prompted to review their rotation parameters, which will include the ability to designate any combination of flying rotations, VAS periods, or Standby Rotations for the award.

Please refer to the template below:

- Select either “Standby rotations only” or “Standby and non-standby rotations acceptable” on the PCS Rotation Parameters template (shown below)
 - Selecting “Standby rotations only” indicates that you want only a Standby Rotation and not a VAS or flying rotation in this date range
 - Selecting “Standby and non-standby rotations acceptable” indicates that you are willing to be awarded either a Standby Rotation or a flying rotation, but not a VAS rotation in this date range
- Selecting no boxes indicates that you want only a flying rotation

PCS Rotation Parameters

Check the items that apply to your rotation request.

☐ Acceptable rotation begin co-terminal cities:

☐ Maximum sit around time within any duty period is: : (hh:mm)

☐ Acceptable rotation end co-terminal cities:

☐ VAS rotations only

☐ VAS and Non-VAS rotations acceptable

☐ Standby rotations only

☐ Standby and non-standby rotations acceptable

☐ VAS and standby rotations only

☐ Exclude MAC rotations

☐ Exclude MED (Malaria Endemic Destination) rotations

☐ Volunteer for verification flight

☐ Minimum time from award to report: : (hhh:mm)

☐ Do not call me between: : E (hh:mm) and : E (hh:mm)

Operating a Standby Rotation

A pilot who has been awarded a Standby Rotation may deviate from the scheduled deadhead at the beginning of the rotation. However, they must arrive in the general area of their assigned short call prior to the start of the first short call. The option to inform Crew Scheduling that they will be unavailable for contact for the first two hours of the short call does not apply to a Standby Rotation.

The pilot will be provided a hotel at the airport to which they will be promptly available and will be reimbursed for any reasonable transportation expenses incurred when travelling between the hotel and a flying assignment. Once a pilot's reserve obligation is complete for the last short call period, they are released and may deviate from the scheduled deadhead at the end of the Standby Rotation.

While on a short call period within a Standby Rotation, a pilot must be promptly available for contact by the Company until the earlier of the end of their short call period or their departure to report for assigned flying and must be able to report promptly for that assigned flying. They will not be assigned flying without an attempted contact by the Company and will have no pre-release schedule check after flying within their Standby Rotation. (A reserve pilot who has been awarded a Standby Rotation that releases on an on-call day will have the normal pre-release schedule check obligation at the end of the Standby Rotation.)

A pilot on a Standby Rotation may be assigned flying under Section 23 O. 5., just ahead of in-base short call reserve pilots. When more than one pilot on a Standby Rotation is available, such flying will be assigned at the discretion of Crew Scheduling.

Each short call period within a Standby Rotation will require a pre-report rest of ten hours. If the pilot is assigned, delayed, or rerouted into flying that encroaches upon the required rest prior to the subsequent short call period, the pilot will resume their short call status after receiving the requisite ten hours of rest. While this may necessitate delaying the start of that next short call period, its end

time will remain unchanged.

The last day of the rotation may be used for a single flying leg that returns a pilot to their base rather than a DH back to base so long as that flying is assigned during one of the pilot's scheduled short call periods. Such an assignment would be a reroute, however, since the deadhead is being replaced with an operating leg, and the pilot would be due reroute pay under **Section 23 L. 4.** and possibly **23 L. 8.** or **9.**

Pay Treatment

A Standby Rotation will pay as any other rotation would -- ADG or as flown, whichever is greater.

- WS/YS award - pay and credit for the greater of ADG or the scheduled deadheads plus assigned flying
- GS/GSWC award - pay, no credit for regular or reserve pilots as appropriate.
 - If reserve pilot only has X-days on the short call days of the Standby Rotation and performs no flying, their GS will generate no premium pay
 - They may request to move an X-day to A Day of the Standby Rotation in order to receive premium pay for that day
 - Their interrupted X-days will be moved so as to begin nine hours after release from the Standby Rotation
- Holiday Pay - a pilot who operates a Standby Rotation over a holiday that is eligible for Holiday Pay will receive such pay, regardless of whether they perform flying on the Standby Rotation

Once flying is assigned to a pilot on a Standby Rotation, all reroute or rotation additional pay rules (EDP, Sit Pay, etc.) apply. If a pilot who has been assigned flying on their standby rotation is rerouted into other flying, reroute pay under **Section 23 L. 4.** will apply and the pilot may only be rerouted into one additional day, even if there are days remaining on their Standby Rotation (see examples below).

A pilot on a Standby Rotation can be rerouted (not scheduled) into one additional calendar day beyond the rotation's deadhead-only day, so long as the reroute does not pass through pilot's base after the end of the last short call day. The pilot would then be due reroute pay under **Sections 23 L. 4.** And **8.** Or **9.**, as applicable.

Example 1:

Date	10	11	12	13	14
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH
Assigned Flying		1130 - 2000			

This pilot was contacted for flying sometime after 0900 on the 11th. Upon release from their flying at 2000, they are at rest until 0900 on the 12th.

Example 2:

Date	10	11	12	13	14
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH
Assigned Flying		1130 Report	0100 Release		

This pilot was contacted for flying sometime after 0900 on the 11th. Upon release from their flying at 0100 on the 12th, they enter ten hours of rest and resume short call 1100-1800 on the 12th.

Example 3:

Date	10	11	12	13	14
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH
Assigned Flying		1130 Report	1300 Release		

This pilot was contacted for flying sometime after 0900 on the 11th. Upon release from their flying at 1300 on the 12th, they are at rest until 0900 on the 13th.

Example 4:

Date	10	11	12	13	14
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH
Assigned Flying		1130 Report	1300 Release		
Reroute		1130 Report	2000 Release		

This pilot was contacted for flying sometime after 0900 on the 11th. They are rerouted into different flying on both the 11th and the 12th. They will receive one-half pay, no credit for the added legs on the 11th and single pay, no credit for the added legs on the 12th, in addition to any other form of pay for the rotation. Upon release from their flying at 2000 on the 12th, they are at rest until 0900 on the 13th.

Example 5:

Date	10	11	12	13	14	15
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH	
Assigned Flying				1130 Report	1300 Release	

This pilot was contacted for flying sometime after 0900 on the 13th and assigned flying that includes a single leg back to their base on the 14th. The assignment to fly back to base instead of deadheading constitutes a reroute. The pilot will receive one-half pay, no credit for the leg on the 14th and any credit and additional pay due on the rotation, in addition to any other form of pay for the rotation.

If the flying leg is scheduled to block in more than four hours after the scheduled deadhead:

- A regular line pilot will receive an additional single pay, no credit for the leg on the 14th and any credit and additional pay due on the rotation
- A reserve pilot for whom the 14th is an X-day due to having been awarded the Standby Rotation on a GS will receive an additional single pay, no credit for the leg on the 14th and any credit and additional pay due on the rotation
- A reserve pilot whom the 14th is an on-call day will receive no additional pay

Example 6:

Date	10	11	12	13	14	15
Standby Rotation	DH	RAP 0900 - 1800	RAP 0900 - 1800	RAP 0900 - 1800	DH	
Assigned Flying				1130 Report		
Rerouted Flying				1130 Report		0900 Release

This pilot was contacted for flying sometime after 0900 on the 13th and assigned flying that includes a single leg back to their base on the 14th. The pilot was then rerouted to release on the 15th, one day after their original release. The pilot will receive one-half pay, no credit for any flying on the 14th and single pay, no credit for their flying on the 15th and any credit and additional pay due on the rotation, in addition to any other form of pay for the rotation.

Because the reroute is scheduled to extend into an additional day:

- A regular line pilot will receive an additional single pay, no credit for any flying on the 14th and 15th and any credit and additional pay due on the rotation
- A reserve pilot for whom the 14th and/or 15th are X-days will receive an additional single pay, no credit for the value of the rotation on their X-day(s)
- A reserve pilot whom the 14th and 15th are on-call days will receive no additional pay

Trip Mix (12 R.)

- In a bid period (excluding June, July, and August), the total number of one-day and two-day rotations in the bid package in each 320, 73N, and 7ER category requiring at least 140 pilots under the PBS Staffing Formula in **Section 22 C.** will be at least 15% of the total number of non-ocean crossing rotations in that category's bid package
 - A rotation that contains as ocean crossing will not count toward the total number of rotations in the bid package
 - A rotation that operates on more than one date will count as many times as that rotation operates in the bid period
 - For example, assume a one-day rotation operates on 30 days of the bid period
 - That one-day rotation is considered to be 30 rotations for this purpose
 - Example:
 - The NYC 7ER B category requires more than 140 pilots under **Section 22 C.** for a the October bid period
 - Of the 427 rotations published in that bid period's bid package, 92 contain an ocean crossing and 335 do not contain an ocean crossing
 - Of the 335 rotations, a minimum of 15%, or 51 rotations must be one or two days in length
- In a bid period (excluding June, July, and August), the total number of five-day rotations in the bid package in each 717, 220, 320, 73N, and 7ER category will be no more than 20% of the total number of non-ocean crossing rotations in that category's bid package
 - A rotation that operates on more than one date will count as many times as that rotation operates in the bid period
 - For example, assume a five-day rotation operates on four days of the bid period
 - That five-day rotation is considered to be four rotations for this purpose
 - Example:
 - The October bid package for the NYC 7ER B contains 427 rotations
 - 92 of the 427 rotations contain an ocean crossing and 335 of the 427 rotations do not contain an ocean crossing
 - Of the 335 rotations, a maximum of 20%, or 67 rotations, may be five days in length

Voluntary Airport Standby (VAS) Periods (23 EE.)

Voluntary Airport Standby (VAS) periods are a completely voluntary form of pilot availability for trip assignment. They are a pre-defined availability period that must be performed on the airport property.

General

VAS periods in the bid package and in Open Time, both regular and reserve, look similar to other rotations, but with a rotation number beginning with "V." Each is shown as a two-day rotation with a value of 5:15 pay and credit (plus 3:00 pay, no credit) and indicates the VAS period's airport report and release times. For example, rotation V016 below is a VAS period on October 20 from 0600 to 1200. It is shown as a two-day trip because the pilot can be assigned flying that would extend into the second day.

	3		4621-		07:00	03	14:18	15.53	15.57	FBI ABQ	

VAS periods are available to both reserve and regular pilots, and may be awarded via PBS, PCS, and manual trip coverage. **They may not be assigned under any circumstances.**

A VAS period may be up to six hours in length. A pilot on a VAS period must remain on the airport premises during the entire period and be available for contact and to report for an assigned rotation immediately. This means that a pilot's PWA and FAR FDP limits are based on and measured from the start time of a VAS, unlike a traditional short call period. A pilot's FDP begins at the VAS's scheduled report time.

Once on a pilot's line, a VAS rotation looks as shown below.

Flying assigned while on a VAS period **must be scheduled to depart** within the six-hour VAS period and must be scheduled to release when it transits the pilot's base, but no later than the second calendar day. It must originate from uncovered flight segment(s) which are not in open time and that are caused by IROPS, or open time that is being assigned under **Section 23 O. 18.** - reroute into open time less than

18 hours prior to report.

Once flying has been assigned to a pilot on a VAS period, their rotation looks as shown below. Although it does not show on the rotation, this pilot will receive 3:00 pay, no credit on their time card in addition to the value of the rotation itself.

END OF DISPLAY									

If a VAS pilot is available, they must be used, if legal, before a regular pilot currently flying is rerouted into flying that is not in open time. When rerouting into open time that is more than 18 hours prior to report (**Section 23 N.**), Crew Tracking is NOT permitted to use an available VAS pilot and must instead reroute a regular or reserve pilot into that open time. Within 18 hours prior to report of open time flying (**Section 23 O.**), Crew Tracking must use an available VAS pilot, if legal, before rerouting a regular or reserve pilot into that flying.

Because a pilot on a VAS period can be assigned up to two days of flying, a pilot must be available for flying on both days. As such, they may not be awarded a VAS period operating on the day prior to a rotation except as a GSWC, or a scheduled absence such as vacation, training, military leave, etc. A reserve pilot may be awarded a VAS period the day prior to an X-day or a golden X-day but must do so via the YS request to be first for flying on X-days.

However, a pilot who is scheduled for a VAS period MAY be awarded a subsequent rotation or VAS period on the day following the scheduled VAS period. Should the pilot then be assigned flying on their VAS period that conflicts with the awarded rotation, e.g., two days of flying, **the awarded rotation will be dropped with no pay.**

Awarding a VAS Period

VAS periods may be awarded in PBS during initial line awards or as a recovery slip (RS), white slip (WS), yellow slip (YS), green slip (GS), green slip with conflict (GSWC), or swap with the pot (SWP) via PCS and/or the manual steps of trip coverage or picked up from another pilot in the same category via the Pilot to Pilot Swap Board. As mentioned above, they may not be assigned under any circumstances.

VAS Period Awards in PBS

The Company may publish VAS periods in a category's bid package to be available for bidding and awarding in PBS to both regular and reserve pilots. PBS will award VAS periods in seniority order, regardless of the type of line for which the pilot is bidding.

For a regular line holder, an awarded VAS period will contribute 5:15 toward the pilot's LCW. They will receive the 3:00 pay, no credit in addition to the value of their awarded line. For a reserve pilot, an awarded VAS period will NOT prorate the pilot's allotment of X-days, will only be awarded on an on-call day, and will count 5:15 toward the pilot's reserve guarantee. The 3:00 pay, no credit will be paid in addition to their reserve guarantee.

VAS Period Awards from Open Time

The Company may also post available VAS periods in open time for a given category. Beyond-second-day VAS periods will be able to be awarded through the automated PCS system to **both regular and reserve pilots**. For VAS periods only, a reserve pilot will be eligible to be awarded a YS for a beyond-second-day VAS period to be awarded through the automated PCS system. As with any award, the PCS system will consider first RS requests in seniority order, then WS requests, YS requests, and finally SWP requests. If a VAS period remains (or becomes) available in open time for same-, next-, or second-day coverage, Crew Scheduling will manually award it via the trip coverage steps of **Section 23 N.** and **O.**

Slip Award Stipulations for VAS Periods

- A pilot may request a VAS period either by specific VAS rotation number or by a date range when the request is via a RS, WS, YS, GS, or GSWC. When using the date range option, the pilot must:
 - Enter a date range that is long enough to include both the date of the VAS period AND the day after, as they will be eligible to be assigned up to two days of flying on their VAS period, AND
 - Select either “VAS rotations only” or “VAS and Non-VAS rotations acceptable” on the PCS Rotation Parameters template (shown below)
 - Selecting “VAS rotations only” indicates that you want only a VAS rotation and not a Standby or flying rotation in this date range
 - Selecting “VAS and Non-VAS rotations acceptable” indicates that you are willing to be awarded either a VAS rotation or a flying rotation, but not a Standby Rotation in this date range
 - Selecting no boxes indicates that you want only a flying rotation

Example: A pilot who wishes to use the date range option to request a VAS period, but not a flying or Standby Rotation on the 19th of the month must enter a date range of 19-20 and select “VAS rotations only.”

PCS Rotation Parameters

Employee number:

Seniority number:

Check the items that apply to your rotation request.

☐ Acceptable rotation begin co-terminal cities:

☐ Maximum sit around time within any duty period is: : (hh:mm)

☐ Acceptable rotation end co-terminal cities:

☐ VAS rotations only

☐ VAS and Non-VAS rotations acceptable

☐ Standby rotations only

☐ Standby and non-standby rotations acceptable

☐ VAS and standby rotations only

☐ Exclude MAC rotations

☐ Exclude MED (Malaria Endemic Destination) rotations

☐ Volunteer for verification flight

☐ Minimum time from award to report: : (hhh:mm)

☐ Do not call me between: : E (hh:mm) and : E (hh:mm)

- To be awarded a VAS period on an RS, only the 5:15 pay and credit portion counts toward the “value” of the RS award. That is, a VAS period would only be awarded via a pilot’s RS if the 23 K. rotation were a one- or two-day rotation worth no more than 10:30 pay and credit.
- To be awarded a VAS period on a WS or YS, the 5:15 pay and credit portion cannot cause the pilot’s projection to exceed (or further exceed) their WS or YS pickup limit of ALV +15.
- A reserve pilot who wishes to have their YS considered for a VAS period on their last on-call day prior to an X-day must submit a YS for Flying on X-days, as they will be eligible to be assigned up to two days of flying on their VAS period. As with all YS awards, the X-day(s) interrupted by the VAS period and/or the flying performed on such VAS period will be forfeited.
- When awarding a VAS period on a YS, the reserve pilot will be considered within RUO, i.e., by RAW value and days-of-availability groupings. With respect to the latter, two-day pilots will be considered first, then three-day pilots, etc. After that, reserve pilots with only one day of availability and reserve pilots on X-days will be considered in seniority order.
- A reserve pilot who has performed a VAS period or portion thereof, will be credited with a short call credit, regardless of whether the pilot is assigned flying on their VAS period.
- GS requests for a VAS period will be considered in seniority order among both regular and reserve pilots. For a reserve pilot to be awarded a VAS period on their GS, the VAS period itself would either have to be on an X-day or awarded with less than 18 hours from initial attempted contact. If the VAS period, or any flying assigned thereto interrupts an X-day(s), the interrupted and remaining X-day(s) will be moved so as to begin nine or 13 hours after release from the VAS period or the associated flying, just as with any other reserve GS award.
- A regular pilot may be awarded a VAS period on their GSWC request, provided the VAS period is scheduled to operate the day prior to the conflicting regular line rotation.
- A pilot may be awarded a VAS period on their out-of-base WS or GS request. In such a case, the pilot would be considered to be based where the VAS period is scheduled to occur.

SWP Award Stipulations for VAS Periods

- A regular pilot may be awarded or drop a VAS period via a swap with the pot request.
- A SWP request for a VAS period must be entered using the specific rotation number of the VAS period. Entering a “wild card” swap request, e.g., *3 on a specified date, will only award a swap for a flying rotation.
- For purposes of the Reserves Available requirement, the VAS period is considered to be a two-day rotation. When swapping a rotation for a VAS period or vice versa, available reserves on both days of the VAS period rotation will be compared to available reserves on the days of the rotation.

Pilot to Pilot Swap Board Stipulations for VAS Periods

- A regular pilot may exchange their VAS period with another pilot for the other pilot’s rotation or different VAS period, or may give a VAS period to, or pick up from, the other pilot within the same category via the Pilot to Pilot Swap Board.
- The pilot(s) receiving the VAS period(s) must be available for both the day of the VAS period itself and the following day.

Dropping a VAS Period

A pilot who has been awarded a VAS period may drop it via an PD, APD, IVD, or PB Day request.

- For purposes of reserves required, the VAS period will be considered to be a two-day rotation.
- The drop request of a VAS period that has been denied due to a lack of available reserves will cause that VAS period to appear in Open Time as a Qualified Personal Drop.
- A pilot who is awarded a PB Day request to drop a VAS period will receive 8:15 pay and credit (the 3:00 pay, no credit converts to pay and credit).

Assigning Flying to Pilots on a VAS Period

A pilot may be assigned any flying on a VAS so long as that flying is scheduled to depart within the six-hour VAS period and is scheduled to release when it transits the pilot’s base, but no later than the second calendar day. It must originate from uncovered flight segment(s) which are not in open time and that are caused by IROPS, or open time that is being assigned under **Section 23 O. 18.**, reroute into open time less than 18 hours prior to report.

Flying may be placed on the pilot’s line prior to the start of their VAS period. So long as the pilot does not acknowledge the flying, Crew Scheduling remains responsible for contacting the pilot after the start of the VAS period to notify them of the flying assignment. If the pilot does acknowledge the flying prior to the start of the VAS period, they remain responsible for reporting to the airport at the start of the VAS period in the event that Crew Scheduling desires to change the flying assignment.

When assigning flying to a pilot on a VAS period, if there is more than one available pilot in the same category on a VAS period, such flying will be assigned as follows:

- Crew Scheduling will first attempt to assign the flying to the pilot whose VAS period began the earliest that day and who is legal for the flying rotation, regardless of seniority.
- If more than one pilot began their VAS periods at the same time, then the more junior pilot will be assigned the flying rotation, regardless of whether a regular or reserve pilot.
- In the following examples, assume the three pilots (listed in seniority order) are on VAS periods on a given day for the times listed and that flying.

- Example 1

Pilot A	0800 - 1400
Pilot B	0800 - 1400
Pilot C	1200 - 1800

Result: So long as pilots A and B are each legal for a flying assignment that is scheduled to depart between 0800 and 1400 (inclusive), pilot B (who is more junior) will be assigned the flying.

- Example 2

Pilot A	0800 - 1400
Pilot B	1200 - 1800
Pilot C	1200 - 1800

Result: So long as pilot A is legal for a flying assignment that is scheduled to depart between 1200 and 1400 (inclusive), they will be assigned the flying. If pilot A is not legal for the assignment, then pilot C (the more junior of pilots B and C) will be assigned the flying, so long as pilot C is legal.

VAS Period Pay

A pilot who performs a VAS period will receive 5:15 pay and credit or the value of the rotation flown, if any, plus 3:00 pay, no credit. For a regular line holder, only the 5:15 will count toward their LCW in PBS and/or their projection toward the GS trigger, the WS pickup limit, etc. For a reserve line holder, the 5:15 will be applied toward the reserve guarantee and the 3:00 will be paid in addition to the guarantee. Any flying assignment that spills into a second calendar day will generate an additional 3:00 pay, no credit, plus pay and credit for all assigned flying.

Example 1:

DAY	FLIGHT T	DEPARTS	ARRIVES	C BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX	
A	1656	DTW 0800	RSW 1048	2.48	1.12	739 M				2
		RSW 1200	DTW 1444	2.44			7.44/14.00	7.44/13.00		2
							5.32/ 9.00	.00CRD	5.32TL	
						.00MCD	.00TRP	.00DPA	.00ADG	
TOTAL CREDIT	5.32TL	5.32BL	.00CR	7.44FDP				TAFB	8.14	
TOTAL PAY	5:32TL	.00SIT	.00EDP	.00HOL	.00CARVE					

A pilot who operates this rotation on a VAS period will receive 5:32 pay and credit (the value of the rotation), plus 3:00 pay, no credit.

Example 2:

DAY	FLIGHT T	DEPARTS	ARRIVES	C BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX	
A	1756	DTW 1700	RSW 1948	2.48	1.12	739 M				2
		RSW 2100	DTW 2344	2.44			7.44/14.00	7.44/13.00		2
							5.32/ 9.00	.00CRD	5.32TL	
						2.30MCD	.00TRP	.00DPA	.00ADG	
TOTAL CREDIT	8.02TL	5.32BL	.00CR	7.44FDP				TAFB	8.14	
TOTAL PAY	10:02TL	.00SIT	.00EDP	.00HOL	2.00CARVE					

Because this rotation is scheduled to release on the second day but prior to 0200, it generates 2:30 pay and credit for MCD and 2:00 pay, no credit for ADG Carveout. A pilot who operates this rotation on a VAS period will receive 8:02 pay and credit plus 2:00 pay, no credit (the value of the rotation), plus 6:00 pay, no credit (for the two days of the VAS rotation).

Example 3:

DAY	FLIGHT T	DEPARTS	ARRIVES	C	BLK.	TURN	BLK/MAX	FDP/MAX	PWA	FDP/MAX	
A	2020	MSP 0740	RDU 1112	2.32	1.05	320 M					2

		RDU 12.49/EMBASSY	STE CRABTREE				6.06/	9.00	.00CRD	6.06TL	
B	1729	RDU 0710	MCO 0854	1.44	1.01	M					2
		MCO 0955	RDU 1137	1.42	1.01						2
	2992	RDU 1238	MSP 1425	2.47				9.15/12.00	9.15/11.30		2
							6.13/	9.00	.00CRD	6.13TL	
							.00MCD	.00TRP	.00DPA	.00ADG	
TOTAL CREDIT	12.19TL	12.19BL		.00CR	18.26FDP					TAFB	32.15
TOTAL PAY	12:19TL	.00SIT		.00EDP	.00HOL			.00CARVE			

A pilot who operates this rotation on a VAS period will receive 12:19 pay and credit (the value of the rotation), plus 6:00 pay, no credit (for the two days of the VAS rotation).

Normal premiums apply if a VAS is awarded as a GS, as well as any reroute premiums to assigned flying, as applicable, in addition to all other pay.

GS on a Regular Line

A regular pilot who is awarded a VAS period on their GS will receive 10:30 plus 3:00, all pay, no credit. The 3:00 pay, no credit per day portion of a VAS is not doubled.

- If they fly a one-day trip, they will receive double the value of their flying plus 3:00, all pay, no credit.
- If they fly a two-day trip, they will receive double the value of their flying plus 6:00, all pay, no credit.

GS on a Reserve Line

A reserve pilot who is awarded a VAS period on their GS will receive premium pay according to the circumstance:

- If the GS award is on an on-call day with less than 18 hours from first attempted contact or on an X-day and the pilot is assigned one day of flying or none at all, the pilot will receive 5:15 or the value of their flying plus 3:00, all pay, no credit above their guarantee.
- If the GS award is on an on-call day with less than 18 hours from first attempted contact or on an X-day and the pilot is assigned two days of flying, the pilot will receive the value of A Day of their flying plus 3:00, all pay, no credit above their guarantee and:
 - The value of B Day of their flying pay and credit toward their guarantee plus 3:00, pay, no credit above their guarantee if B Day is an on-call day, or
 - The value of B Day of their flying plus 3:00, all pay, no credit above their guarantee if B Day is an X-day.
- If the GS award interrupts an X-day(s), the interrupted X-day(s) and any remaining X-day in their scheduled X-day block will be moved so as to begin nine or 13 hours after the pilot's release from the VAS period or the associated flying, as with any other reserve GS.

GSWC on a Regular Line

A regular pilot who is awarded a VAS period on the GSWC will receive single pay, no credit for the applicable value of their VAS period and any associated flying plus single pay and credit for the removed rotation.

Notes

- A pilot will receive pay, no credit for any additional pay items, i.e., Holiday Pay, ADG Carveout Pay, Sit Pay, Extended Duty Period applicable to their VAS flying in addition to the pay outlined above.
- A pilot who operates a VAS period on a holiday that is eligible for Holiday Pay will receive such Holiday Pay, regardless of whether they are assigned to operate a rotation on such VAS period.

- If a pilot who is performing flying assigned while on a VAS period is rerouted, they will receive any applicable reroute pay in addition to any other form of pay for the VAS period and associated flying.
 - Such a reroute must be scheduled to release when it transits the pilot's base, but no later than the second calendar day of the rotation.
 - If the pilot must be rerouted beyond the second calendar day of the rotation due to circumstances beyond the control of the Company, i.e., weather along the pilot's route or departure or destination airport closed, the pilot will receive 3:00 pay, no credit for each day of the rotation in addition to any applicable reroute pay and other forms of pay for the flying rotation.

Airport Longitude Table

To determine the difference in longitude between two airports, use the following guidance:

- If both longitudes are West (W), simply subtract the smaller longitude from the larger
- If both longitudes are East (E), simply subtract the smaller longitude from the larger
- If one longitude is West (W) and the other is East (E), add the two together. If the result is less than 180, that is the difference. If it is greater than 180, subtract it from 360 to determine the difference.

MEMORY ITEM 4: Re-Routes and Extensions.....	312
MEMORY ITEM 5: FAR 117 & Irregular Operations (IROPs)	313
Keeping It Legal During Major IROPS	314

General

FAR 117 compliance is a joint responsibility between the Certificate Holder (Delta Air Lines) and the pilot. Delta is required to schedule you under FAR 117, and you are required to operate under the limitations of FAR 117. Automation helps Delta comply with FAR 117, but it doesn't catch everything. Mistakes happen and you must be able to recognize those mistakes because it's your certificate on the line. The FAA cannot take action against crew schedulers or trackers but can take action against you if you don't comply with FAR 117.

The Flight and Duty Time Limitations and Rest Requirement of this Scheduling Reference Handbook (SRH) and ALPA's FAR 117 Quick Reference Guide are both great resources to help you understand all the FAR 117 concepts you should be familiar with, including examples of how Delta implements FAR 117 and what makes a re-route (RR) legal (or not).

Flight Duty Period (FDP)—117.3

- Begins when you report for duty with the intent to fly.
- Ends when the parking brake is set after the last flying segment **with no further expectation to fly.** (*Understanding when an FDP ends is critical because if you accept additional flying after block-in without the required ten-hour prospective rest you are violating the FARs.*)

Rest—117.25

- Rest must be known and prospective in nature—you must “*know you are on rest to be considered at rest.*” (See examples below.)
- Measured from release (30 minutes after block-in) to report.
- You must have ten hours free of all duty and it must include a minimum of eight uninterrupted hours of sleep opportunity prior to starting an FDP or short call.
- All pilots (RES or REG) must have a 30-hour break in a rolling 168-hour period measured from the **start** of a flight duty period (FDP).
- Regular pilots on a scheduled off day are considered at rest unless they are performing duty for the Company.
- Reserve pilots are **only** at rest on X-days or when notified of designated rest.
 - RES will automatically be placed on rest **18-24** hours prior to a short call or rotation.
 - Crew Scheduling can designate 30 hours of rest at any time. They must notify you of the rest for it to be prospective.
 - A RES is automatically placed on rest **18** hours prior to a Golden X-day or other “hard non-fly” day (see PWA **Section 2 A. 132.** for list).
- A RES pilot can see their rest status in iCrew.

Reserve Availability Period (RAP)

- The term RAP technically refers to “Reserve Availability Period.” FAR 117 uses this term to account for duty time but not flight duty period time. This is an FAR term and has no impact on PWA definitions of reserve or regular pilot.
- Reserve—the time spent on short call before reporting for a rotation which begins an FDP is a RAP
- Delayed Reports for all pilots—the time spent between “pay/actual report” and “airport report” while at a hotel. On a rotation, you will see “pay report time,” “actual report time,” and “airport report time.” Your FDP starts at the airport report time. The time between “actual/pay report” and “airport report” is a RAP. Time spent during the **Section 23 K.** recovery window (six hours) is also considered a RAP.

FDP Extension

- Means an unforeseen operational circumstance or an unplanned event with insufficient duration to allow for adjustments to schedules. These can include un-forecast weather, equipment malfunction, or air traffic delay that is not reasonably expected.
- You cannot be re-routed (RR) into an extension. **The RR must not require an FDP extension to be considered legal at the time you are notified, NOT when Crew Tracking makes the changes to the rotation.** (**Section 23 L. 12.** is the controlling language, and FAR 117 requires it to be legal at the time of notification.)
 - If you were given a legal RR, as described above, and then delayed into an extension, that is not

considered a RR into an extension; you were *delayed* into an extension.

- An FDP extension requires your concurrence. If you decline the extension, you must notify Delta as soon as practicable and coordinate with Crew Tracking for schedule updates.

Flight Dispatch Release Acknowledgement (FDRA)

- By signing the FDRA, each pilot is stating they are fit for duty for that flight segment.
- If your fitness for duty changes any time after signing the FDRA (whether in an extension or not), you are required to notify Delta as soon as possible. If you are fatigued, expect to be placed into rest immediately.

Note: It is within the sole discretion of each individual pilot to decide in any given situation whether they are fit for duty and will remain on duty beyond their applicable (un-extended) FDP or duty period limit. A pilot's decision not to remain on duty beyond such limit will be accepted without challenge by Crew Tracking. (PWA **Section 12 G. 5.**)

Fatigue

- Fatigue means you are unable to perform any additional duty. You will immediately be placed in rest wherever you are. There is no provision to call in "pre-fatigued" meaning "I will fly to XXX but then I will be calling in fatigued." Fatigue is considered as of "right now." It is acceptable (encouraged) to send an ACARS message in route to advise that when you land you will be unable to continue.

Unfit for Duty

- Unfit for Duty means you are fit to fly the next leg but may be fatigued for a subsequent leg.

If you are unable to complete your scheduled FDP due to Fatigue or a Fitness for Duty issues, you must fill out a Fitness for Duty Report (FFDR) located on DeltaNet > Our Company > Flight Operations > Administration > Forms & Reports > Fitness for Duty Report within 48 hours. See PWA **Section 24 AA.** for details.

Delta Rotation Explanation

The Scheduling Committee has never seen an FDP error on a rotation in which the information is correct in terms of report and release. *The key, however, is accuracy of the information.* During the IROP in early April 2017, there were errors on rotations due to report/release times that had not been corrected. ***Accuracy of rotations is critical, as iCrew is the official record for duty and block time required by FAR 121 and 117.*** Having the automation back you up is critical to maintaining FAR 117 limitations. Simply stated, if your rotation does not accurately reflect what you actually did, the limitations on the rotation will not be correct.

DAY	FLT	T	DEPARTS	ARRIVES	C	BLK	M/U	TURN	M	BQP

PWA Limits (each pilot)
scheduled / MAX scheduled / PWA MAX
9.14/11.30/14.00
PWA 12 D.1 - scheduled to be 30 minutes less than max

FAR Limit (specific to each pilot, cumulative)
max un-extended / max extended / block limit
12.00/14.00/9.00

The PWA Limits (9.14/11.30/14.00) are determined using the charts in PWA **Section 12 D. 2.** and **3.**

- 9.14 represents the scheduled duty day (report to block-in) and will be updated as the duty day progresses in iCrew. The time is based on the last acclimated city time zone. The acclimated city will

remain the same as the start of the rotation unless you change theaters and meet the FAR requirements to “re-acclimate.”

- 11.30 represents the maximum scheduled duty period at the time the rotation is built. It will be 30 minutes less than the FAR maximum un-extended number. This is only considered at time of rotation build and not considered during re-routes.
 - o During RRs, tracking uses the FAR maximum un-extended time, not the PWA scheduled limit. This does allow an additional 30 minutes of duty time.
 - o Exceeding the PWA max scheduled limit DOES NOT represent an FAR extension.
- 14.00 represents the maximum extension allowed by the PWA

The FAR limits (12.00/14.00/9.00 above) are determined using the rules set forth in FAR 117.

- 12.00 represents the maximum flight duty period measured from report to block in for each pilot. It takes into account the last acclimated city time zone and block-in time zone.
 - o This number will be adjusted for each pilot depending on individual circumstances (e.g., RES short-call RAP)
 - o ***Exceeding this number by one minute is an extension***
 - There are no limits to the number of 1-30 minute extensions
 - An extension of more than 30 minutes, up to two hours, is only allowed once prior to a 30-hour break
 - Tracking cannot RR you into an extension. In this example, the RR must be at or under 12.00 at time of notification. It is an FAR violation to RR into the extension.
- 14.00 represents the maximum extension allowed for each pilot. This number will be customized for each pilot as required. For example, one pilot may have had a 45-minute extension the day prior which would limit their maximum extension to 30 minutes until they receive a 30-hour break.
- 9.00 represents the maximum block hours allowed during the FDP.
- “Last Acclimated City” is the time zone to use to determine the max FDP limit in **Section 12 D. 2. and 3.**, which is the same as FAR 117 Table B and C. Scheduled report time is stated in local time
- Pay Report Time and Actual Report Time represent the time that duty period begins and normally will be the same. If you are in delayed report situation, you will see a third comment added “Airport Report Time” which is the start of the FDP. While on an active rotation, the Pay & Actual report time represent the start of your RAP.

Specific Examples of How Delta and the FARs Interact

Example 1: A crew is scheduled to work from MIA-ATL and then deadhead (DH) to SDF and layover. Upon arrival at the gate of their DH flight, they realize there is no crew available to fly to SDF. Can they be re-routed (RR) to operate the flight to SDF instead of DH?

Answer: No, their FDP ended when they blocked-in to ATL with no further expectation to fly. If they accept the additional flight segment, they are in violation of FAR 117.25 (e) requiring a ten-hour rest prior to an FDP.

Example 2: A RES F/O is scheduled to DH from LGA-ATL and work a flight segment ATL-DTW and layover. After check-in, they receive a message to now work the LGA-ATL flight and then pick up the remainder of the rotation. Is this legal?

Answer: Yes. The pilot had an expectation to fly after the DH so working prior to the DH does not require any additional rest because it is all part of the same FDP.

Example 3: After arrival in MSP, the crew is in the terminal walking toward the exit of the airport for a scheduled layover. They receive a message (airport page, phone call, CNO message) to contact Crew Tracking. Crew Tracking informs them they have been re-routed to now work MSP-DTW and layover. The crew advises Crew Tracking their FDP has ended, however, Tracking explains they sent an ACARS message to the aircraft, and a CNO to their phones, therefore the FDP did not end when they arrived. No ACARS message was received nor were any messages to their phones (text, e-mail, VM). Is this RR legal?

Answer: No. Both the FARs and PWA **Section 23 L. 12.** require the RR to be legal at the time of

notification to the pilot—not when Tracking made the changes.

Example 4: A crew was inbound to LAX for a layover. When they contacted ramp for a gate assignment, they were advised to contact Crew Tracking. After completing all checklists and other required duty, they departed the aircraft for the terminal. Once in the terminal, they contact Crew Tracking who advises them they have been rerouted to now fly LAX-SFO and layover. Is this a legal RR?

Answer: Yes. While the crew had no expectation to fly after arrival, they were notified to contact Crew Tracking prior to setting the brake so there was an expectation of a change to their rotation prior to completing the flight segment.

Example 5: A crew is flying from MSP-DTW and expecting to layover in DTW. In the descent, an ACARS message arrives along with the required full rotation being sent to the printer. The crew sees it is a RR message but elects to ignore the RR and not send the acknowledgement since this is considered administrative in nature and the Delta FOM prohibits administrative duties after the top of descent. The crew sets the brakes, completes the shutdown checklist and then reviews the RR information. Has their FDP ended or can they be rerouted?

Answer: They can be rerouted. An ACARS message was received prior to setting the brakes. Once the ACARS message arrived, there was an expectation of a change to the rotation. The FDP does not end until there is no expectation to fly.

Example 6: A crew arrives at the hotel with a planned layover of 21:00. Due to weather events the next day, their flight is canceled just prior to pick up. Crew Tracking advises them they are to remain at the hotel and now depart ten hours later. Does this 31-hour layover create the 30-in-168 rest required under FAR 117?

Answer: NO. All rest must be prospective in nature; this crew did not know they were going to have a 31-hour rest period until after the rest period (layover) had already begun.

Example 7: A crew has a planned 29:50 layover in NRT. Due to favorable winds, they block in 45 minutes early (release is 30 minutes after arrival). Their rotation now shows a layover of 30:05. Does this 30:05 layover constitute a 30-in-168 rest?

Answer: Yes. The crew knew they were released with a 30:05 layover, therefore they knew they were going to be on rest for at least 30 hours. This “extended layover” does constitute a prospective 30-hour period free from all duty and therefore does create the 30-in-168 required rest.

Example 8: A crew in NYC is scheduled to fly JFK-SXM-JFK in a single duty period. The push back from JFK and taxi for 30 minutes and then return to the gate because of maintenance. The FDP does not end because there is an expectation to fly. After a lengthy delay, they depart for SXM. With the accumulated taxi time plus the block time in both directions, the crew would exceed the 9-hour block limit. To solve this problem, the Company plans the return flight with a maximum cost index to minimize block time. Is this legal?

Answer: Yes. However, the PIC must evaluate the flight plan and agree with the Dispatch release. The Company can choose to increase the speed to keep it legal. If the flight down included turbulence and you believe you cannot operate the return flight at the flight planned speed, you must request an appropriate change to the flight plan. IF the new flight plan times exceed the FAR maximums, the Company may choose to “flag stop” you in a city short of JFK for a crew change.

Report Time Changes

If you have any questions about report time changes prior to report (pick-up time changes) please refer to **Report Time Changes** in the SRH for a full explanation with examples. If the Company delays the report time you will see three comments on your rotation they are:

- Pay Report Time (start of duty—NOT FDP-RAP start time): this remark is always present

- Actual Report Time (same as above): this remark is always present
- Airport Report Time (starts your FDP): this remark only present with delayed reports.

Five FAR 117 “Memory Items” to Know

FAR 117 can be confusing, but learning how it applies could save you from costly mistakes, paperwork, and even certificate action. Being familiar with FAR 117 is essential, and the following are five “memory items” you should know:

- Accurate Rotations
- Flight Duty Periods (FDP)
- Required Rest
- Re-routes and Extensions
- FAR 117 & IROPS

MEMORY ITEM 1: Accurate Rotations

Your rotation must reflect what actually happened. FAR 117 contains a number of limits (e.g. cumulative FDP limits, block hour limits, etc.), and as long as the times on your rotation *accurately* reflect what you actually did, all of the limits will be accounted for by Delta’s scheduling software. Knowing the limits, or at least where to find them, is important, but ensuring the accuracy of the rotation times that are shown in iCrew is critically important

- If your actual release time is other than 30 minutes after your last working or DH flight, the rotation must reflect the time waiting at the airport before you are actually released. This will normally be indicated by a statement that shows “New Pay Release Time & New Actual Release Time”
- With Delta flight segments, the times (out/in) will normally be correct, though we recommend double-checking times for DHs on DCI or other airlines
- During IROPS, be particularly aware of the potential for inaccurate rotation updating when you have been left sitting at the airport for some duration without a flight assignment, and subsequently released to rest
 - If you are unable to contact Tracking or Crew Scheduling during a major IROP, you can send a message via the Crew Assist App with the actual release time and make sure they update the rotation appropriately
 - If you have an extended layover due to IROPS with a non-prospective 30-hour rest, make sure the rest is broken at least once to keep the layover from ‘growing’ into a 30-hour layover
- **Ultimately, make sure your rotation reflects your actual report and release times;** documenting your times with screenshots can be helpful, especially during IROPS

MEMORY ITEM 2: Flight Duty Period (FDP)

You should understand when your FDP begins and ends, and what counts toward that calculation. Here’s what you need to know:

- FDP begins when you report for duty with the intent to operate an aircraft
- A DH-only duty period is NOT an FDP (no intent to operate an aircraft)
- Your FDP ends at block in (when the parking brake is set at the gate after the last flying segment) **with no further expectation to fly**
 - Understanding when an **FDP ends** is CRITICAL because if you accept additional flying after block-in without the required 10-hour prospective rest you are violating the FARs
- If you have determined your FDP has ended, you cannot accept additional flying
 - For example, if you are standing on the sidewalk waiting for hotel transportation and Tracking calls you asking, “Where are you - you have been rerouted,” you cannot legally accept this, if you were not notified prior to block in

MEMORY ITEM 3: Required Rest

Rest requirements are outlined in FAR 117.25. Here’s what you need to know:

- Rest must be prospective in nature, meaning you must “know you are on rest to be considered at rest” (you must know the start and end time of a rest period)
- Prior to the start of an FDP, you **must have a minimum of ten hours of rest** including eight hours of uninterrupted sleep opportunity
- Rest is measured from **release** (30 minutes after block-in) to **report**; the 30-minute post flight period is not part of the FDP but is also not a part of your rest

- o Because of the 30-minute post-flight duty, there should **never be less than 10:30** between block-in and report time prior to the start of an FDP
- All pilots must have a 30-hour rest period in the previous 168-hour period measured from the **start** of a Flight Duty Period (FDP), though the rest can be on a layover as long as it is prospective (known ahead of time)
 - o REG pilot is always on rest unless performing duty for Delta
 - o RES pilot is **ONLY** on rest on an X-day, on a layover, or when they are assigned rest associated with 30/168, 18 hours prior to the start of a Short Call assignment, 18-24 prior to a rotation report, the nine hour free of duty after completion of training, etc.
 - o Without an assignment, a RES will be automatically released to rest 18 hours prior to the start of a “hard” non-fly day (Golden X-day, MLOA, PD, APD, IVD, VAC, JURY)
 - o During an IROP, make sure your rest period does not “grow” into 30 hours; your rotation must show a break in duty
 - If you didn’t start the layover with a 30-hour rest, any “growth” into a 30-hour rest does not meet the prospective requirement

MEMORY ITEM 4: Re-Routes and Extensions

Pilots should understand the basics of when a re-route or extension is legal and when it is not under FAR 117. There are several key points to understand:

You may not be re-routed (RR) into an extension

- Tracking may RR up to the **FAR un-extended limit** (**Section 12 D. 2.** (not to exceed 13 hours) & **12 D. 3.** Tables)
- When you received the RR, your **total time on duty** (first block of time on the PWA line on your rotation) must be scheduled to be **less than** the **un-extended FAR Duty limit** on your rotation (the line containing “Last Acclimated City & Rest Class”); the un-extended FAR limit is the first number on this line

PWA FDP/SKD MAX/ACT MAX	10.56/11.30/14.00
A- LAST ACCLIMATED CITY-ATL REST CLASS-	12.00/14.00/ 9.00

- If the RR is legal when assigned, as explained above, and there are subsequent delays that require an FDP extension, the RR is still considered legal because you were *delayed* into an extension, not *re-routed* into an extension
- On the PWA line, the SKD MAX line is only used for rotation construction; during a reroute, Tracking is allowed to schedule you up to the FAR un-extended limit for that duty period (to a maximum of 13 hours for an unaugmented FDP)

Notification of a RR

- **Section 23 L. 12.** of the PWA requires the RR to be legal at time of **notification** (when you receive the RR message via ACARS, phone call, ramp tower telling you to contact Tracking, Company personnel, etc.), **not** when Tracking completed the transaction or when it was sent to ACARS
- **Section 23 L. 13.** requires you to acknowledge a RR while airborne as soon as possible consistent with the FOM policy concerning administrative duties
- Crew Tracking may send you a RR right up to block in of your flight - we have seen occasions as late as one minute prior to block in
 - o When Crew Tracking decides to send a RR so close to the end of an FDP, they run the risk of the pilot not receiving the RR prior to block in and determining their FDP has ended prior to the RR
 - o **It is critical you understand when an FDP ends; if the aircraft has come to a stop at the gate, and you are not expecting further flying, the FDP has ended**

Extensions

- Extensions may be utilized due to an unforeseen operational circumstance or an unplanned event, which can include un-forecast weather, equipment malfunction or air traffic delay that is not reasonably expected

- The pilot in command should not make the decision on behalf of their crew. While FAR 117 only requires the PIC to agree to an extension, proper CRM suggests the PIC should discuss with the other crew member(s) their fitness for duty prior to accepting an extension
- A pilot is never required to accept an extension, and the decision should always be based on an evaluation of *your* fitness for duty

Proper Release time after a long sit at an airport

- If you find yourself released hours after your arrival, it is **imperative** the rotation reflects the proper release with a “new pay release new actual release” statement
- The example below shows how the proper release time is reflected after sitting around an airport for hours before being released to rest. Even though flight blocked in at 1014, the crew was not released until 1235. This is indicated by the statement highlight in the example. The statement indicates that the pilot’s actual release has been entered into the system.

MEMORY ITEM 5: FAR 117 & Irregular Operations (IROPs)

During IROPs with numerous reroutes, extended duty days, and flight operations into the early morning, we all want to keep the operation moving and take care of our passengers. But, if you find yourself operating at the end of a long duty period, please ensure you factor in your own fitness for duty into your operational decision-making process.

Note: FAR 117 requires an evaluation of your fitness for duty and fatigue for every flight segment, not just the last flight segment at the end of a long duty period.

Keeping It Legal During Major IROPS

In most IROPS situations, one or more of the following three scenarios are likely to present themselves:

1. You report for a rotation and your first flight segment is canceled
2. You have completed a flight segment(s), and your next flight segment canceled with no contact from the Company (in the middle of an FDP)
3. You are at the hotel, have no “flight assignment(s)” or your outbound flight was canceled and are unable to contact the Company

There is clear guidance regarding the first scenario, but the other two create serious issues that *pilots must understand to remain legal under FAR 117*. Below are each of the scenarios and how to stay “FAR legal” in each one.

Any of the times/recommendations/suggestions listed in Scenario 2 or 3 are merely suggestions and are not explicitly delineated in the PWA (for example, waiting on hold for 30 minutes). The discussion below tries to provide some guidance where there is none. Following the rest suggestions below will keep you FAR legal during severe IROPS.

Scenario 1—You report for rotation and your first flight segment has canceled

In this scenario, *Section 23 K. 1. c.* applies, and you are required to be immediately available for contact by Crew Scheduling for six hours after sign-in or until released by Crew Scheduling. ***Only Crew Scheduling or a chief pilot can release you from a rotation***—no one else. Crew Tracking may “release you to rest” but not from recovery obligations. You must be immediately available for recovery flying.

Your FDP begins at sign-in and ends at the completion of the six-hour recovery window if no recovery flying is assigned *or* at the end of the last flight segment with no further expectation to fly. If you have not been assigned recovery flying at the end of the six-hour window, you have no further obligation to be contactable and you are pay protected to the scheduled credit of the rotation. Remember they only have one opportunity for recovery with *limited* ability for a second recovery.

To stay FAR 117 compliant:

- The next legal opportunity to fly (WS/GS) is ten hours after the end of your recovery window since you completed an FDP.
- If you did not report, you must be promptly available for six hours beginning at your original sign-in time. The time spent during the six-hour window is considered a RAP and therefore your next opportunity to WS/GS would be ten hours after the recovery window ends.

Scenario 2—You have completed a flight segment(s), and your next flight segment canceled with no contact from the Company (in the middle of an FDP) and/or you have no further flying scheduled during that FDP

In this scenario, at some point you must comply with the rest requirements of FAR 117. To protect yourself from an FAR violation, you need to place yourself in rest. Under FAR 117, rest must be prospective in nature and have a defined start and finish. ***FAR 117 REQUIRES ten hours free of duty with at least eight hours of uninterrupted sleep opportunity prior to the start of an FDP.*** While “self-release” to rest is not specifically found in FAR 117, if the pilot and the certificate holder both agree on the start and end time of required rest, that would be consistent with FAR rest requirements.

FAR 117 prohibits a re-route (RR) into an extension. An extension occurs when your FDP exceeds the first number on your rotation display on the “FAR” line, for example, “A- Last Acclimated City- DTW Rest Class- 12.00/14.00/9.00.” In this example, a violation would occur if your FDP exceeds (even by one minute) and your current flying assignment is different than your original flight segments scheduled for the day (i.e., an RR).

If you are unable to contact anyone at Delta to determine what your next flight segment is, it is ALPA’s recommendation to accomplish the following to stay FAR 117 legal:

- When you are within 30 minutes of the un-extended limit, contact Crew Accommodations for a

hotel. Do not wait on hold for more than 30 minutes.

- If no contact is possible, contact the Pilot Support Center or utilize Roll Call, if activated. If all else fails, find your own hotel for yourself and crew. When you get to the hotel, determine when your rest begins and ends.
- Contact Crew Tracking, Crew Scheduling, Pilot Support Center, Duty Pilot, and/or your CPO if possible and notify them of the start and stop time of your rest period. If unable, leave a message with the Duty Pilot at **888-676-7737**. Another option is to utilize Roll Call, if activated, or send an email to Pilot Assist at PilotAssist@delta.com with the release/report.
- Turn off your phone for ten hours and rest. See below regarding what to do after your rest period ends.
- While waiting to get within 30 minutes of the un-extended FDP limit, if want, you can check your schedule in iCrew for updates.

Scenario 3—You are at the hotel, have no current “flight assignment(s)” or your outbound flight was canceled, and you are unable to contact the Company

Again, there is no PWA language for this situation; however, a thorough understanding of FAR 117 is critical. If you find yourself in the situation of being unable to contact Delta while on a layover, common sense must apply. You should not leave the hotel to report for duty at the airport. You should also not leave the hotel to return home without telling someone and receiving permission to do so. PWA **Section 8 E. 4.** explains the process to get permission through the VRU or by calling Crew Scheduling if you want to deviate DH. ALPA recommends you do not give up your hotel room until you have your next flight assignment. While waiting for your next flight assignment, if want, you can check your schedule in iCrew for updates.

You *must* plan your rest with a known start and stop time. Use the same steps delineated above to both determine your rest and notify Delta of your planned rest start and end time. Once you have completed 10 hours free of all duty, including eight hours of uninterrupted sleep opportunity, you begin a RAP. This is the time between the end of the rest period and the start of an FDP. Please see **Report Time Changes in the SRH** for a full explanation of delayed reports with examples. The [ALPA smartphone app](#) is very helpful with this exercise.

ALPA’s Recommendations to Stay FAR 117 Legal in all Scenarios

- At the end of your predetermined rest period, turn on the phone and wait for contact from Crew Tracking. If you want, check iCrew for updated information.
- FAR 117 provides for “delayed reports” called a RAP. Your RAP will begin at the end of your rest period. When Crew Tracking contacts you with a flight assignment, ***it is critical they reflect the start of the RAP*** (end of rest period). Make sure it is correctly notated on your rotation. The rotation must show a pay report time XX.XX/actual report time XX.XX, with another line added in saying airport report time XX.XX. The airport report time starts your FDP.
- If you see your schedule in iCrew and it does not reflect the proper “pay report time,” then it will be incumbent upon you to review the SRH to determine your maximum duty day. **The ALPA app can be helpful with these calculations.** See below for examples.
- Once you have reported, with a flight assignment, use ACARS or direct dial to Dispatch and get the proper release/report and RAP start time into iCrew.

The [ALPA app](#) has a FAR 117 calculator labeled FTDT US that is *very* easy to use when you are dealing with delayed reports. Below are screen shots that show examples of how easy it is to determine your maximum duty period. All you have to do is put in the start of the RAP (when rest ends), the airport report time and the appropriate information for augmented or un-augmented operations.

The term RAP technically refers to “Reserve Availability Period,” though the term is also used for delayed reports for all pilots that are on an active rotation. The process is the same and does not change a REG pilot into RES. Using the reserve RAP portion of the ALPA app is how to determine your maximum duty time.

In the example below, for an un-augmented operation, the rest ended at 07:30 and the airport report time was 11:40 with three flight segments. **In this example, the duty period must end by**

23:30 so your maximum FDP is 11:50 measured from the airport report time of 11:40.

In the next example, we are using an augmented operation based in MSP with no acclimation. All times must be converted to MSP local time, which in this example is 05:00 from GMT. The original report was 05:10 (MSP time) with an airport report of 10:05 (MSP time). In this example, the duty period must end by 01:40 so the max FDP is 15:35 measured from airport report time of 10:05. This app will show all times based on the acclimated city.

The ALPA app interface for 'Augmented Reserve Duty Period' is shown in two states: input and results.

 - Max Reserve Flight Duty Period: 20:30
 - Reserve Flight Duty Period: 05/24/24
 - Ends: 01:40

Final things to note during a severe IROP to ensure FAR 117 legality:

- All of the FAR 117 legalities are programed into iCrew.
- It is absolutely critical the correct times are on your rotation in order to back stop your personal calculations of duty time.
- During severe IROPS, a pilot has no obligation to hold for more than 30 minutes attempting to make contact with the company. Hang up and either wait for notification or go to the hotel at the end of your scheduled duty period. (See the flowchart under FOM 21.2)
- When severe IROPS begin, trying to use a rotation printed at sign-in is nearly impossible. You must use an updated rotation showing the pay report/actual report, and the airport report times.
- Using a hotel business center to print a new rotation is an option. If you have a smart phone, bookmark iCrew.delta.com - this is a direct link to iCrew without having to go through DeltaNet.
- To comply with FAR 117 duty times, carefully review and calculate your LATT times printed with the flight plan and given to you with your final paper work. You can double check the times using the ALPA app as described above.

Waiting on hold for hours is most likely a waste of time. Both Crew Tracking and Pilot Assist are 24/7/365 operations.

Theater and Acclimation

FAR Part 117 includes two fundamental concepts - theater and acclimation.

Important: “Theater,” in this context, is unrelated to Delta’s definition of theater and Delta’s theater qualification program.

The FARs define “theater” as “a geographical area in which the distance between a flight crew member’s flight duty period (FDP) departure point and arrival point differ by no more than 60 degrees longitude.” The FAA defines “FDP departure point” as the starting point of a series of FDPs.

What is a “Series of FDPs?”

The FAA further explains that an FDP will commence a new series of FDPs if any of these three triggers is met:

- It is the first FDP to take place after the pilot’s arrival in a theater to which they are not acclimated,
- It is the first FDP to take place after the pilot becomes acclimated to a new theater or reenters a theater to which they are already acclimated, or
- The pilot remains acclimated and receives 30 consecutive hours of rest.

An individual FDP begins when a flight crew member is required to report for duty and ends at **block-in of the last flight segment with no expectation to fly. Once you have blocked in, you cannot be re-routed into additional working flight segments without an FAR required rest period of at least ten hours.** At Delta Air Lines, a typical domestic rotation (no layover 30 hours or longer) contains one series of FDPs, while many international rotations contain more than one series of FDPs. A deadhead only duty period is not an FDP, by FAA definition.

A pilot is acclimated to an entire theater, and not to a specific time zone within that theater. A pilot will most often be acclimated to the theater that encompasses their home base when they begin a rotation. A pilot changes theater if the ending point of an FDP is more than 60 degrees of longitude from the FDP departure point for that series of FDPs.

Some examples illustrate the theater concept in the FAR:

- A pilot who reports for a series of FDPs in Boston and ends an FDP in San Diego does not change theater (BOS and SAN differ by less than 60 degrees of longitude).
- A pilot who reports for a series of FDPs in New York and ends an FDP in Keflavik, Iceland or Dakar, Senegal does not change theater (DKR and KEF are both less than 60 degrees of longitude from JFK).
- A pilot who reports for a series of FDPs in New York and ends an FDP in Shannon, Ireland, or Istanbul, Turkey, changes theater upon ending the FDP (SNN and IST are both more than 60 degrees longitude from JFK).
- An ATL pilot who reports for a series of FDPs in ATL and ends an FDP in Anchorage changes theater upon ending the FDP in ANC (ANC is more than 60 degrees from ATL).
- An LAX based pilot who reports for a series of FDPs in LAX, ends an FDP in ATL, has an 18-hour layover, and then ends their next FDP in ANC does not change theater (ATL and ANC are both less than 60 degrees of longitude from LAX, and the FDP departure point was LAX).
- An LAX based pilot who reports for a series of FDPs in LAX, ends an FDP in ATL, has a 48-hour layover, and then ends their next FDP in ANC does change theater (the FDP from ATL began a new series of FDPs because the layover was longer than 30 hours. The new FDP departure point was ATL, and ANC is more than 60 degrees from ATL).

A pilot must compare the longitude of the FDP end point to the longitude of the FDP departure point to determine if they are traveling to a different theater.

The FARs define “acclimated” as “a condition in which a pilot has been in a theater for 72 hours or has been given at least 36 consecutive hours free from duty.” A pilot remains acclimated to a theater until they meet the conditions to become acclimated to a new theater.

Which Time Zone Do I Use? (Look at your Rotation)

A pilot's FDP limits and flight time limits are determined from FAR Part 117.11 and Tables A, B and C of FAR Part 117. Tables A, B and C are based upon a specific local time. The simplest and most accurate way to ascertain a pilot's limitations and acclimation status is to refer to a **current copy of the rotation**. Pilots should enter Tables A, B and C using local time as follows:

- A pilot beginning a new series of FDPs who is acclimated to a theater encompassing that FDP starting point should use the local time of that FDP starting point.
Exception: If that FDP starting point is within 60 degrees longitude of their home base, they should use home base time.
- A pilot beginning a new series of FDPs who is not acclimated to a theater encompassing that FDP starting point should use the local time at the location where they most recently began a series of FDPs while acclimated to a theater encompassing the FDP starting point of that series.
- A pilot continuing a series of FDPs should use the local time at the location where they most recently began a series of FDPs while acclimated to a theater encompassing the FDP starting point of that series.

A pilot who is acclimated to their base when they report for a rotation and do not change theaters during the rotation will remain acclimated and continue to use the local time at their base to determine their limits throughout the rotation. A domestic category pilot is not likely to change theaters because none of the 48 contiguous states are separated by more than 60 degrees of longitude.

The FDP limitations in Tables B and C must be reduced by 30 minutes if the pilot is not acclimated to a theater that encompasses that individual FDP starting point.

FRMS Operation Specification A318, Authorization Number DALA-005 authorizes Delta to operate unaugmented and augmented flight operations under 117.13(b) and 117.17(b) to include deadhead transportation in the determination of a flight crew member's theater of acclimation. A pilot can only change theaters as a result of travel during a duty period. A pilot who travels more than 60 degrees of longitude while not on duty (e.g., for vacation) is not considered to have changed theaters.

Note: A pilot who is awarded an out-of-base rotation will be treated for FAR purposes as if they were based at that location through the end of that rotation.

Some examples will help illustrate the concepts:

Example 1: An LAX based pilot is acclimated to LAX when they report for a rotation. They fly LAX-JFK, are given a 10-hour rest period before reporting for duty at JFK, and then fly back to LAX.

Result: The two FDPs are contained in one series of FDPs. The pilot remains in the same theater, remains acclimated, and uses LAX local time to determine their flight time and FDP limits for both FDPs.

Example 2: An ATL based pilot is acclimated to ATL when they report for a rotation. They fly ATL to CDG, are given a 24-hour rest period before reporting for duty at CDG, and then fly back to ATL.

Result: The pilot uses ATL local time to determine the limits for the FDP from ATL to CDG. They change theater upon arrival in CDG because their FDP ended more than 60 degrees of longitude from ATL. Because the return FDP is the first FDP to occur after their arrival in a theater to which they are not acclimated, they begin a new series of FDPs from CDG. Because they are not acclimated to a theater that encompasses CDG (they have not been in the theater for 72 hours and have not received 36 continuous hours free from duty), they must use ATL local time to determine their FDP limits for the return FDP. They must also subtract 30 minutes from the applicable limits in Table C because they are not acclimated at CDG.

Example 3: A pilot flies more than 60 degrees longitude from their FDP departure point on one leg, but then flies another leg in the same FDP to a destination that is only 55 degrees from their FDP departure point.

Result: Because the FDP departure point and FDP arrival point are not more than 60 degrees apart, the pilot ends the FDP in the same theater as they started.

Example 4: A NYC based pilot is acclimated to NYC when they report for their rotation. They fly JFK to CDG, are given a 48-hour rest period, and then report for a subsequent FDP and fly CDG to LAX. After a 48-hour rest, they are scheduled to fly LAX to JFK to end their rotation.

Result: The pilot changes theater upon arrival in CDG. They become acclimated to the new theater after 36 consecutive hours free from duty. Their new theater (CDG plus/minus 60 degrees of longitude) encompasses several time zones, but not their pilot base. The pilot must use the local time at the point where they became acclimated (CDG local time) to determine the FDP limits for the subsequent FDP. Also, the subsequent FDP begins a new series of FDPs. The pilot changes theater again upon arrival in LAX. After 36 hours of rest, they become acclimated to their new theater (LAX plus/minus 60 degrees of longitude). Because their new theater encompasses their pilot base, they must use their pilot base time (NYC local time) to determine their flight time and FDP limits for the final FDP LAX to JFK. The final FDP also begins a new series of FDPs.

Example 5: A pilot is acclimated to ATL when they travel to China for vacation. They remain in China for a week and return to ATL.

Result: The pilot remains acclimated to ATL and does not change theater because the travel to China did not occur as part of an FDP.

Example 6: A pilot is scheduled to fly to a different theater as part of an FDP and be released from duty for 34 hours. However, due to an early arrival, they are free from duty for 36.5 hours.

Result: The pilot acclimates to the new theater.

Example 7: A pilot is scheduled to fly to a different theater as part of an FDP and be released from duty for 34 hours. They arrive in the new theater as scheduled. However, after 10 hours of rest they are notified that the scheduled departure time of their return flight has been delayed by three hours and their layover is extended to 37 hours.

Result: Because the pilot received 36 consecutive hours free from duty, the pilot becomes acclimated to the new theater.

Delta pilots who deviate from a scheduled deadhead segment(s) will be considered to have traveled as scheduled.

Consecutive Night Operations

FAR Part 117 does not permit the scheduling of FDPs that infringe upon more than three consecutive windows of circadian low (WOCLs; 0200-0559 pilot acclimated time). A pilot who is scheduled to fly in three consecutive WOCLs will not fly in the subsequent two consecutive WOCLs, other than as late operations.

Exception: A pilot who is scheduled to fly in three consecutive WOCLs and who is not scheduled to fly in the fourth consecutive WOCL may be awarded flying in the fifth consecutive WOCL if they request such duty.

A WOCL is considered to be infringed upon if any part of the FDP touches any part of the WOCL. For example, an FDP that reports at 0600 does not infringe upon the WOCL, but an FDP that reports at 0559 does infringe upon the WOCL. An FDP that releases at 0159 does not infringe upon the WOCL, but an FDP that releases at 0200 does infringe upon the WOCL.

Example 1: The Company intends to schedule a pilot for FDPs on four consecutive days that each have a report time of 0500 pilot acclimated time.

Result: That schedule is not permitted by FAR Part 117 because it infringes upon more than three consecutive WOCLs and the FDPs do not provide rest opportunities that meet the requirements to

extend the limit to five consecutive WOCLs.

Example 2: One of the FDPs from Example 1 is replaced by a deadhead only duty period.

Result: That schedule is permitted because a deadhead only duty period is not an FDP and no more than three consecutive WOCLs are infringed upon by an FDP.

Example 3: An ATL pilot is scheduled for back to back three-day trips to Europe.

Result: The schedule is permitted even though each trip has FDPs that infringe upon two consecutive WOCLs because the pilot is not on an FDP during a WOCL between the trips.

Example 4: A pilot's last flight segment blocks in at 0100, but is followed by a deadhead segment that blocks in at 0230.

Result: The FDP ends at block-in of the last flying segment. Thus, the duty infringes upon the WOCL, but the FDP does not. At Delta, this scenario will be treated as if the FDP did infringe upon the WOCL.

Fatigue Risk Management System (FRMS)

An FAA approved FRMS under Operation Specification A318 which can be used by a certificate holder to mitigate the effects of fatigue in its particular operations. The FRMS Authorization allows the certificate holder and its pilots to exceed specific provisions of FAR Part 117 because the certificate holder has proven to the FAA that the operation provides at least an equivalent level of safety against fatigue-related accidents or incidents. This is a data driven process and a systematic method used to continuously monitor and manage safety risks associated with fatigue related error.

To obtain approval for an FRMS, the certificate holder must gather scientific data to show the proposed operation will provide an equivalent level of safety. Each FRMS request will be tailored to the requesting certificate holders' operations.

The FAA may approve an FRMS that permits the certificate holder to exceed any of the provisions of FAR Part 117 to the extent that an equivalent level of safety against fatigue-related accidents or incidents is achieved. A certificate holder may request an FRMS for a very specific set of operations, or an FRMS that covers a broad range of operations.

DALA-001 (A350 4-Pilot Operations)

Delta has an approved FRMS for four-man operations on the Airbus 350. This FRMS increases the FAR FDP limit for designated operations and removes the block time limit with the following conditions:

- Max scheduled duty day= Report to release
- Max actual FDP = 20:30 (extendable to 22:30)
- No limit on block time
- Pre-rotation rest of at least 24 hours scheduled
- If an FRMS duty period follows a delayed or cancelled FRMS duty period the minimum break-in-duty is 10 hours.
- Layover rest minimum of 24 hours scheduled (48 hours for JNB)
- 56-hour, including three physiological nights, rest required upon return

Delta currently operates a number of flights under the FRMS. These flight segments must be approved on a case by case basis.

#P144 TH EFFECTIVE SEP. 28 ONLY CHECK-IN AT 20.55

- **FRMS max scheduled flight duty period limit (PWA):** This is the time from scheduled report to scheduled block-in. It is calculated as follows:
 - o 1:30 from scheduled report time to scheduled push, plus
 - o Scheduled Block time (i.e., 15:10 on A Day or 13:50 on D Day).
 - o Results in 16:40 on A Day and 15:20 on D Day.
- A pilot may give their concurrence to continue to the FRMS limit of 20.30, extendable to 22.30. However, a pilot will not be rerouted or required to remain on an FRMS FDP more than two hours beyond their **MAX scheduled limit (18:40 / 17:20 as shown above)**. A pilot's decision not to continue beyond this time for any reason will be accepted without question by Crew Tracking.

FAR Part 117 requires each pilot to report for an FDP rested and prepared to perform their assigned duties. It also requires that each individual pilot must certify their fitness for duty prior to each flight as part of the dispatch or flight release. At Delta, this means each pilot must sign the flight release to certify their fitness for duty.

Under FAR Part 117, a pilot is obligated to notify the Company if they are too fatigued to perform their assigned duties. Further, the certificate holder is prohibited from requiring a pilot to continue if the pilot has reported themselves too fatigued to continue the FDP.

DALA-002 (A330-200 Class 1 Bulk Cargo Crew Rest Facility)

Authorizes all A330-200 aircraft to operate under Table C (Flight Duty Period for Augmented Operations) Class 1 FDP limits. Though a Class 1 rest facility bunk must measure at least 78" x 30", Delta has demonstrated that the A330-200 tapered lower bunk (21" at the foot) provides equal or better rest than the rectangular upper bunk.

DALA-003 (In-Flight Rest for 3-Pilot Operations)

Authorizes Delta to use an alternative in-flight rest scheme (other than 117.17(c)(1)) when conducting 3-pilot augmented flights with flight duty periods less than 14 hours.

For all three pilot augmented flights flown under Table C (Flight Duty Period for Augmented Operations) with an approved crew rest facility, the following limitations apply:

- Break times can be calculated such that the Pilot Flying can take second or third break and be given at least one third of the available rest time, but not less than 1:45; and
- Allow the rest period for the PF to begin up to an hour earlier than the last half of the FDP.
- The Pilot Monitoring will continue to comply with the current Part 117.17(c)(2) requirements.

DALA-004 (A350 Class 1 Flight Crew Rest Facility)

Authorizes all A350-900 aircraft to operate under Table C (Flight Duty Period for Augmented Operations) and 4-pilot operational limits under DALA-001 with a Class 1 crew rest facility.

DALA-005 (Theater Acclimation)

Authorizes Delta to operate unaugmented and augmented flight operations under 117.13(b) and 117.17(b) to include deadhead transportation in the determination of a flight crew member's theater of acclimation.
